### Cincinnati.

#### TRADE MORE ACTIVE.

Trade has been more active the past few days and as some stocks did not arrive in large quantities, it kept some of the retailers on the anxious seat. Shipping business was very erratic, a good demand one day, hardly any the next. It seems as though 90 per cent of the orders from out of town would arrive after five o'clock in the afternoon and it takes considerable hustling to secure good stock with which to fill them. The market is pretty well supplied with American Beauty roses, while teas are a little scarce. Carnations are to be had in quantity, but there are too many splits in the lot. A good supply of bulbous stock, such as daffodils, tulips, freesias and Paper White narcissus is always available and miniature Dutch were added to the list the past week. Violets, both single and double, were in over supply all week, but this can be attributed to the demand which was anything but encouraging. There were enough sweet peas for all requirements. The same may be said of callas and Longiflorum lilies and on only one occasion there was not enough valley for all orders. Asparagus plumosus remains scarce, otherwise green goods of all kinds are in ample supply.

The bowling club met again Monday evening, February 28, and while there were no records smashed, still some very good scores were made. At the next meeting, March 14, the Cincinnati

Florists' Society will do the elegant and furnish the lunch, refreshments and cigars, and we look for another good attendance. There are certainly some good bowlers in our midst and we look forward to a few comers.

Gus Meier, of the Hyde Park Rose Co., is on the sick list and Miss Edith Kyrk of Avondale is also suffering with the grip, but she says that it will take something worse than that to put her out of business.

Albert McCullough, president of The J. M. McCullough's Sons Co., has returned from Florida and looks as though his little rest has done him a world of good.

Wm. Murphy is handling some of J. A. Peterson's Lilium longiflorum and also some fine tulips, hyacinths

and yellow narcissus from Gus Adrian's place.

The best single daffodils coming to this city are from the establishment of Weiland & Olinger at New Castle, Ind., and fetch topnotch prices.

J. T. Herdegen, of Aurora, Ind., was a caller on Friday and he took a nice lot of flowers home with him for a large funeral order.

E. G. Gillette is strong on choice American Beauty roses, which he is handling for the Heller Bros.' establishment.

Miss Anna Weiland, of Evanston, Ill., is visiting with her sister, Mrs. P. J. Olinger this week.

C. C. Murphy is cutting the finest snapdragon coming to this market at present.

## San Francisco.

## TRADE KEEPING UP WELL.

Business on the whole has kept up fairly well, although we are now in the lenten season. Flowers which have been very scarce, are now coming in great quantities and prices have taken a considerable drop; especially is this true of narcissi, violets, carnations, lilies, freesias, etc. Lily of the valley, tulips and roses are selling at fair prices. Adiantum and Asparagus plumosus have been quite scarce articles of late owing to damage by frost during January. Those growers who are able to heat their houses are now reaping the benefit that this shortage occasioned. Wild flowers and fruit blossoms have also made their appearance in the stores and are adding variety to the stock carried.

The first annual banquet was given by the Pacific Coast Horticultural Society, in the Palace hotel. President V. Matraia, acting as toastmaster, welcomed the members and guests of the society, after which they sat down to a menu as only the Palace hotel can furnish. After the inner man was satisfied, the toastmaster called upon a number of those present for speeches. Past President Plath gave a brief history of the society, its aims and what it had accomplished during the eight years it has been in existence. As state vice-president of the Society of American Florists, he also urged all those in the trade to become members of that society. R. W. McLellan, and P. Ferrari spoke for the growers. A. Rossi, C. Shellgrain, F. Shibley, A. Figoni for the retailers. D. MacRorie spoke about the future of the orchid, and F. Schlotzhauer about conditions and prices in the New York market. J. R. Atkinson and T. Taylor entertained those present with recitations and some amusing stories. An excellent string orchestra supplied music during the evening. There were quite a number of other speakers, in fact, so many that some of those present did not get home till next afternoon.

## NOTES.

At the last meeting of the Pacific Coast Horticultural Society the newly elected officers were installed by the retiring president, H. Plath, who had occupied the chair as president for over five years. Five new members were elected the same night, which brings the membership of the society to close on 100.

Another retailer has gone out of business; this time it is the Sievers Floral Co., who made an assignment to E. W. Gunther. The liabilities are \$4,500, with nominal assets.

Pelicano, Rossi & Co. are erecting a 6-story building on their lot on Powell street, the first floor of which will be occupied by this firm as a first-class retail store.

Dan MacRorie is reported to have bought 15 acres of land near Burlingame and will build six greenhouses during the summer to grow orchids for this market.

Visitors: R. Armstrong, Los Angeles; Dr. Parker, the orchid grower of Santa Cruz; Guy M. Reburn, representing Vaughan's Seed Store, Chicago.

P.

TRENTON, N. J.—John Morgan, Sr., who resides with a married daughter at Rusling street, and who was for many years assistant gardener at the state house, celebrated his seventy-ninth birthday anniversary February 10, surrounded by his own immediate family, and in a quiet, unostentatious manner. Mr. Morgan enjoys fairly good health and boasts that he can walk without the use of a cane.

## Headquarters for

## EASTER PLANTS

Prepare for Easter. From Whom Will We Purchase Our Easter Supplies?  
An Immense Stock of Choice Easter Plants Now Ready for Immediate Shipment.  
Blooming Easter Week or Before if Desired.

"From whom shall we purchase our Easter supply this season?" That seems to be the cry all over the country. "We have tried so many already. I know what I am going to do," some sensible man says. "I shall go back to Godfrey Aschmann. He is the best and most reliable man in the business. What he advertises he has and there is no bluff about it. I tell you his usual stock of Azaleas can't be beat, and the Lilies he has this spring are the finest I have ever seen. No wonder. He imports them direct from Japan. He has a friend in Japan who looks after his interests and sends him the cream of Japan's plants. He has enough to supply all, and I tell you no lie when I say that his other plants such as Hydrangeas, Cinerarias, Spireas, Ficus, Palms, Hyacinths, Tulips, Daffodils, Etc., are of such excellent quality that they will make a man's mouth water, and they are so remarkably cheap that we often wonder how he can do it."

## AZALEA INDICA

We are headquarters for these plants for the past twenty-five years. We make a specialty of importing large quantities of this so well known favorite Easter novelty. Grown for us in Ghent, Belgium, by an Azalea specialist. Have now three houses full of the choicest. Only well known American varieties are imported. They are planted in the fall, as soon as they arrive from Belgium, into 6, 7 and 8 in. pots, placed in greenhouses and kept cool during winter. They are now in excellent condition, covered with buds, just right for Easter.

Please bear in mind facts mostly unknown to some Azalea growers) that fully 30 to 40 per cent of the newly imported Azaleas in dormant state will lose their buds and foliage during the long transportation of the sea voyage and during winter up to Feb. 1 and have to be kept over for another year.

We only ship good stock and full of buds and flowers, and therefore you can't expect Azaleas at this time to be as big and as cheap as if you would buy them in dormant state in the fall.

What is the name of the best double pink Azalea? Mme. Van der Cruysen is the name. Originated by the well known Azalea specialist, Mr. Van der Cruysen of Belgium. Millions are raised every year and shipped into every part of the globe from Belgium. We have a big stock on hand of this well known variety. Every plant is as round as an apple, covered with buds, just right for Easter. Have all sizes, 75c. \$1.00, \$1.25, \$1.50, \$1.75 to \$2.00 each.

In large sizes we have the following varieties, full of buds: Bernard Andreas Alba, pure white; Niobe, double white; Helena Thielmann, pure light pink, very fine; Souv. Memoire de Van Houtte, very large flowers, double pink; Empress des Indes, large flowering, double variegated; Dr. Moore, double pink; Mme. Van der Cruysen, best of all the pink; Apollo, red; De Schryveriana, double, large, variegated. Price, \$1.50, \$2.00, \$2.50 to \$3.00.

In smaller sizes we have the following varieties, full of buds: Mme. Van der Cruysen pink; Deutsche Perle, pure double white; Verveneana, double variegated, one of the old standard varieties; Apollo, red; Simon Mardner, double pink; De Schryveriana, large double variegated; Empress des Indes, double variegated; Niobe, double white. Price, 60c, 75c, \$1.00, \$1.25 to \$1.50. Professor Wolters a well known variegated bright variety, at \$1.00, \$1.25 to \$1.50.

When we are out of one color we send the next similar color; also if we are out of the size ordered, we send the next size, either above or below the price mentioned.

Moonvines (Ipomoea Multiflora) best white Moonvine, for which we have a world wide reputation now ready. 2½ in. pots, \$5.10 per 100.

Begonia New Improved Erfordi, 5 in., \$2.00 per doz.; Begonia Flambeau, 5 in., \$2.00 per doz.

Spirea Gladstone. This variety, owing to the dry summer in Holland last year, is very scarce this Easter but we were fortunate enough to secure sufficient to fill our usual house, and the plants are now in fine condition, full of buds, just right for Easter. 6-7 in. pots, 75c to \$1.00 each.

Primula Obconica, 5 in. pots, \$2.00 to \$2.50 per doz.

Double Daffodils, Von Sion best yellow, 3 double-nosed bulbs in a 6 in. pot, \$2.50 per doz. pots.

Tulips, Murillo (double pink) 3 bulbs planted in a 4 in. pot, \$2.00 per doz. pots. Tournesol Tulips (double variegated), 3 bulbs in a 4 in. pot, \$1.50 per doz. pots; ready in bloom for Easter.

Hydrangea Otakasa, already forced into buds just right for Easter, 6-7 in. pots, 35c, 50c, 75c, \$1.00 to \$1.50 each.

Kentia Forsteriana, 6-7 in. pots, 35 40 50 in. high, perfect leaves, \$1.25 \$1.50 \$2.50 to \$3.00; 4 in., 20c. Kentia Belmoreana, 6 in., large stock, \$1.25 to \$1.50; 4 in., 20c to 25c; 3 in., 10c.

Ficus Elastica (Rubber), 5½ to 6 in. pots 25c to 30c.

If you would know the fairest sight your eyes can ever see.

Where the most perfect plants are grown, to Aschmann's come with me.

Why? Never since flowers began to bloom was such a glorious show.

Of all the best that florists need found in one place to grow.

The lilies are the very best yet seen on Easter day. Azaleas are whole sheets of flowers, perfect in every way.

The Araucarias matchless are, so are the ferns, all green.

With bulbs, and plumed Spirea, the best you've ever seen.

And Aschmann gives a challenge, let every florist hear.

For flowers or prices, either, no rival does he fear.

If you wish to gather dollars, like violets in the spring.

Then send your largest order, his plants the cash will bring.

## EASTER LILIES

Lilium Multiflorum, the genuine Japanese Easter Lily, directly imported by us. We have a friend in Japan who looks after our interests there. He picks out for us only the good, healthy ones, and marks them while they are growing, the 10-in. bulbs and therefore he ships us the cream of the plants of Japan. We have Lilies this year to burn; can supply, if nothing happens, every customer and others who want Lilies. 9 to 10 in. bulbs of Lilies were difficult to get from Japan last fall, but we were one of the fortunate ones to receive all the 9-10 in. Lilies (5,000) ordered last spring, 1909, from our grower in Japan. If you see them growing in our greenhouses, you must all admit they are "cracker-jacks"; we sell them cheap, too. Where other florists get 15c per bud, we only charge you 10c per bud for plants in 6 in. pots, having 5, 8, 10 and more buds to the plant. Plants under 5 buds, 12c per bud, 6 in. pots.

When ordering lilies a reasonable amount of other plants should be taken. We do not solicit orders for lilies alone.

Hyacinths, 4 best colors, King of the Blues Grand Maitre (light blue) La Grandesse (best white), Gertrude (best pink), 4 in. pots, \$12.00 per 100.

Asparagus Plumosus Nanus, 3 in., \$5.00 per 100 2½ in., 3c; 4 in., 10c. Asparagus Sprengeri, 3 in., large plants 7c; 4 in., 10c.

Cineraria Hyb. Grandiflora, H.F. Michell's new improved strain. Our plants of this strain are twice the size of those of other years, with perfect, large, green foliage. Some of the plants are almost as large as a bushel basket. 6 in. pots, 25c, 35c, 50c, 75c to \$1.00 each.

Areca Lutescens, 5 in. pots, three plants in a pot, 35c.

Whitmani Ferns, 7 in., 75c to \$1.00.

Neph. Amerpholli, 5½, 5½ to 6 in. pots 30c, 40c and 50c; 6 in., 60c to 75c.

Cocos Weddelliana, 3 in., 15c.

Ferns for Dishes, \$3.00 per 100.

Have an Immense Stock of Easter Plants.

This is our catalogue.

Please state if in or out of pots. All goods must travel at purchaser's risk only. Cash with order, please. No references will be investigated.

GODFREY ASCHMANN, 1012 W. Ontario St., Philadelphia, Pa.

**THE STORRS & HARRISON CO., Painesville, O.**

#### Cleveland.

##### ROSES SHORT.

There is an abundance of stock on hand of all varieties, with the exception of roses. These, especially in the shorter grades, for funeral work, are a little shy of the demand. Asparagus is still very scarce. Adiantum is more plentiful, and of good quality. Fancy and dagger ferns are keeping as good as expected. String smilax is selling quickly. Sweet peas are a little short in the stem. Carnations have been over plentiful during February. Lent and the extremely cold weather have not been conducive to good business. Callas and Easter lilies are becoming plentiful and meet with a good demand. Rubrum lilies do not seem to have a very good demand. Violets are selling well. Valley and orchids drag a little. A fine new lot of boxwood is now in.

##### NOTES.

All are cordially invited to attend the bowling matches at Schwartzberg's alleys, Sheriff street, opposite old Market house every Wednesday evening, between the wholesale and retail florists. Refreshments and a good time generally is assured to all.

Frank Friedley, of the J. M. Gasser Co., served a chicken dinner to about 20 of his florist friends on Sunday. A look through the greenhouses and a sociable game of cards made a very enjoyable time.

Westman & Getz, 5923 Euclid avenue, have the unusual distinction of being the only flower store in the city which does not open its doors for business on a Sunday.

The wife of John Leuschner, Rocky River, has been ill for some time.

C. B.

**SKIDELSKY & IRWIN CO., 1215 Betz Bldg., PHILADELPHIA, PA.**

Pittsburg.

Another week of sackcloth and ashes has gone by and the depression caused by Lent is felt very heavily throughout the country. Without the funeral work business would be at a standstill. The retail stores are crowded with fine stock of all kinds. A trip among the wholesalers finds them somewhat worse. Carnations seem to be suffering most of any stock coming in. Never before have the receipts of split carnations been so heavy as now. It is reported that some of the commission houses are delivering carnations on consignment to the retail stores. That tells pretty well the conditions here. The only things scarce are good green and long green.

**NOTES.**

John Foss, Etna, who has been in the hospital the past three months, has taken a turn for the worse, and may lose his arm. This is the result of a rose thorn.

The Florists' and Gardeners' Club held its monthly meeting March 1, in the Dutch room, Fort Pitt hotel.

W. Carney, of the J. B. Murdoch Co., has the sympathy of the trade in the loss of his father.

Frank Faulk, of Faulk Bros., is back at his business again after a long illness.

**Mary Tolman**

Deep flesh that does not fade in the strongest light; clean grower; rigid stem; perfectly formed flowers; good producer.

**GEO. M. EMMANS, Newton, N. J.**

Nashville.

The grim reaper has been very busy among the prominent citizens in this community recently. W. K. Phillips, a very wealthy man of West End avenue, died in Florida. There was an exquisite pall made by Geny Bros. for the funeral, also a pillow or cushion five feet long of lilies, carnations, lily of the valley, and fine American Beauty roses. Also a wreath three feet in diameter upon a stand five feet high, one-half of callas, roses and carnations and the other half of lavender sweet peas and lily of the valley. The base was very artistic with palm leaves, callas and roses rising from it. Gauze-like streamers of lavender and white gave an artistic finish. The veteran undertaker, W. R. Cornelius, who for nearly 50 years has done business in this city, also died and the numerous handsome florals testified to the high esteem in which he was held, every kind of design being used at his funeral. Another death was that of a prominent architect, G. W. Thompson, and his funeral was the occasion of a great trade in floral circles.

The recent state conference of the Daughters of the American revolution, held in this city on February 21-22, called for many complimentary flowers. The hall and the Centennial club were decorated with palms and the "Daughters" carried gorgeous bouquets, the gifts of admiring friends.

Violets are more plentiful. One of our experienced growers says it has been a very poor violet year, that early last fall they became "soft" and did not bloom satisfactorily, but are doing somewhat better now.

John Scott, of the W. H. Anderson Co., of Lebanon, was in the city recently, having come to deliver some florals ordered from Lebanon. Mr. Scott lately married Miss Kitty Sharples, for a number of years with the Joy Floral Co., and they are living

**W. W. COLES,**

**Kokomo, Ind**

now in Lebanon. Mr. Scott is with Mr. Anderson, who has a very nice range of houses in Lebanon and does a good local business with a growing up country trade.

Trumpet Majors and the narcissi are coming in now from the growers, but in a week or two more they will be plentiful outdoors, some being even now in bud. While there is an abundance of flowers, the roses are off crop and will come on just in time for the Easter trade. M. C. D.

GREENFIELD, MASS.—William Kennedy has been in poor health for some time.

BATTLE CREEK, MICH.—A call for the purpose of forming a sweet pea society sounds unusual for shopmen, but it was issued by M. W. Westbrook, as organizer of the Grand Trunk Horticultural society. This organization, originally formed in Port Huron, contains machinists and blacksmiths at the Grand Trunk locomotive shops, who believe in cultivating flowers and raising vegetables while off duty. A flower show will be given by the men, with valuable prizes and the sweet pea meeting held February 26, was one of the preliminaries.

## A New Fern NEPHROLEPIS GIATRASHI

—Cash, No C. O. D.—

JOS. H. CUNNINGHAM,

Delaware, O.

PITTSFIELD, MASS.—R. Engelman lost about 500 square feet of glass by the recent heavy snowstorm. Altogether the damage amounted to about \$250.

BISMARCK, N. D.—The Hoskins Floral Co. has ordered glass for two additional greenhouses. The remarkable success of the venture has called for expansion.

# WIZARD BRAND MANURES

Dried, screened and packed in bags of 100 lbs. each

## PULVERIZED SHEEP MANURE

Pure - Uniform - Reliable

A strong and quick acting manure highly recommended for carnations and chrysanthemums

## SHREDDED CATTLE MANURE

Easy to Handle and Apply

Stronger and better in every way than rough manure. Lasts much longer on the benches. Unequalled for mulching and feeding roses, liquid manuring and mixing with bench and potting soil. Used by all the largest growers.

Ask your supply man or write for circulars and prices.

The Pulverized Manure Co.,  
32 Union Stock Yards, CHICAGO

**D. D. JOHNSON CO., 64-66 Wabash Ave., CHICAGO-  
Manufacturers,****The Mastin Automatic Whitewash and Spraying Machine  
Is Reliable, Practical and Durable**The tank is made of galvanized sheet steel, and in brass.  
The pump is of brass throughout, simple and powerful.  
The mixing device keeps the contents of the tank well stirred up from  
start to finish.When the machine is filled to within six inches of the top, a few strokes  
of the pump will compress enough air in the tank to produce a continuous  
mist-like spray for 15 minutes.

All parts are made to gauge and may be had for repairs.

## Superior Crimped Invisible Carnation Staple

(PATENT APPLIED FOR.)

For repairing split carnations. 1000 for 50 cents  
Postpaid.

L. J. WAITE, 293 Main St., Springfield, Mass.

New Orleans.

A northwest wind with a frozen bone in its teeth which blew fiercely for two days kept growers, especially those with rather inadequate heating facilities, on the anxious bench, but finally all ended well. The monthly meeting of the Horticultural Society was slimly attended on this account and nothing important transpired. U. J. Virgin had a notable vase of lily of the valley of his own growing on the exhibition table and also Roman hyacinths and Paper Whites. The Metairie Ridge Nursery Co. had two nice vases of Ivory and Bridesmaid roses, while H. Doescher had 10 kinds of forcing cucumbers that looked good enough to eat, at least the members present must have thought so judging from the way they pocketed them when the meeting adjourned.

The nurserymen have had a good season, thousands of trees and palms having been planted. The market men are not very busy yet, the season being a little too cold to plant out tender plants, but the prospects are good. The lily question is of paramount importance to the growers at present. At time of writing Easter is just five weeks away and buds are not showing. When Easter comes about the middle of April four weeks will bring the buds to maturity, but it is a question whether four weeks is sufficient to develop them in March.

The carnival trade this year was the best in history. Every store keeper seemed to have all he could attend to and prices were top notch. U. J. Virgin had some fine table decorations and a lot of fine bouquets and corsage bunches. C. Eble did a land office business and handled lots of fine stock. Metairie Ridge Nursery Co. was strong on bouquets and plant decorations. P. A. Chopin and the Avenue Floral Co. were glad when

### Providence.

St. Valentine's day business was an inspiration. What with fair weather and good demand there was no lack of orders and consequent hustle. The list of orders ahead was not as large as usual, but the actual cash and telephone business done on that day surely made a record equal to the best Valentine's day in several years. Carnations met with a fair call, but roses went very well. It remained for violets to round out a surprising day's work. Not cheap stock, but good and fancy grades. At \$1 to \$1.40 per 100 they sold, each bunch being tidily set up and packed in special boxes, most of them with a "heart" suggestion. Business all over the town was good in these flowers. With reference to violets it would seem that the stores having the best call are those that do not make a practice of having or advertising special sales at short prices. One florist has built up a heavy demand by continually putting the best and regularly-priced violets before his public. Of course he keeps and sells the cheaper grades, but does not flaunt them continually in the eyes of his prospective customers. There are ways to do a strong business without declaring oneself the "cheapest place on earth." All flowers are plentiful and good, with wholesale figures gradually dropping to carnations two cents, violets 50 cents per 100, roses two to six cents for regulars.

## The Allied Trades

Descriptive particulars—with drawings or photographs, if possible—of any new apparatus or device which may prove helpful to the trade are solicited for this department.

### The Chambers Flathead Carnation Pins.

We have samples of the Chambers Flat Head carnation pins for mending split carnations. These are manufactured by C. P. Chambers, Toughkenamon, Pa., and the price they are offered at is so low that none would think of allowing carnations to remain "too wide open," as we heard it expressed recently, when by means of these useful little articles they can be repaired. It appears to be an excellent device and should command a ready sale. A brass mender is sent with each box of pins and full directions for use also go with each.

### Cement and Concrete Fence Posts.

The use of cement and concrete for farm structures of various kinds has been treated in a Farmers' Bulletin of the Department of Agriculture. A number of the experiment stations have undertaken the study of the use of these materials for special kinds of farm structures. A recent bulletin of the Colorado Experiment Station, by H. M. Bainer and H. B. Bonebright, reports a somewhat detailed study of the methods of making cement and concrete fence posts, and of the best forms, mixtures, reinforcements, wire fasteners, cost, and general practicality.

Cement and concrete posts are just beginning to be manufactured and used as substitutes for wood posts, but already there seems to be general agreement that such posts can readily be made with ordinary labor, and while the first cost is large the posts are long-lived and of good appearance. In the bulletin of the Colorado station referred to, a description is given of a form of home-made concrete mixer which greatly reduces the hand labor required and which is more economical and better adapted to the average farm purposes than the large patented concrete mixers. This mixer, which, it is believed, can be made by an ingenious farmer with little expense and work, is described as follows:

Two pieces of 4x6 form the sills. Upon these, two uprights about three feet high are fastened. A 1½-inch pipe passes through holes bored in the top of the uprights. Upon this pipe the mixing box is turned, and through the pipe the water is added to the mixture at the desired time. The water is poured in at the top of the upright pipe and flows down and out through holes which are drilled in the lower side of it. The other end of the pipe is closed by a wooden plug. The ends of the box are made of pieces of 2x8 bolted together. A hole bored in the center of each end forms the bearings. The sides of the box are made of 1-inch lumber and are simply nailed to the ends. One-half of the box is made so that it can be detached and lifted off when the mixer is to be filled or emptied. The detachable half is secured to the other half by means of strong hooks so placed that by slipping this half about an inch to one side all of the hooks are loosened at once. After it is in position the removable portion is held in place by means of a barn-door latch.

The driving gear is simple but very effective. It consists of the rim taken from the wheel of an old rubber-tire buggy. With the tire removed the grooved rim makes a very satisfactory

## Iron Rafter House

Here is an interior view of L. B. Codrington's rose house at Murray Hill, N. J. The photo was taken, looking toward the side, to show you how light—how extremely light—and still how thoroughly the roof is framed.

You can scarcely tell the eave plate from the angle iron purlins, it is so light.

This is a construction that you can absolutely depend on as being proof against high winds and heavy snows.

When you are ready to build, write us.

## The Standard Steam Trap

Has established a record far above that of any other trap for florists; being very simple, durable and easily taken care of.

Catalogues of the Trap, Duplex Gutter, and Standard Ventilating Machinery, mailed free upon application.

E. HIPPARD, Youngstown, O.

wheel upon which to run a ¾-inch rope belt. The belt is driven by a small sheave pulley which is fastened to the countershaft. A belt tightener is used upon the rope, and by using a very loose belt the tightener is made to act as a friction clutch. This particular mixer is driven by a 2-horse gasoline engine, which is belted to the countershaft. The engine runs continuously and the mixer is started and stopped by means of the belt tightener.

The operator first fills the mixer about half full of sand, gravel, and cement in the correct proportions. He next lowers the lid, which until this time has remained supported upon the hook. The lid is now pushed into place and the latch fastened. The supporting hook is next removed from the staple in the lid support. The machine is now ready to start, the clutch is thrown in, and the box revolves upon the pipe. When three or four turns have been made, water is poured

into the upright pipe until the desired amount has been added. By this time the concrete is thoroughly mixed. The clutch is loosened, the box stops revolving, the hoisting hook is hooked in the staple of the lid, the latch is loosened, and the lid raised to the top of the lid support by means of the counterweight and rope. Now, by slightly setting the clutch, the contents of the mixer are dumped into the box beneath. The operator of the machine may now refill the mixer, while the other workmen take care of the mixed material. In this way a large amount of material may be run through the machine and perfect mixing is guaranteed.

Many other systems of driving might have been used in place of the rope belt. The main gear of an old self-binder makes an excellent gear for a mixer. An old mower gear may also be put to good use in this connection. It is not necessary to have the mixer driven by an engine or horse power.

# EXTRA BENCH ROOM

At this time of the year the capacity of every greenhouse is taxed to its limit. **Bench Room** is the one important feature to consider. Remember how well our

## Shelf Brackets

will relieve this situation, and save time, trouble and room. The **Lightest, Strongest** and most **Durable** on the market. Made for 3-4 to 2-inch pipe.

Address Lock Box 623-C.

N. TONAWANDA, N. Y.

A crank may be attached and the machine turned by hand. Many men prefer turning such a machine to mixing the concrete with a shovel.

The experiments made by the Colorado station indicated that poured posts made from a mixture thin enough to pour from a pail or scoop almost like water are easier to make than tamped posts, but are somewhat more expensive on account of the number of molds and the time required. The poured posts were also a little over 25 per cent stronger than tamped posts of the same size, mixture, and reinforcement. They are also better able to withstand action of frost and alkali. It was found that while the commercial molds make a post which tapers from the base to the top, the most economical form of post is one which is as large at the ground line as at the base and tapers from the ground line to the top. The square or round post is equally strong in all directions, and is therefore to be preferred to the triangular post.

The reinforcement should be in proportion to the size of the post and the strength of the mixture, and should be strong, light, and rough enough to permit the mixture to adhere firmly to it. It should also be very rigid, with little or no tendency to spring or stretch. Two or more wires twisted together were found to make as satisfactory a reinforcement as could be obtained. The reinforcement should be placed in each corner of the post at a depth of from three-eighths to three-fourths of an inch from the surface. The posts should be cured in the shade for at least 60 days, being sprinkled daily during the first 30 days.

In experiments with concrete posts at the Cowra experiment farm of New South Wales the wires were tied to the posts by tying wires which passed through holes in the post two inches from the surface. These holes are made when the posts are molded by putting 1/4-inch rods through the sides and across the mold at the required distance apart. When the concrete sets, the rods are removed.

### Water Supply for a Nursery.

His Honor Judge Bray, sitting at the Brentford county court, December 17, gave judgment in the case relating to the charges for water supplied to Joseph Darby, a Twickenham nurseryman. His honor said that in a previous action the judge held that a person carrying on such a business as a florist must need more water than would be wanted for mere domestic purposes, and found for the defendant. On the second point—the alleged improper use of water—it was not disputed that there was an implied obligation not to intentionally or recklessly waste water, and that if it was proved there was such waste, the plaintiff was entitled by way of damages to deduct from the rate a sum equivalent to the said waste. He was satisfied that there had been an undue and reckless waste of water by the defendant, and he assessed the amount of damages at £16. He gave judgment accordingly.—London Gardeners' Chronicle, December 25, 1909.

## THE WEEK AT PEACEFUL VALLEY

By The Optimist.

### Funeral and Easter Work.

We have had three days of beautiful, sunny weather, and all the inmates of Peaceful Valley, including the plants, seem duly grateful. There is nothing like a long siege of cold, cloudy weather to make us appreciate the sunshine. A week of the same kind would greatly help all our Easter stock. For six consecutive days we have had considerable funeral work each day, ranging from \$2 sprays to a casket cover of violets. It was right here that the new violet, Rothschild, helped us out in great shape. From about 1,320 plants we picked, in the six days, more than 12,000 flowers—and it looks as though we could duplicate that number in the next week. Princess never would have given us half that number. We have no regrets at planting this variety. When it comes to quantity of salable flowers, produced steadily from September to April, there is no other that can trot in the same class. We find that except in case of tributes from organizations, or subscription pieces, there are few formal designs, or set pieces, wanted, the bulk of all our work consisting of sprays and wreaths. Just at present a very loosely arranged wreath is very popular.

### Carnations.

We never had better carnations than this winter, and are convinced that benching in early June is the method for us. As retailers we require good flowers as early as October 1, and we can not get them from late planted stock. Next year we shall discard Rose Pink Enchantress in favor of Winona, which is doing well with us. The Rose Pink is the poorest member of the highly respectable Enchantress family, and is becoming more dissolute each year. Our list for next season consists of Enchantress, White Enchantress, Victory and Winona, with a few May Day, Ruby, Viola Sinclair and Alma Ward. This early planting, I think, is the cause of the difficulty experienced the last year or two in getting sufficient good cuttings for

stock. A plant grown in the field until late August will give many more cuttings than one lifted six weeks earlier.

### What is Profit?

The retail flower business is usually spoken of as a 100 per cent business; that is to say, all flowers are supposed to retail for at least twice what they cost. As a very prim old maid once told me: "I know that the florist business is a very lucrative one." Now, these occasional little sermons of mine are intended, primarily, to make you think. The opinions expressed may be wrong, my vision may be weak, or perhaps I am cross-eyed, but if I can get you to use that think-trap of yours, for yourself, in your own way, then my object is accomplished.

Let us talk over this matter of profits a little, Messrs. Dealers and Retail Growers, and if the wholesale growers want to listen, it won't hurt them a little bit. We will drop all mention of that 100 per cent, if you please, and get down to net profits. First, of course, we must determine what a net profit really is. As I understand it, the net profit is what remains after paying all expenses of running the business, including (if a grower) 10 per cent for depreciation on the cost of greenhouses and a fair salary to the owner, if he gives his time to the business. As an example, we will suppose that you are doing a business of \$10,000 a year. If you are making 10 per cent clear profit on your business you will have \$1,000 a year to lay away or reinvest. This profit for 20 years would amount to \$20,000, which, with five per cent compound interest for that period will give you \$33,000 at the end of 20 years. Any florist who has not done as well as this, in proportion to the amount of business he has done and the length of time in business, has not made 10 per cent, and yet how many florists can claim to have done this?

There are many florists who have accumulated \$30,000 or upwards during their business lifetime, but prob-

**Spring  
Number  
Next Week.**

**Send Advs. Now.**

ably in most cases it was the result of advanced values in their real estate or of outside investments. Florists who have been in business for periods of from 20-40 years who can show a clear net profit of even five per cent are rare exceptions. If, after submitting your business to the simple test outlined above, you find that you are not making any real profit, there are two remedies to consider:

First, better management; second, better prices. The low price florist must do a large business to make even a bare living. Everything must be forced to the limit. Twice as much business means more than twice as much supervision, detail and annoyance. He must keep himself at high tension continually, with no vacations, always risking errors and broken promises, because he is too busy to give proper attention to each order. That is why he does not hold customers long, but is everlastingly seeking new ones. If my houses run east and west, and yours north and south, and if I practice early planting, and you don't—then I'm a better florist than you are, and, believing in the survival of the fittest, I will make low prices, until you "gitsicker'nhell" and quit. That won't do me any good, but just see what it does to you.

#### Cyclamens Injured.

ED. AMERICAN FLORIST:—

Enclosed under separate cover I am sending you two specimens of diseased cyclamens. This is our first experience with anything of the kind; we have, in fact, for a number of years grown first class stock on same bench and under same conditions of soil, only have grown this batch quite cool at night. Would you recommend trying these bulbs another season?

C. M. V.

The plants are so badly attacked with thrips and other insects that the growth is quite paralyzed and it is useless to expect anything from these plants this year. Nor could we advise keeping them over, for probably they will be attacked again, and we would prefer raising new stock and keeping it clean right from the start by fumigating regularly while the insects are small and few in number, thus never giving them a chance to get ahead.

G.

SAN DIEGO, CALIF.—Articles of incorporation of the San Diego Floral Association were filed February 18 in the office of the county clerk, Alfred D. Robinson, L. A. Blochman, S. M. Daley, Kate O. Sessions, Lyman J. Gage, Rodney Stokes and Mrs. F. P. White being named as directors. The purposes of the association, as stated in the articles of incorporation, are to promote knowledge of floriculture, and a larger appreciation of flowers; to encourage the science, art and practice of floriculture, horticulture and arboriculture, and the beautification of grounds about homes, schools and other public buildings. It is also the purpose of the organization to hold flower shows. The association has become widely known through gifts of flowers to those ill in hospitals, for the graves of the strangers who have died within the gates of the city, and the providing of decorations for all public gatherings.

## THE RETAIL TRADE

THE shoes, filled with shamrock, as illustrated on this page, are made of porcelain and have proved a very attractive and free selling St. Patrick's day novelty with the A. L. Randall Co., Chicago.

#### Plant Baskets.

SEE SUPPLEMENT WITH THIS ISSUE.

The near approach of Easter will turn retailers' attention towards plant baskets, these being always popular at this holiday. One of the principal things to keep in mind in this class of work is to create a good contrasting effect in the colors and shape of the foliage. A single plant, standing out distinctly from others, will have a better effect in a basket than three or four standing next to each other or grouped at the same level with ferns or other foliage plants, simply because it shows individuality and stands out in distinct contrast to the others around it. Light foliage like that of Pandanus Veitchi, standing out from and well above the flatter, deeper colored begonias, is especially good, as we have the dual contrast of form and color.

Hydrangeas are not likely to be over plentiful for Easter this year, as the date is too early for their full development, but Baby Rambler, Lady Gay, Crimson Rambler, Tausendschon and other rambler roses will be plentiful. Very beautiful effects can be

#### The Pyramid Centerpiece.

The pyramid centerpiece is particularly appropriate where jonquils, narcissus or spiral leaved flowers are to be used. Take a round, flat basket, mound it with moss to a moderate pyramid height, keeping in mind that the flowers will greatly accentuate the height. Then start on the lower edge with a triple row of green foliage of the lily-like leaf of the jonquil or narcissus, tulip or any other suitable spring flower. This lily-like foliage should be wired to a stout wire about seven inches in length to which the foliage is attached in clusters of about seven leaves to a wire and when put into the lower edge of basket should sweep prettily over its edge to a considerable extent, laying gracefully on the table. Different lengths of the lily-like leaves should be bunched together and, whether or not more than three rows of this cluster foliage are needed, depends upon how closely it is placed in the basket and the size of the latter.

Then wire the jonquils or whatever flower is being used in pretty clusters. Do not wire them with short stems, but leave a stem of considerable length, so that they will fall gracefully from the long wire to which they are attached. The number of rows of the flowers required depends upon the size of the basket. Continue this method of circling first with clusters of the green and then with clusters of the flowers until the center is reached.

PORCELAIN SHOES FILLED WITH SHAMROCK FOR ST. PATRICK'S DAY.

By A. L. Randall Co., Chicago.

obtained by using Lady Gay as a tall plant and filling in with Primula obconica, the all pink basket being a very popular one. All yellow again is pretty though it is more difficult to get suitable stock to fill with. Genistas, Golden Spur and other daffodils, jonquils and good yellow tulips are helps along this line, while the improved varieties of yellow hyacinths are also useful. The selection of ribbons and the manner of tying them has much to do with the success or otherwise of a basket and considerable practice is necessary before a decorator becomes proficient along this line.

On the center, as a sort of a crest, a contrasting flower could be used. Say for instance with the yellow jonquil, lily of the valley would make a pretty finish to an always popular combination of yellow and white. Or where white narcissi are used a center of purple hyacinths would be effective.

This pyramid centerpiece can be very effectively made with pink sweet peas, but when bunching care should be used in not getting the bunches heavy and even. They should be loose and uneven to make a graceful and effective centerpiece. Lily of the valley could be used to advantage with

BASKET WITH HYDRANGEA, PANDANUS AND RAMBLER ROSE.

these. But where lily of the valley is used for the crest or center, do not use any foliage of the lily of the valley—use the sweet pea foliage. A centerpiece of fine mignonette with a crest or center of violets is attractive and unique looking. Or violets used with lily of the valley. This piece, called the pyramid, is wonderfully effective, but everything depends upon the loose arrangement and sweeping lines on the table from which it should be built.

A. E. KLUNDER.

## THE ROSE.

### Cultural Notes.

At this season we find that a mulch for the roses is required to keep them going. Now that the sun is getting well advanced and more air can be put on the houses, the soil will soon become baked in spots, injuring many of the tender roots that are nearly or quite on the surface of the soil. Before applying a mulch the plants should be tied carefully and cleaned; also clean off all rubbish or any of the remaining mulches that may be washed around to the center or sides of the beds. After cleaning up the beds a mulch of half decomposed cow manure should be put on to the depth of about an inch, and it should be prepared or broken up as finely as possible for good results, leaving it loose on the beds; very often where the mulch is applied and then packed it forms a crust, excluding all air from the soil, which in turn is liable to bring down much good foliage, besides being injurious to the roots. After applying the mulch it should be covered with some fresh soil which will keep the mulch fresh for a much longer period. The soil will also prevent the fermenting manure from spoiling the foliage and flowers. Enough soil should be used to cover the mulch nicely, and it will be found later (when it comes to working over the mulch) that the soil mixed through the manure makes a much more satisfactory mulch than manure alone.

After mulching great care must be taken when watering. The great mistake many make (that are not familiar with the work) is to allow the bottoms of the beds to become too dry, especially where the heating pipes are very close to the bench bottoms. It is a good rule to use a little less manure on solid beds than on the benches unless the soil is of a sandy character that dries out rapidly. It is also a safe plan to leave a crack of air on at night for a week after mulching, otherwise the ammonia released from the manure may bring down some of the foliage. After the mulch has been on for a couple of weeks it should be gone over by hand and broken up finely on the surface. This loosens up the mulch, allowing air to reach the roots and at the same time destroys many weeds. Too much care cannot be used now in ventilating the rose houses and the steam or heat should be cut off as early in the morning as possible. Raise the vent sash gradually, causing no rapid fall or rise of the temperature when applying or reducing the air. Do not be afraid to leave air on the houses at night if

the thermometer is registering from 40° to 50° outside, as it will often do at this season.

The present is a good time to prune and start up the summer roses such as Kaiserin, or others that have been allowed to rest up during the winter months to be run especially for summer blooms. Kaiserin is one of the most popular roses for summer; also Pres. Carnot, and in certain sections several other varieties do equally as well. However, the pruning should be done now, and if the plants are on own roots they can be cut back hard, as they will usually break freely from the roots under the soil. On the other hand, where grafted plants are to be pruned, we have found them to do better if pruned back to two eyes or so of the past season's growth. If this should leave the plants rather tall and headroom is required it would be advisable to lay the plants down, tying them to a running wire stretched about a foot from the ground, a wire to each row running lengthwise the house. After pruning distribute the wood evenly over the wires and remove several inches of the old soil, disturbing the roots as little as possible and fill in around the plants with a compost of half soil and half manure, cow manure preferred. Before filling in with the mulch a liberal dressing of ground bone should be dusted over the beds. After the soil has been leveled off, give the plants a good watering and spray overhead daily. Keep the house at a night temperature of 45°, increasing it gradually to 60° at night, which should take three or four weeks to bring up to a normal temperature of 60°, allowing plenty of air at all times and using as little artificial heat as possible. Do not put off this work, as once the eyes are started a great many are broken off when handling the plants and go slow with the temperature. Let the roots get well started before the foliage, then the plants will come with good stems and good foliage. Do not let the beds become too dry at any time.

E.

### Roses in the South.

The days are visibly lengthening now and the plants are making a brave showing, throwing up strong bottom shoots. Water may be given a little more freely and a sharp lookout kept for thrips and red spider. The plants should be kept regularly tied up and all fallen and decayed leaves removed from the surface of the beds. Disbudding the strong shoots should also be attended to, going over them at least twice a week. A thick mulch of cow manure put on the beds now will help to keep the roots cool and prolong the period for cutting good flowers. This operation will be varied according to latitude. The month of March generally ushers in the spring crop of mildew and extra precaution must be taken to guard against it, especially with a hot water heating system. Give all the air possible and try and have the plants with the heavy leathery foliage which resists mildew to the utmost. Any coddling from now on must be avoided.

It is time now to look over the young stock, selecting the strongest plants and shifting them into 3-inch pots. Use a rather richer compost

than for the first potting, adding a liberal sprinkling of bone meal. The balance of the plants should be carefully weeded and the top surface loosened up with a thin pointed stick, and this should be done before watering or when the plants are well dried out. To do it after the plants have just been watered is detrimental instead of beneficial. A late batch of cuttings may yet be made, but lose no time.

WM. LEAR.

### New European Roses.

Marquise de Ganey (P. Guillot).—The largest hybrid tea rose; ample dark green foliage, vigorous, erect grower; bud very large, carried on a long fairly strong stem; flower enormous, double, cup-shaped, petals broad, fine silvery rose in color; fragrant. Cross between Liberty and La France, it retains the rigidity and form of Liberty, with much greater size, and the foliage of La France, of which it has certain characteristics and the freedom of bloom of both parents; an acquisition.

Louis Barbier (Barbier).—Pernetiana-Mme. Bérard Capucine Bicolore. Vigorous climber, shoots three to ten feet long, covered with flowers; blooms very early, in May; flowers semi-double, in clusters of two to six; petals coppery red, opening bright scarlet, exterior copper yellow, deeper at the base. New, striking color, as brilliant as Capucine Bicolore; leaves thick, shining, deep green; blooms during the summer, but not absolutely remontant.

Madame Portier-Durel (P. Guillot).—Hybrid of Wichuraiana. Very vigorous hardy plant; very long climbing branches, foliage shining purple, flowers on panicles, small, very double, very well shaped, snow white without other shading, pronounced odor of lily of the valley. First-class variety and a worthy companion of Dorothy Perkins.

Berthe Gaulis (Bernaix).—Hybrid tea, strong stems, large, long full buds, often solitary on strong upright stalks, a fine bright rose color, pure brilliant carmine lake. Flower very large, perfect, petals numerous. Very free blooming, adapted either for cut flowers or outdoor planting.

Crème Simon (P. Guillot).—Hybrid tea, vigorous plant with erect branches, plentiful foliage, shining dark green; flower creamy white, the center sometimes salmon brightened with carmine, very double, opening well, camellia shaped; delicate perfume—(Gold Medal).

Principal A. H. Pirie (Bernaix).—Hybrid tea, beautiful, very double flowers, opening freely and keeping well. Strong plant with good foliage. Stalks stiff, flowers silvery pink, cochineal in the center, petals alternately imbricated with the upper edges recurved.

Joseph Liger (Barbier).—Wichuraiana Irene Watts. Very floriferous, strong growing, flowers in panicles of 20 to 30 flowers, color delicately shaded canary yellow inside, bordered light rose, exterior petals cream white; flowers three to four inches in diameter.

Désiré Bergera (Barbier).—Wichuraiana Bengale Aurore. Climbing, vigorous and free blooming; flowers in clusters of two to six, very double, medium, fine coppery rose, and light copy red center.

Capucine Bicolore merits a greater popularity for its brilliant color and good effect in masses.

## WITH THE GROWERS

Poehlmann Bros. Co., Morton Grove, Ill.

Just where Poehlmann Bros. Co. will stop building it is difficult to say, for every time we visit this magnificent, up-to-date plant we find a number of new houses. Last year 26 were added, and already this year preparations are under way for eight more. Fifteen acres of additional land adjacent to Plant B have been purchased and the top soil is now being cut for composting. Of the nine new houses at Plant A erected last year eight 27x250 feet were planted to American Beauty roses, the ninth being used for sweet peas, these being now in full crop. In these houses the Garland truss system was used and has proven in every way satisfactory. They will probably be lengthened in the near future, though this has not yet been decided upon. Another smaller addition is the orchid section, where, under the care of a capable grower, some 4,000 cattleyas form the nucleus of what will eventually be a very large collection.

In the rose section the Beauties are not making a very big show just now. Some flowers are being cut, but a good many of the 61,000 plants grown have set buds and are now being mulched with cow manure and will be producing fine flowers for Easter. This feeding will be especially necessary should warm, bright weather ensue between this and Easter, as this is very trying to the plants. At Plant B all the roses are in splendid shape and it is impossible to say which is best. Killarney and White Killarney are certainly leaders, while My Maryland, Richmond and Bride and Bridesmaid are superb. Cardinal is grown here quite considerably and is flowering with great freedom now. The condition of the whole of this great range of houses leaves nothing to be desired. The plants are absolutely clean from all traces of insects or disease, and the young shoots they are throwing up are magnificent in every way. As indicative of the opinion of Poehlmann Bros. of the various teas, the following list of what are to be planted the coming season should be of interest:

### ROSES.

|                       |        |
|-----------------------|--------|
| White Killarney ..... | 70,000 |
| Killarney .....       | 67,500 |
| Richmond .....        | 42,500 |
| My Maryland .....     | 30,000 |
| Cardinal .....        | 10,000 |
| Perle .....           | 7,500  |

At present the idea is to cut out Bride and Bridesmaid entirely, though this may possibly be modified. Grafting has been going on some time, and the plants are here in all stages, some just worked, others ready to come out of the cases, and the earliest batches fine stock already. There are still large lots of manetti to graft, 95,000 having been potted in all. All the rest of the immense stock grown here will be own-root plants, and there are many thousands in all stages of development. My Maryland is already an established favorite here, and, like everyone else with whom we have spoken, Adolph Poehlmann says it has only to be kept going during the winter to be one of the best winter roses in existence. It must not

be allowed to check for want of heat or it will be a failure. An excellent feature here is the cement paths between the benches. They keep clean and are far better for the help than slopping around in mud as was always the case with the old soil or ash walks.

The Easter lilies are just now a grand sight and they will be increasingly attractive as Easter draws near. The main crop is of Giganteum, 22,000 of this variety having been potted November 1. This season there has been no question of retarding or forcing. The bulbs were potted and simply had to be kept going right from the start. Otherwise they would not have been on time. Usually one would expect the plants to be short if treated this way, that is, given heat before they had time to make roots, but that is not the case with them here, for they are practically all 30 inches to 40 inches high, with good stems and clean foliage throughout. A finer sight than these big houses all filled with healthy plants just ready to burst into bloom would be difficult to imagine.

In the carnation sections the usual fine condition prevails, and it is needless going over the same ground we have so often noted. As to varieties for reds Victory, Beacon and O. P. Bassett are most largely grown. White Perfection, White Enchantress and White Lawson are the principal whites. Lawson is grown for deep pink, Winsor and Winona for light and Enchantress, May Day and Mrs. Chas. Knopf in the Enchantress shades. May Day is thought very highly of here and will be planted

largely. Propagation, of course, is going on briskly as some 500,000 are needed annually, and these take quite a little looking up. Many are already potted with very large batches now in the sand. August Poehlmann speaks very highly of the Evergreen Brand Flower Fertilizer for carnations.

In addition to these some 500,000 chrysanthemum cuttings are propagated annually and some of the scarcer varieties are already in the sand. But April and May are the biggest months for chrysanthemum propagating, and it is then that the bulk of the plants will be rooted. Returning to the orchids we noted a very good scheme being carried out by A. K. Anderson, the grower here, for establishing weak and small plants. Flats are prepared about six inches wide, two deep and about a yard in length. Cocks are laid on the bottom and the plants secured in a line with the leads all pointing outwards. A crack or slit is left the entire length of the flat for the water to escape, and thus there is no fear of any part of the flat becoming soaked out or water logged. As they grow forward either new peat or additional flat room can be given and the excellent shoots the plants were making are evidence of the wisdom of the treatment. A fine batch of Cattleya Schroderæ in variety is now in flower here.

MANSFIELD, O.—Albert Helbrook, late of Columbus, is now with the Berno Floral Co.

POEHLMANN'S LILIES, THREE WEEKS BEFORE EASTER.

PORTION OF A HOUSE OF EASTER LILIES AT POEHLMANN BROS. CO., MORTON GROVE, ILL.

Photographed March 5, 1910. Three Weeks Before Easter. Night Temperature 50°.

#### Robert Craig Co., Philadelphia.

The Robert Craig Co.'s establishment, may be called the "Home of the Easter Flower," as everything that is grown for this annual spring festival is to be found here in quantity and although this season's date is one of the earliest, it appears to have made no difference as everything seems to be timed just right, all likely causes of delay having been anticipated and overcome. To the lover of flowers and whose business it is to handle them, there is no more inspiring sight than houses of well grown plants such as are to be seen here. One of the first things to catch the eye are the fine blocks of rambler roses, Lady Gay and Dorothy Perkins have several houses, the stock of both kinds being large and varied as to size. They have been trained in various shapes, such as globes, pyramids, fans and umbrellas, and there are many in the usual bush form. For so early in the season they are unusually well budded and at this writing, March 5, are for the most part just commencing to show color with a flower open here and there. The popularity of these pink rambles has relegated Crimson Rambler to the rear and there is but one house given to this old favorite. What there are, however, are fine. *Tausendschon*, with its lovely semi-double flowers, a most popular pink rambler, is also seen in quantity and in all sizes from 3 to 10-inch pots. No Easter stock is complete without a liberal selec-

tion of these varieties. A house of Liberty and Killarney in 6 to 8-inch pots, as well as another of Magna Charta, are filled with very well budded plants. Next in importance are the azaleas, a very superior lot of plants in a great variety of colors. Some superb specimens in the larger sizes are exceptionally well budded plants of Mme. Van der Cruyssen being very noticeable. There is also a fine assortment of small sizes, natural own root plants and grafted stock, especially for basket work.

The lilies are timed nicely and the houses of this true Easter flower are a pleasure to see. They are mostly in 6-inch pots, with a limited supply of pans, there not being so many of the larger sizes as usual. A large house of *Spirea Gladstone* with a few of the new pink was a very pretty sight, the masses of green flowers rising above the foliage just commencing to show a tinge of white. A house of genistas full of shapely plants with an occasional yellow spray showing from the many buds looked very promising. *Rhododendrons* filled a large house; all the popular varieties in various sizes very well budded were to be seen, and marked one of the features of the place. *Hydrangeas* are also grown in quantity one of the largest houses being filled with well budded plants. Lily of the valley in 6-7-inch pans will be ready for the select trade, there being a good demand for these at this time.

A block of closely flowered bou-

gainvillea, well shaped plants, in convenient sizes, just coming into color, was an interesting feature. A few plants of this beautiful flower are sure to draw attention in any retail stock. Hawthorn, double flowering almond, and *Azalea mollis* are seen in limited quantity. A few of these are necessary for customers who are looking for novelties or something different.

*Ficus pandurata* is now one of the staple foliage plants; notwithstanding the large quantity of stock plants on hand. Mr. Craig says they are not able to keep up with the demand and the assortment is confined to mostly small sizes. He says they hope to gain the coming summer, having added to the stock plants and will have a stock of all sizes in the fall. All kinds and sizes of the Boston fern family are offered in quantity as well as crotons for which latter the firm is noted, having the largest stock in the country. A house of dracenas, mostly *Massangeana*, presents a fine sight; these will be in great demand later on. Mention should also be made of the immense stocks of cyclamens and *Begonia Gloire de Lorraine* coming on for next season. One hundred thousand cyclamens are a good many for one firm to handle but they are here and all looking fine, as yet planted out on benches with plenty of room to spread out.

*Begonias*, 90,000, in 2 and 2½-inch pots, all leaf cuttings, many of them being grown for orders, were coming

along nicely. Thousands of these as well as cyclamens are sold in quantity lots to the trade for growing on. In order to provide room for handling the increased Easter trade the packing shed has been lengthened and doubled in size. In looking over the situation and the prospects judging from the early orders received. Mr. Craig said he thought the coming Easter trade of the country would be a record breaker. K.

#### Godfrey Aschmann, Philadelphia.

One of the busiest places at this busy time is that of Godfrey Aschmann at 1012 Ontario street, Philadelphia. In walking about this place one wonders how so much stock can be turned out in a season as is shipped from here. Both the United States and the Adams express companies call with empty wagons thrice a day and oftener in the busy seasons of Easter and Christmas. Azaleas are now the feature here, several houses of them, very fine plants in the popular quick selling sizes, all bushy, well budded plants of the best varieties with Mme. Van der Cruyssen leading. A house of Spirea Gladstone just right as to time and with splendid spikes of bloom and luxuriant foliage is one of the leaders. Cinerarias are a specialty and are very well done, the house 125 feet long, being a bewilderingment of color. These Mr. Aschmann says are among his best sellers.

Easter lilies, a fine lot, well flowered, a direct importation from Japan, were selling fast but not by themselves as, at the low price he offers, other things must go along. Hydrangeas are also well done. They are a splendid lot, fine bushy plants with fine heads of well-colored blooms. The bulbous stock is in fine shape, tulips, hyacinths and daffodils, all his own importation direct, so as to insure the best bulbs, looked to be timed just right. In addition to the Easter assortment there are large quantities of young stock crowding out from every conceivable place, edges of benches, hanging shelves and over doorways. In fact every inch of space is utilized for young plants, seedlings, cuttings, etc. Begonia Erfordii, Primula obconica, Ipomea noctiflora, Begonia Flambeau, ferns, etc., are all included. Kentias are also seen in quantity in the quick moving sizes and a quantity of rubber plants for which Mr. Aschmann always finds a market. Taken altogether, the stock as a whole is the best Mr. Aschmann says he has ever offered. K.

PEORIA, ILL.—H. C. Otto is building a greenhouse at 1422 North Glendale avenue.

ROCHESTER, N. Y.—At the monthly meeting of the Florists' Association March 4, the date of the annual banquet of the organization was set for March 14, at which time the executive committee of the Society of American Florists is to visit the city. The occasion of this visit is to plan for the national convention of the association, which is to be held in Rochester in August. On the executive committee is F. W. Vick, president of the local association.

## THE CARNATION.

### Carnations in the West.

The propagating still to be done should be attended to without delay as quickly as enough of the cuttings get into condition. If possible every cutting needed should be in the sand by March 15; after this date it will be much more difficult to root them, besides allowing so much shorter time to make a plant. Considerable stock can be worked up from any new seedling or scarce variety for a longer period than this, but the percentage of rooting will be much less and the plants undersized for the season's work. As soon as there is any let up in the severe weather, causing less heat to be used, extra caution must be used not to get the sand overwatered. The steady bottom heat underneath the propagating bed is what dries the sand out quickly and when there is a let up on this the sand will soon get sour, unless extra care is taken to prevent it becoming too wet. It is important that the rooted cuttings be got out of the sand as soon as they have sufficient roots, because, after root action has taken place, the growth becomes very rapid and in a short time the young plants are ruined.

The young plants now in pots or soil that have been potted or boxed from time to time during the past month or two will be growing rapidly by this time, many of them lengthening out their growth. These should

damage the young stock more quickly than to allow the fly to get down into the shoots.

The earliest propagated stock will need repotting into larger pots now, but do not attempt any repotting until the plants are established enough to need it. An overabundance of soil at the roots is detrimental to the young plants' well-being and, unless extra judgment is used in caring for them, stem rot will set in. The flowering plants should receive close attention to all their needs. Disbudding should be attended to frequently and regularly and, from this time forward, means removing considerable of the side shoots, all varieties producing quite a surplus of side growths with every main stem. The watering should be regularly attended to so that there is not any extremes either way. Plenty of ventilation is also very important to keep the growth healthy and the quality of the flowers good.

C. W. JOHNSON.

### The Trend of the Times.

A paper read by Albert M. Herr, Lancaster, Pa., at the monthly meeting of the Florists' Club of Philadelphia, March 1.

The trade papers have been full of carnations and Carnation Society matters for the past month, but they seem to be an inexhaustable subject, and I will try and not repeat too much of what has been said. There seems to be no diminishment in the number of promising novelties year after year; in fact, they seem to be

J. F. AMMANN, EDWARDSVILLE, ILL., AND HIS AUTOMOBILE.

be topped back as soon as they get into the proper condition. Those of the young plants that are well established should be treated to a cool temperature at all times. They require plenty of fresh air without direct draughts. Also see that they are kept a little on the dry side. It seems hardly necessary to warn against allowing the insect pests to get the upperhand, but this is a very important point, and I would urge every grower to fumigate regularly, whether the fly is visible or not, for there is nothing that will

increasing in number and wonderfully increasing in quality. Those of us who were in Pittsburg could not help but remark on this feature of the novelties exhibited there. Just what to expect from these novelties from a commercial point of view is a question for the future; no doubt many of them will prove a disappointment to either the originator or the buyer or both, but what a monotonous world this would be with no disappointments to make us properly appreciate our successes.

In my address at Pittsburg I recommended that a report be secured from a number of growers giving their experience with the introductions of the previous year, these reports to be sent to the secretary of the Carnation Society and published in pamphlet form each year. The society, or rather the committee, I appointed to take up the recommendations in this address, did not see fit to even bring this up for discussion. We can hardly ask the trade papers to take it up, but the various florists' clubs might have an experience meeting each January and discuss this matter of the preceding year's novelties, pro and con, the opinions of the commission man and the store man being quite as valuable as those of the grower. We can not expect to get as good results as the national society could, but, with a free interchange of opinion, we can buy the second year novelties with some assurance of success, and quite a number of the \$50 per 1,000 varieties would be hunting buyers at 50 cents per 1,000. Publicity of failures is needed and badly needed. Elbert Hubbard says: "Let each individual work toward the betterment of as many other individuals as he possibly can, and his financial reward will be money flowing into his pockets as naturally as water flows into a river." How many successes have you had among the novelties bought last season? Don't keep them to yourself. How many failures have you had among the novelties you bought last season? Tell us about them. Some one among us may be able to put you on the track of making this failure a success; if not, then neither you nor I want to plant it another season.

#### GUARANTEE TAGS.

Another point I tried to bring out and which was ignored by my committee was to have a tag attached to each bunch of flowers, giving the date they were cut and the grower's name on it. This in the course of time would be looked for and demanded by the final consumer as a guarantee of good faith. I would like to see a fresh flower law enacted on similar lines to the pure food law and believe that such a law properly enforced would treble the use of flowers. Not long ago I was in a store where a good looking vase of Enchantress was in the window. The clerk told me about half the blooms in this vase were flowers from Chicago and that they were three days old, the balance of the vase being fresh flowers from a local grower. Enchantress is not the best of keepers and we all know that the final consumer getting flowers from this vase was foreordained to disappointment. Let our carnations be sold under a guarantee by the retailer that they have been cut on a certain date, and add a little advice as to the best method of keeping, and many an occasional buyer will be turned into a regular customer. It is not so much the price of flowers that interferes with their sale as the fact that, in many cases, the buyer receives so little value for the money spent. Let the grower try and grow such varieties as are known to be good keepers, making this one of his first demands in buying a novelty; then let him grow them properly and tag them as previously suggested, and, in the

course of time, the man who does this will find himself on the high road to success, and the man who does not will be traveling in an opposite direction.

#### GOOD KEEPERS.

Enchantress and all of its sports can, if well grown, be turned out moderate keepers, but the careless grower wants to leave them alone. Pink Delight, Victory, White Perfection, all of the Lawson type, Winona and O. P. Bassett are all good keepers under ordinary culture, and it is this class of varieties that should be planted in quantity and some of the softer but perhaps more beautiful sorts be experimented with until you learn to handle them and turn out flowers that will give good satisfaction. Another point I tried to bring before the Carnation Society was our lack of

business methods and ideas. The retailer in our business is perhaps nearest in 1910 business methods, but he has much to learn; the commission man follows along about 1900 style and the grower is lagging back somewhere about 1850 style. Not that I know much about 1850 business methods, but it will do for a simile, and I believe is a correct one. We do not need cultural methods; we have them once a week in four trade papers, but we do sadly need business methods, and we need some one to come into our societies who has made a study of modern business and tell us something about this end of our work.

There is some money in carnation growing. In witness thereof just note the modern \$8-\$10,000 houses going up exclusively for carnations. The man who has the cash to pay for these

A RECENT EXHIBIT OF THE ART FLORAL CO., SAN FRANCISCO, CALIF.

structures is all right; the man who builds on credit will have many a weary year before his houses are paid for. I maintain that the modern carnation establishment can not produce carnations at a profit for less than a two cent average from September 1 to June 1. Keep records charging up every item of expense, interest, taxes, wear and tear and every item that goes into the production of carnation blooms and see if I am wrong. When you see retailers paying \$1,600 a year rental for their store, and wholesale establishments without number in all of the larger cities and the grower adding house after house, you naturally conclude each and every one is making money a la Rockefeller. Analyze the situation carefully and you will find a triumvirate competing haves. I am not up in business methods well enough to suggest a remedy, but I want to give this as an opinion, and that is there are entirely too many commission houses in the larger centers and the competition among them is getting to be a bit hard on the grower. The grower, the retail man, the commission man and the final consumer are all component parts of what is and ought to be an immense business. The healthy increase and life of that business needs the encouragement of each of these sections. Get together.

#### Joseph Streit.

##### PRES.-ELECT BUFFALO FLORISTS' CLUB.

Joseph Streit was born in the pretty town of Trier on the Mosel in Germany, February 16, 1876. While his parents were not engaged in the cultivation of flowers, Joseph always wanted to be among them. His parents apprenticed him with a grower of his town and after two or three years the spirit of unrest and want of more knowledge prevailed and he sailed for America, arriving here in November, 1892. After a few months with an uncle on the Hudson and a few more with a grower in the vicinity of One Hundred and Twenty-sixth street, New York, he started for Buffalo where he was employed by J. H. Rebstock for a time, then accepted the assistant superintendency of planting at the Pan American exposition from which he resigned to take charge of S. A. Anderson's greenhouses, where he has been engaged since April, 1902, and sending out as fine a lot of Begonia Gloire de Lorraine as the American market has seen and producing all the plants and bedding stock that S. A. Anderson has use for. Mr. Streit is young and what he has in store for floriculture in plant work is in its infancy as he is a deep thinker, a great reader and still does not forget the pleasures of the club and bowling team, being a regular attendant at each meeting. **BISON.**

**SELAH, WASH.**—The Selah Valley Nurseries have incorporated with a capital stock of \$5,000. The incorporators are Clarence B. Wood and A. C. E. Brown.

**NEW ROCHELLE, N. Y.**—W. S. Hitchcock Co. Inc., is making preparations for the opening of its new store at 370 Main street, which is now undergoing extensive alterations. A large conservatory and greenhouse are being built in the rear of the store.

## HALF HOUR CHAPTERS FOR FLOWER GROWERS

### Sweet Peas.

Where the vines of sweet peas have been flowering for some time and are getting weak and producing smaller flowers, it is time to think of replacing them with young clean stock, taking out a bench or a part of a bench at a time, according to requirements and quantity grown. To shorten the time between crops these seasonal plants should be raised in small pots and the benches cleared and replanted when these are ready.

Joseph Streit,

President-Elect Buffalo Florists' Club.

By these means very little time will be lost and there is plenty of time to raise flowers long before they can be had from outdoors. Two or three seeds should be sown in a 2-inch pot and the seedlings thinned to one, or two at most, when they are strong enough to insure their standing. It is important to see that the soil in these small pots does not sour, which it is apt to do unless the watering is judiciously done. A light, sandy mixture, with a little rough old manure or leaf soil in the bottom of the pots, is best. Those hustling growers who have no time to do this, and think it a waste of time, are they who lose most young plants by damping off in the early stages. If the soil on the benches has only grown one crop it will probably be good enough to grow another if turned up deeply and allowed to dry out for a couple of days and a little new soil added. Fresh manure is not advisable, just the ordinary composted soil as used for potting or benches. Get this all ready for planting by the time the young stock is ready, then there will be no fear of the plants becoming starved or rootbound. Plant firmly and water each plant carefully after planting. This watering will keep all right for a few days if light spraying is given and the surface soil lightly scratched over to prevent too rapid loss of

moisture. When established the same treatment as given the flowering vines will be necessary, except that much more care is needed in watering until the first flowers are set.

### Annuals Indoors.

Where the plants of annuals, such as marigold, aster, cornflower and sweet sultan, are growing freely the principal attention necessary is to keep the surface soil moving, to avoid overwatering the roots and to watch carefully for insects so that these do not get a foothold. Although in the earlier stages an attack of green fly may appear to be a very insignificant matter and easily overcome, if allowed to go on it simply means ruin to the plants. The insects by sucking the juices of the plants sap their life blood and leave only a crippled specimen that can produce nothing but weak, undersized flowers and is a discredit to any grower. Consequently, just as soon as the first aphid or other insect is seen, fumigation, spraying or other preventive measures must be taken in hand at once and persisted in if needed until every insect is destroyed. Only this way can a good crop of flowers be hoped for.

### Camellias.

There is quite a demand for camellias in some localities and probably it could be worked up in others with a little trouble. Many growers fail with camellias, yet they are easy to grow, if gone about in the right way. If grown simply for cut flowers there is no better way than to plant them out in a small, well-made border or bench. The soil should not be very rich, but must be of good substance, fairly heavy and very firmly placed, rammed, in fact, around the roots so that a good hard, solid growth is made. This makes either solid beds or concrete benches more suitable for the plants than wood benches, the solid beds being best of all. Camellias like a moderately moist root run all the year around and, although the plants rest during winter, any drying off on the one hand or excess of moisture on the other leads to dropping of the flower buds, a frequent trouble with these plants unless carefully handled. Almost a hardy plant, the camellia will not stand forcing conditions. Cool, airy quarters with plenty of light in winter and sufficient shading in summer to keep the leaves from injury are the conditions they like. The plants are not unduly predisposed to insect attacks, but scale is frequently troublesome, especially where the atmosphere is dry and the plants are not sprayed frequently. A thorough washing with water from the hose two or three times a week is of great assistance during early summer when the plants are making their growth, and at this time the roots must also be kept more moist than at any other time. Given these few simple details there is no reason why anyone should fail with camellias, and a few plants purchased and planted out would be all the while growing into money and produce more flowers annually.

### Single Chrysanthemums.

These pretty varieties are annually becoming more popular and there are many very beautiful things offered by specialists in their culture. Plants should be purchased as early as possible, as they can then be propagated freely, one plant being made into five, six or even more and yet be in plenty of time for either cutting or pot work. Propagation of any varieties at home of which stock may be short can also be started now and the resulting young plants can be topped again later. The chrysanthemum roots best in a cool house on the usual sand bench kept moist at all times. No bottom heat is necessary, but shade from bright sunshine should be provided. After being topped and the cuttings inserted, the young plants may be bedded into flats, where they will go on producing cuttings and can eventually be either planted out on the benches or potted as may be necessary.

### Propagating.

The propagating of roses and carnations should be pushed along to a finish now as soon as possible, as it is not well to have late stock lying about unless it is wanted for any special purpose such as planting a new house or section that will not be ready early. Even in such a case it would probably be better to propagate early and give the plants an extra shift, the larger plants at planting out time offsetting the extra expense of potting and the labor of planting out bigger stock. This refers, of course, to roses rather than carnations. Grafted plants in the cases should be watched carefully and sunshine rigorously excluded until they are well united and growing freely. Sun wilts the plants quickly and badly wilted growth seldom picks up properly. As soon, however, as the plants are sufficiently callused to stand it a little air night and day will prepare them for removal from the cases.

HITCHINGS & Co., New York, have been awarded the contract for the new conservatory to be built in Nay Aug park, Scranton, Pa. The house is the gift of John Cleland and the plan shows a very attractive and useful looking house.

### To Be Done Now.

#### IN THE GREENHOUSES.

Watch young cyclamens very closely for thrips and other insects and take means to destroy them on sight.

Give only enough heat to growing dahlias to keep them gently moving, a solid slow growth being better than a rapid one.

Keep poinsettias quite dry at the roots and cut the plants back to sound wood.

#### OUTDOORS.

After the frost goes out of the ground, look over the bulb beds and tread in any that may be lifted.

Head back apple and pear trees that are to be grafted to improved varieties

G. L. FREEMAN, FALL RIVER, MASS., (ON MULE) RETURNING FROM AN ORCHID COLLECTING TRIP IN COLOMBIA.

Keep the flowers pinched out of alternantheras, as they only check the growth.

Allow plenty of light and air around all newly flatted seedling bedding plants just as soon as the roots have taken a hold of the soil.

Watch seedling asters and stocks and see that they are not allowed to become infested with green fly.

Watch the fires on bright mornings following cold nights, as too much heat on the pipes is apt to cause insect attacks.

Keep all decayed geranium foliage carefully picked off, as the decay is apt to spread to healthy plants.

Keep the syringe going freely among the hydrangeas now starting up for Memorial day.

Don't try to rush lilies that are evidently too late for Easter. They will be useful whenever they come in.

Avoid drip on the pans or flats of seedling ferns or they will die out in patches.

this year, but leave a little wood to be cut back just before grafting.

Rose pruning should not be hurried, as late frosts occurring in May are very apt to injure the young shoots.

Plant *Eremurus Himalaicus* and *E. robustus* in a sheltered position if possible. These plants are hardy enough, but the foliage is apt to be injured by cold drying winds in spring.

Leave fruit trees alone as long as frost continues, but start pruning as soon as the thaw begins, commencing on the larger and hardier trees first.

## OBITUARY.

### Francis G. Dwight.

On his eighty-second birthday anniversary, Francis G. Dwight, a native of Reading, Pa., and a well known dealer in seeds, died as the result of a stroke of paralysis, at his home, 1574 Mineral Spring road, February 26. He has been in failing health for three years. Mr. Dwight was the first seed dealer in Reading. His first business place was at 512 Penn street. Later he moved to 518 Penn street. Pressed for room, Mr. Dwight moved his business to 343 Penn street, where he continued until five years ago. Deceased is survived by his widow, Ida E. (nee Hoeckley), and nine children.

### Our Supplements.

Subscribers should see that they get copies of the fine supplementary illustrations showing high grade design and decorative work. These fine supplements appear with each issue and should be carefully preserved, as they mean much to the retail florists in dealing with their customers, illustrating as they do the various kinds of work that the everyday florist is called upon to perform.

The papers in which the supplements appear should be likewise preserved, as they contain much valuable data with regard to these special illustrations. Subscribers should see that they get every issue as otherwise they may miss some of this high grade work.

Before man's fall, the Rose was born,  
So Ambrose says, without a thorn.

EASTER in two weeks.

A MAJORITY of 200,000 school children has voted "black eyed Susan" the state flower of Maryland. The gorgeous display of the Maryland colors, orange and black, was one of the principal reasons for the choice.

## Society of American Florists.

The mid-Lent meeting of the executive board of the Society of American Florists will be held at the Seneca hotel, Rochester, N. Y., March 12 at 10 a. m., and will continue until March 15, inclusive.

H. B. DORNER, Sec'y.

## American Rose Society.

### PROGRAMME OF THE PROCEEDINGS.

The annual meeting of the American Rose Society will open at 7:30 p. m. sharp on Wednesday, March 16. The transaction of business will be in the following order:

Calling to order, by President August F. Poehlmann.—Address by the president.—Reading minutes of previous session.—Secretary's report.—Treasurer's report.—Report of committees.—Selection of place for next year's meeting.—Miscellaneous business.—Election of officers.—Appointment of committees.—Adjournment, as business may require. A question box will be opened at the secretary's desk. Under the order of essays and discussions, addresses will be made as follows:

First Session.—Paper by Adolph Farenwald, Roslyn, Pa., on "Roses—The Brightest of Flowers." Paper by S. B. Sibson, Portland, Ore., "North Pacific Coast Roses."

Second Regular Session.—(Thursday afternoon at 2:30 p. m. sharp.) Address by James Wood, Mt. Kisco, N. Y., president of the Horticultural Society of New York, on "The Ideals of Horticulture." By Geo. V. Nash, secretary of the Horticultural Society of New York, on "The Rose and its History." An illustrated lecture with colored lantern slides.

The American Rose Society fixed no hotel headquarters in the city, as all the business pertaining to the annual meeting will be transacted at the American Museum of Natural History.

There has been another prize of \$10 offered by S. J. Reuter & Son, Inc., Westerly, R. I., for the best vase of My Maryland roses of 50 blooms.

Joseph A. Manda is the manager of the exhibition.

The Horticultural Society of New York has issued a joint premium list with the American Rose Society, and in that list the value of the silver cup, offered by Moore, Hentz & Nash, of New York, should be placed at \$50. It is listed as No. 190 in Division F.

BENJAMIN HAMMOND, Sec'y.

## Flowers for Parisians.

It would be difficult to ascertain how much money is spent in the year on flowers in Paris, but some idea of the colossal dimensions of the traffic may be gathered, says the Chicago Record-Herald, from the estimate formed by competent persons that every year the purchases of flowers made by the Paris market in the single department of the Alpes-Maritimes amount to nearly \$15,250,000.

A typical example of the orders received on occasions by Nice and adjoining towns is furnished by the sums spent in flowers for the funeral of President Carnot in July, 1894. The consignment sent to the capital alone from the Riviera represented more

than \$300,000, while almost as much came from the provinces and from abroad. So enormous was the demand for all kinds of flowers that the great flower market at the Halles was quite unable to cope with the business. The florists, therefore, treated directly with the horticulturists in the environs of Paris, and several times a day they visited the gardens and bought up without discussing the price whole flower beds of rose trees, marguerites, pansies and marigolds and greenhouses of orchids.

The Czar of Russia ordered his ambassador in Paris, Baron de Mohrenheim, to send a wreath to the interment worth 8,000 francs (\$1,600), and told him to get it from a florist in the rue Royale. But the house in question was unable to execute the order, and so it went to a firm in the Boulevard de la Madeleine, which supplied a magnificent wreath for \$1,000. As at the funerals of Victor Hugo, Thiers and Gambetta, the number of wreaths as at the interment of President Carnot, was very considerable and many measured several yards in circumference.

The flowers sold in Paris may be divided into two main categories, "le Nice," "le Midi," which reach the capital in large quantities every day by the trains of the P. L. M. company and "le Paris" or "le chauffe," so called because they are the product of conservatories where their growth is forced by artificial methods, after which they are brought to the Halles by the gardeners from their establishments around the city, carefully wrapped up and protected from the cold. "Le tres beau Midi" goes to the best florists who pay top prices, "le Midi ordinaire" to the little florists and the humble flower sellers who hawk their perfumed stock in trade around the streets.

The "chauffe" cost more than the beautiful roses and violets of Nice, for the reason that the artificial sun to which they owe their birth is a very expensive affair, whereas the Riviera horticulturists get theirs for nothing. A Paris florist sometimes charges three or four francs for a rose in winter. But perhaps it has cost him two francs; he has ordered five or six dozen roses from the south of France, but when they arrive a dozen are "perdues," and unsalable, and the loss has to be made up on the others.

The bouquets and corbeilles which figure on the tables of the wealthy frequently cost 100 francs (\$20), but they contain perhaps two or three dozen orchids for which the flower dealer has paid a good price. Besides, the corbeille is a veritable work of art, a picture, and is the achievement of a special employe known among florists as a "coloriste," whose occupation is to arrange the flowers so that they shall look their best and speak their most seductive language. The coloriste is generally a woman.

Her first duty in the morning is to dress the window, so utilizing the grace and harmony of her floral treasures that the passerby will be so charmed, so fascinated, that, after a moment's hesitation, he or she, yielding to the irresistible art of the coloriste, will enter the shop and buy the flowers.

## Meetings Next Week.

**Baltimore, Md., March 14, 8 p. m.**—Gardeners' and Florists' Club of Baltimore, Florists' Exchange hall, St. Paul and Franklin streets.

**Boston, Mass., March 15.**—Gardeners' and Florists' Club of Boston, Horticultural hall, Cleveland, O., March 14, 7:30 p. m.—Cleveland Florists' Club, Progress hall, 2610 Detroit street.

## Assessment of Greenhouses.

J. R. HAMILTON V. EDMONTON UNION.

An appeal to quarter sessions of considerable importance to the horticultural trade took place at the Hertford quarter sessions, on Friday and Saturday last. They were 47 appeals of nurserymen in the parish of Cheshunt, and by an arrangement with the assessment committee, four cases were selected as tests, viz.: J. R. Hamilton, A. Matthews, E. Rochford and Thomas Rochford & Sons, Ltd., to be taken in the order mentioned.

The appellant was represented by H. E. Duke, K. C., M. P., Bernard Campion and E. H. Tyndal Atkinson, instructed by Hutchings & Cuff, of 6, Stone buildings, Lincoln's Inn, London, and the union, by J. A. Simon, K. C., M. P., W. C. Ryde and E. C. Fulton instructed by F. Shelton, the clerk to the guardians.

Mr. Hamilton gave evidence as to the condition of his property the Trinity Nursery, Marsh lane, Waltham Cross. The 86 greenhouses with packing shed, stable and water tower, covered a total ground area of 4a. 3r. 4p., and the vacant land covered an area of 6a. 2r. 19p., making a total of 11a. 1r. 23p. Mr. Hamilton said that he worked this property in conjunction with two others in the neighborhood, and for some time past he found that he had not made any profit from this particular nursery. The glass structures were nearly all built 22 years ago for the culture of cucumbers, but owing to their age, and the fact that the soil was so infected with disease, fungoid and insect pests, he had been unable to grow cucumbers for some years. Samuel Bonnett (foreman to Mr. Hamilton) gave corroborative evidence.

Edmund Rochford gave evidence as to the various pests market nurserymen have to contend with, and said he considered that there was no value in this glass beyond its break-up price. He estimated that he could cover one acre of land with glass houses, after allowing a considerable amount for contingencies for about £1,100. Dr. Voelcker gave evidence as an agricultural analytical chemist, as to the eel worm and other insect and fungoid pests found in nurseries, and Professor Massee of Kew Gardens gave similar evidence as to the destructiveness of these pests.

J. B. Slade, F. S. I., partner in the firm of Protheroe & Morris, horticultural auctioneers and valuers, of 67 and 68, Cheapside, London, E. C., said that he had had many years' experience in dealing with the rating of greenhouses in all parts of the country. He had been acting for the whole of the 47 appellants in these cases during the past 18 months, and had been endeavoring to come to some settlement with the assessment committee. He had made several inspections of this property, and in his opinion it would be practically impossible to let or sell the same. He did not think the net rateable assessment upon it should be more than £138 per annum.

P. Michael Faraday, of Faraday & Rodgers, rating surveyors, 77, Chancery lane, London said that his figures practically agreed with those of Mr. Slade. W. H. B. Castle (Castle & Son), 40, Chancery lane, London, valuer to the assessment committee, said that he valued the greenhouses at £6,300, and took 5 per cent on this sum for the rateable value giving £315 11s. 2r. Op. of land at £5 per acre 57

£372

H. Trustram Eve of Westminster and Bedford, said his figures worked out at £571 gross and £381 rateable made up as follows:

|                      |      |
|----------------------|------|
| Glass erection ..... | £334 |
| Buildings .....      | 24   |
| Land .....           | 23   |
|                      | £381 |

W. P. Ryan of Morris & Ryan, 1, Metal Exchange buildings, E. C., said his figures worked out £391 rateable. Alfred Bowyer of Alfred Bowyer & Jones, Enfield, said his valuation as between a willing seller and a willing purchaser of the greenhouses was £6,013 which at

| 5 per cent gave.....     | Rateable. £300 |
| Stabling, etc. ....      | 18             |
| Land at £5 per acre..... | 57             |

£375

After summing up by counsel, the court retired and on its return said that they had decided to allow the appeal, and reduce the assessment from £498 gross, and £332 rateable, to £330 gross, and £220, rateable, costs to follow the event. The other cases were adjourned till the April sessions.

N. B.—The figures in the valuation list first appealed against, were £675 gross and £450 rateable. These were reduced by the assessment committee to £498 gross, and £332 rateable, the amounts appealed against at quarter sessions.—Horticultural Advertiser (Eng.), February 23.

## European Horticulture.

FROM THE FRENCH TRADE PAPERS.

An international horticultural congress will be held at Brussels, April 30 to May 3, 1910, under the auspices of the Belgian Federation of Horticultural Societies. Horticulturists of all countries are cordially invited to be present and to take part in the discussions, and the date, that of the opening of the Universal exposition at Brussels, is a most favorable one. The sessions will be varied with excursions to the Arboretum and Colonial museum at Tervueren, the royal greenhouses at Laeken, etc. Far-reaching and very beneficial results have been obtained from these congresses in the past, and a large attendance is confidently expected. Among other questions announced for discussion are: Section of Floriculture.—"Germination of Orchids," "Experiments in Floriculture," "Forcing of Flowering Plants in Different Countries as to Method and results." Fruit Culture:—"Rational Catalogue of Fruit Trees," "Culture of Fancy Fruit," "Preservation of Fruit by Cold or Other Means," "To Combat Diseases and Insects." Market Culture:—"Experiments," "Monographs on Special Cultures," "Means of Facilitating the Marketing of Garden Products." Study of Markets:—"Preserve Factories as Means of Regulating Prices," "Study on Production and Selection of Seed," "Social Influence of Market Gardening," "The Rural Exodus." Horticultural Economy:—"Questions of Trade, Transportation and Association." General Horticultural Topics:—"Decorative Planting," "Arboreal culture—Decorative and Forest," "Transplanting of Large Trees," "Evolution of Flower Planting in Parks and Gardens," "The Judicious Use and Proper Construction of Rocks in Parks and Gardens," "Public Plantings in Cities." "Landscape Architecture in Exhibitions"—"Special Materials and Processes:—"Influence of Electric Light on Plants," "Results of Etherization," "Uses of Artificial Cold," "Production of Artificial Cold," "Effects of Hot Water on Shrubs to be Forced."

Remedy for Rose-leaf Rust.—This is caused by a cryptogam (Phragmidium subcorticum) which, of course, preys most easily on weakly plants.

The first efforts, therefore, should be to build up the vigor of the plant itself with liquid manures, the second, to destroy the parasite. A spray made in the following manner has been found efficacious: Dissolve two pounds of sulphate of copper in 10 quarts of water; elsewhere, slake two pounds of lime in five quarts of water; mix the two in an old vessel, adding two pounds of flowers of sulphur, and boil three-quarters of an hour. This gives 12 quarts of a greenish liquid which should be bottled and used when needed. For syringing, add one quart of the liquid to 10 quarts of water, taking good care of the under side of the leaves. In the spring the plants may be brushed with the undiluted liquid, and the fallen leaves should be gathered up and burned in the fall.

The Heating of Moistened Soils.—Recent interesting experiments have been reported to the French academy of sciences in regard to the rise of temperature which takes place when dry soil is moistened. It is found to be due to the affinity which the clay and humus have for water, an affinity so energetic that a very appreciable amount of heat is released. This explains the well known fact that, after several hours' exposure to hot sunshine, the earth drying and attaining a temperature of 110° or so, a rain following will often cause the death of young and tender plants by raising the temperature as it does, sometimes 20 degrees. This also gives a logical reason for not watering in full sunshine.

Clematis Mandshurica.—This beautiful pure white clematis is closely allied to C. recta, but differs from it in manner of growth, possessing a stout stem and growing into a strong bush from six to seven feet tall. This spreads at the top and covers itself, from base to tip with loose panicles of small, six-petaled pure white flowers, which are very fragrant, especially at evening. If the seeds are not allowed to form, new shoots from the base will bloom in August and September. This plant is especially adapted for the open sun and would be invaluable in the hardy border.

Senecio Mikanioides.—This is sometimes called summer ivy and is a most graceful and vigorous climber, growing luxuriantly in the open air during the entire summer season, but is not hardy. If, however, young plants are wintered in a temperate house, they will bloom in spring. The little terminal corymbs of small yellow flowers are very fragrant. Senecio scansens, on the contrary, is a new introduction from China, and quite hardy and vigorous. Its yellow flowers open in October and the vine, of rapid growth, is well clothed with grayish-green, slightly velvety foliage.

A New Montbretia.—A new montbretia, Prometheus, has been recently exhibited, of unusual height and beauty. The stalks exhibited showed a growth of stem of from 40 to 50 inches, and a generous setting of flowers from two to four inches in diameter, of a beautiful brilliant orange with ruddy brown at the base of the segments. This should be a great addition to our gardens, where the montbretias are too little grown.

## CUT FLOWERS

### Chicago.

#### AN OVERSTOCKED MARKET.

Stock continued to pour into the market at the end of the week, and it was quite impossible to move it all. A large buyer of carnations was able to procure flowers of very fair quality at \$5 per 1,000, while bulbous stock, sweet peas and other flowers simply had to be slaughtered to move them at a all, and considerable stock was wasted. The few bright days opened up the flowers very rapidly, not only around the city but at other points to which stock is shipped, consequently the orders were cut down from outside points, while the supply kept getting larger every day. Long-florum lilies are coming in fine in substance, but short, and it looks as though many of the Easter flowers will be this way. Bulbs potted in November and started in heat right away, as many of the Giganteums had to be this season, do not get time to become established in the pots before forcing commences, hence the short growth. Roses, which have been on the short side so long, are now over plentiful, indeed there appears to be an over abundant supply of everything. Orchids have been too plentiful to clean up, and the local growers do not seem able to take a lesson from their eastern brethren as to allowing the flowers to develop before cutting. We see repeatedly what would be excellent cattleyas, if they were allowed to finish, offered in a half developed state; then the growers wonder why the eastern flowers are bigger. C. Triana and C. Schroderæ have the call and there are fine cuts of these elegant species.

Saturday was a bad day but on Monday things seemed a little brighter in some respects. In most of the commission houses handling them, violets were a glut. Some of the eastern stock we saw opened on Monday was absolutely useless when unpacked. There was no fragrance to the flowers—there was an odor—and the petals fell freely on the bunches being shaken. It is useless sending such rubbish, for no self-respecting commission man would risk offending his customers by offering it. Indications are that there will be plenty of white carnations for St. Patrick's day. There is lots of time for the Heinz process to be carried out between March 17 and March 27, still there are hopes that the St. Patrick's day demand may

prevent salting down of whites for Easter to some extent. Time will tell whether the hope that springs eternal in the more or less human breast of the commission man is justified or not. The "nip in the air" the early part of the week caused some comment and it was freely remarked that it would "shorten up rose stock" for Easter. We may be wrong but, judging by the excellent condition of the stock we have seen at the various growing plants around the city, it will take something more than a few cold days, especially if bright, to shorten the cut to any extent and, early as the date is, we shall be much surprised if the usual quota of fine roses is not forthcoming. The plants have had plenty of time to recuperate after the severe cutting at Christmas, and the comparative rest they had in January is reflected in the fine growth now being put on. Bulb stock continues to arrive plentifully, some elegant Keizerskroon and Murillo tulips being noted as among the best this week. Smilax is arriving good, but not over plentiful. Much of the Asparagus Sprengeri coming in is yellow, owing to heating in transit, and good A. plumosus is not too plentiful. Roman hyacinths of best quality have been in demand, also lily of the valley, but poor stock of either drags badly.

#### NOTES.

The Geo. Wittbold Co. reports another busy week. The spring-like weather of a few days ago had its reflex in advance orders for herbaceous perennials, grass seed and similar lines dear to the heart of the suburban gardener, while department store decorations have called for a large amount of stock. Marshall Field & Co., Stevens and Carson, Pirie, Scott & Co. are among the biggest of the orders received during the week, with others in smaller amounts, and the fine weather is also helping the retail end.

Bassett & Washburn's American Beauty sections are now in elegant crop and likely to remain so over Easter. They are sending in over 100 a day of the long-stemmed flowers, as well as large quantities of the medium and short grades. No new building at Hinsdale has been decided on as yet, but several of the older houses will be renovated and put in order the coming season.

Among the offerings at Vaughan & Sperry's this week we noted especially good sweet peas, long-stemmed, brightly colored flowers, fresh and very fragrant. Enchantress and Lawson carnations, Killarney roses and Princess violets—the latter far too good for the state of the market—were also leading items. Pretty little pots of shamrock have also been shown all week.

Fine Murillo tulips, lilies and carnations have been the features at the Deamud Co.'s store this week. The

CHICAGO.

run on Conquest has been remarkable and the flowers are snapped up immediately on arrival. We also noted fine bunches of the new Mrs. Walter W. Coles, from W. W. Coles of Kokomo, Ind. It is a very beautiful deep crimson and quite distinct.

The quality and quantity of the carnations now coming in to Peter Reinberg's store are both great. These are the produce of the new ranges at the "farm" and show what clean, new houses and soil will do towards perfecting fine stock. The Beauty crop is also at its best now, in fact the supply of all roses is very large and the quality unsurpassed.

Aug. Lange has been very busy with funeral work, and the low price of stock now gives him a chance to put good value in his dollar boxes of flowers. The near approach of St. Patrick's day reminds us of Mr. Lange's bet with Alderman Michael Kenna about this time last year that he could grow shamrock here in the city from seed sent over from Ireland, which he did.

Charlie Zapfe, of the Budlong force, took a half day off on March 4 to be put through a course of sprouts in the Masonic fraternity. What the honors or degrees were that Charlie was initiated into we must leave, as we have no desire to go where angels fear to tread.

The roses at the J. A. Budlong store are now in grand shape, Killarney, Richmond and Mrs. Jardine being leaders. Phil Schupp says that indications point to a good supply of white carnations for the St. Patrick's day demand. Stock cleans up well here daily.

John Mahgel's table, furnished for St. Patrick's day, is a great attraction in his Monroe street window, and all day long a crowd of interested people are looking at it. Green hats, shamrock baskets, clay pipes and the noble "Murphies" are all to be seen.

Speaking of the sudden change in the weather, C. L. Washburn notes the fact that they were cutting their ice at Hinsdale three years ago on March 4. Winter at the end of February and spring March 1 is not a combination to improve trade.

Sam Pearce continues to send in elegant bulb stock in great quantities. His Lorraine, Yellow Prince and Couleur Cardinal tulips are excellent, as are the daffodils and jonquils. He reports Giganteum lilies coming along well for Easter.

# EASTER

It is not too early to think about your stock for Easter—in fact if you do not think of it soon the other fellow will get in ahead of you and you will be watching him sell the goods that you should have sold.

We are in a stronger position at present than any house on this market to take advance orders, handling the stock of the best growers in this section and with a force that insures satisfactory treatment and in this connection we wish to particularly call attention to our

## EASTER LILIES

Which are the finest that have ever been brought to this market. An order placed with us will convince you that you should always buy from

# J. B. DEAMUD CO.

Joliet. Orders are coming in rapidly for carnation plants and they are well booked up on Conquest, Sangamo and Mary Tolman.

Bergman, Zech and Yarnall have all one hand on that Deamud cup. T. C. Y. also has two eyes on it all day long and it is currently reported that he either takes it home with him at night or sleeps in the vault.

Zech & Mann say "business is fine." The Richmond roses they are showing certainly are. Bulb stock is also in first class shape here and the carnations being handled are of superior merit.

John Bruchner, of Sixty-ninth street, who has been seriously ill for quite a long time and whose life at one time was almost despaired of, is, we are pleased to note, around again.

Gladiolus America, May, Augusta and other popular varieties for florists, are selling well at Winterson's Seed Store. About 15,000 copies of the new seed list have been mailed.

Sinner Bros.' roses are a little off crop just now, but plenty of carnations are arriving. White Killarney and My Maryland are to be much more heavily planted this season.

Wietor Bros. intend rebuilding about 10 of the houses at the lower plant this year. These houses are 250 feet long and devoted to roses. Moninger material will be used.

"Sold out daily" is Hoerber Bros.' report and Harry Manheim may be seen scouting around after the fine stock from the greenhouses is sold to fill late orders.

A. L. Randall Co. is very busy with Easter supplies and the many novelties offered in the fine show room are meeting with an excellent demand.

E. H. Hunt reports plenty of advance orders for white carnations for

St. Patrick's day, and a big demand for the "Absorber" green dye.

Mrs. James C. Curran has been sick for quite a while with rheumatism, but could not miss the banquet of the Florists' Club, March 3.

President Poehlmann of the American Rose Society, leaves for New York next week for the annual convention and exhibition.

Albert C. Rott, Joliet, Ill., though suffering from severe cold, has been in town looking up stock for his Easter trade.

Extra good Killarney roses and Easter lilies have been prominent at Weiland and Risch's store all week.

Geo. Asmus, H. B. Dorner, J. A. Valentine and W. N. Rudd leave for Rochester Friday, March 10.

Nic Miller, of the J. B. Deamud Co., started March 7 on a business trip through Michigan.

Al. Fisher left March 7 for Detroit to participate in the great bowling tournament.

Albert Erickson has resumed his former position at Vaughan's Greenhouses.

Geo. Reinberg is showing some elegant mignonette, grand full spikes.

Ernst Wienhoeber is in the east looking up holiday stock.

Visitors: Albert Heath, Milwaukee; Wm. A. Gardeen, of Chas. Thorley's, New York; Von Zonneveld, Satsenheim, Holland; A. T. Pyfer, Joliet; Albert C. Rott, Joliet; E. J. Fancourt, Philadelphia, Pa.; S. C. Weber, St. Louis, Mo.; A. L. Glaser, Dubuque, Ia.

### LADIES' NIGHT AT THE CLUB.

The ladies say they had the time of their lives at the Union restaurant March 3. H. N. Bruns, A. C. Kohlbrandt, J. P. Degnan, Herman Schiller, Frank Pasternick and Duncan A. Robertson, the committee in charge, have every reason to feel proud of the

entertainment provided. Little Miss Marshall with her characteristic songs and dancing was the favorite of the evening. The other numbers included: Miss Eulalia Stone, vocal soloist; Mrs. L. F. Smith, bell soloist; Mrs. Clara McCloud, elocutionist; Miss Lena Moneak, violin; Master Walter McCloud, German dialect; Miss Mathieson, piano soloist, and Miss Lawrence, violin. We noted Harry Balsley of Detroit among the visitors.

### Joliet, Ill.

Business all around has been on the quiet side, but the past week, since the brighter weather, things have livened up considerably. There are prospects of a good Easter, as several advance orders for decorations and other work have been booked by the leading retailers. Stock looks promising and there will be plenty of it. Not many lilies are grown locally, but those we have seen look well and will be on time.

Albert C. Rott and wife have both been on the sick list, but, with characteristic pluck, both have kept going. Mr. Rott has had several pretty decorations of late and advance orders for plants and cut flowers for Easter are coming in freely. He has an Irish window in mind that will be a startler, but we are tied to silence as to the details. We trust both he and Mrs. Rott will be back in good shape for the Easter rush.

At both the Chicago Carnation Co. and the J. D. Thompson Carnation Co.'s plants stock will be in great shape for Easter. Cutting and plant trade is brisk at both places.

The Shepherd Floral Co. reports business good and good orders coming in for landscape work, which will be a specialty here this season. G.

# EASTER PRICE LIST.

We have never been so well prepared for what we believe will be the **Busiest Easter on Record**. The whole of our vast greenhouse plant is in splendid condition and crops will be at their best for Easter.

## CARNATIONS.

Our immense new carnation range is producing magnificent stock in great abundance. The flowers were never so good or plentiful and we can truthfully say there are **no carnations in the world to beat ours**.

**Beauties** Our Beauty crop is at its height and we shall have large supplies in all grades for **Easter**.

## ROSES.

**Not a few but all the best varieties.** The crops are large, the quality absolutely perfect. There are no better flowers coming to this or any other market.

**Send Us Your Orders and they Will be Taken Care of.**

2,000,000 FEET OF MODERN GLASS.

# Peter Reinberg

**35 Randolph St., CHICAGO.**

### St. Louis.

The weather opened up during the past week and it is now warm and springlike. It has already shown itself on the violets. Many sleepy blooms are on the plants and it is doubtful if they will last for Easter. Carnations are not as plentiful, white and red being scarce. Roses are arriving fairly well. This warm weather will help the plant men. Fancy ferns are shortening up. Southern jonquils are in.

### NOTES.

A meeting of the Retail Florists' Protective Association was held last Wednesday evening at the Washington hotel to protest against any wholesaler retailing or making design work and delivering to private parties. This was agreed to be antagonistic to the retailer. There were about 25 pres-

ent. The following officers were elected: C. C. Sanders, president; F. H. Weber, treasurer; Chas. Young, Jr., secretary. This association is charging \$5 initiation fee and 50 cents per month dues. It proposes to look after legitimate retailers' interests, also to post one another on deadbeat customers.

The Riessen Floral Co. had the decorations for the banquet at the Planters' hotel given to the Hamilton Brown shoe salesmen before their return to Boston. There were about 300 present. The tables were beautifully decorated with all kinds of flowers and greens, many violets being used.

Hugo Gross is thinking of erecting two houses 200 feet long this summer for roses. If as successful with these as he has been with violets and sweet peas he will be a great help to the market. His stock is successfully

handled by the Wm. Smith Wholesale Floral Co.

C. Young & Sons Co.'s sign in their window reads, "Everything for the Garden." Jim Young stated that the prospects for Easter lilies with him were "about enough to go around." He will have plenty of azaleas, hyacinths, spireas and all flowering plants.

Rufus J. Lackland's funeral last Wednesday was largely attended. Prof. Trelease being one of the mourners. The floral offerings were beautiful.

Chas. Young, Jr. is very proud of his bouncing five-months' old boy. His grandfather expects to have him help out at the store at Easter.

Dominic Bova purchased 80,000 California violets last Thursday. This was the largest single sale ever made by the Wm. Smith Floral Co.

Vincent Gorly has returned from a visit to Kansas City.

Visitor: John Rubach, representing Lion & Co., New York. W. F.

## Cincinnati.

### A GREAT IMPROVEMENT.

A decided improvement over last week's business is noticeable all around. All kinds of stock, with the possible exception of violets, clean up to a greater extent and it is hoped the prevailing conditions will hold out for some time to come. White roses are not at all plentiful; in fact, they might be said to be scarce at the present writing; otherwise we have a nice lot of roses to do business with. The supply of Beauties is equal to the demand and some splendid Killarney, Mrs. Jardine and Bridesmaid are on the market and the prices have become reasonable. The carnation outlook is much better than last week and receipts have been equal to the demand. Some of the stock is of superior quality, but about two-thirds run to splits and inferior grades. Of course the demand is principally for white, although light pink and Rose Pink Enchantress receive a fair call. As before stated, the violet market has gone to pieces. Singles are fine and the crop is on, but the demand is not here. Sweet peas are plentiful and 50 cents per 100 buys a fair grade, although some sales were reported at 75 and the quality had to be exceedingly fine to get the extra quarter. Good Murrillo tulips were to be had, although not enough for the demand.

Easter lilies and callas were more abundant and seem to clean up nicely every day; in fact, bulbous stock of all kinds was good property all week. In the line of green goods, Asparagus plumosus is still scarce and there is just about enough Sprengerii for orders, while no orders are turned down for smilax.

### NOTES.

A. C. Heberling, of Georgetown, Ky., was a caller on Saturday. His royal highness is very much interested in automobiles and undoubtedly came down to take in the show, although he claims a sick friend in one of the local hospitals was the cause of his visit. It's dollars to doughnuts he did not pass up the automobile show. He says business with him has been very satisfactory this season.

James O'Malley has moved his store across the street from his old stand to 609 Walnut street, the store formerly being occupied by Huntsman and later by Coulthardt & Pogus. As Jim is a good designer and well known in the city he undoubtedly will do well and we wish him success.

Frank Smith of Smith & Feters, Cleveland, O., stopped over on his way home from Mexico last Thursday to call on his friend, Fred Blecher, another Cleveland boy, but who is now managing the Blecher Floral Co. of this city.

Alfred Murphy has bought the material for a 200-foot house and will begin work on same as soon as the weather permits.

R. A. Kelly has moved next door until alterations are made to the building in which his store is located.

Al. Heckman, Jr., has been on the sick list the past week and we are glad to report is convalescent. S.

## Pittsburg.

The market is just about the same as last week. Carnations will probably be very plentiful for Easter. There are quite a few growers that are off crop now, that will be in line for that holiday. During this period fakirs are seen at every corner of the street selling carnations at 10-15 cents a bunch. Any place they can get a hold they stick a couple of pots and get busy. Bulb stock, such as daffodils, tulips and Dutch hyacinths are finding slow sales, consequently a great amount going to the dump.

Beauties are selling well and are about the only stock there really is any strong demand on.

### NOTES.

A. H. Smith Co. put out a dollar box on Saturday consisting of one dozen daffodils and a corsage of sweet peas tied with ribbon and pins. It made a hit and he had a big run.

Nicholas Harris, of Harris Bros., Market street, has returned from his six months' visit to Greece. Nick is looking fine and still single.

C. C. Phillips and R. Seedan, Washington, have purchased Lloyd Swarthout's store and greenhouses of that place.

Edward Harvey, of Faulk & Furnier, Homestead, is handing out the smokes. The stork left him a 10-pound boy.

Forbes & Donahay, Wheeling, W. Va., have put out a new delivery wagon which is something worth looking at.

Carl Puhlman, Carnegie, reports business good—and considerably ahead of last year.

Geo. Oles, Youngstown, O., has the sympathy of the trade in the loss of his mother.

Mr. Blankensop, of C. A. Dunn, Washington, reports business a little slow.

Ernest Zeiger spent a few days in the east, looking up Easter novelties.

E. Eissner has been in New York attending the funeral of his brother.

E. J. McCallum has been laid up a few days with a cold.

Mrs. J. B. Smith, McKeesport, is reported very ill.

Visitors: Misses Forbes and Donahay, Wheeling, W. Va.; M. Blankensop, Washington, Pa.; Chancy Huscroft, Steubenville, O. J.

NEW CASTLE, IND.—Wm. Dittmann is in Florida resting up for a few weeks.

NEWTON, KANS.—Hasler & Hasselmann have purchased Kline Bros.' retail store in the Postoffice building.

NEWELL, W. VA.—The directors of the Lake Newell Floral Co. held their annual business session February 23 and elected the following officers: Geo. W. Clarke, president; Walter B. Hill, vice president; Fred B. Lawrence, secretary and treasurer; A. E. Radke, manager. The business of the company was discussed and everything was reported in first-class condition. The company has enjoyed a very prosperous year.

# LILIES FOR EASTER

Our Lilies are the finest lot in this part of the country—as fine as any we ever saw—and will be ready for Easter without hard forcing. Your trade calls for good Lilies for Easter, long stems, fine, large flowers, and you will do well to write us at once. We are

## NOW BOOKING ORDERS

Don't forget that good long Lilies will be scarce this Easter. Most growers' Lilies are short and hard forcing will be necessary to get them in, making them soft. We have been specially fortunate in having so large and fine a lot. Write for prices on your needs.

## ROSES AND CARNATIONS

We have large supplies of all Roses and of the best varieties of Carnations—no better stock to be had anywhere.

All Bulb Stock and Green Goods Plentiful.

We give personal attention to every order and this careful service counts. We shall be glad to hear from you for today's shipment or for Easter

### Baltimore.

There is a suspicion of early spring in the air, but March is as fickle as the proverbial woman and we may be tilted yet. But we are enjoying the warm airs and bright sunshine which are succeeding the long cold stretch of winter and they are having some effect upon business. The great over production of flowers, especially of carnations, is bad enough of itself, but now it is complicated by the rush of other surprises from our friends of the Quaker City who in the paralysis which has affected their town as a result of the strike there are shipping their stock to all attainable points, interfering with the normal conditions of trade-currents.

Our street dealers enjoyed last week the customary experience which comes to them each spring of being ordered off the streets, but after representation to the city officials these allowed the curbstome men to go back to their stations, at least temporarily. The thoroughfares have been so crowded with shoppers drawn out by the good weather that a good many sales are made, the gamut running from violets to American Beauties, which latter do not often come into the menu of the peripatetic vendors.

Halliday Bros. on their place on the Liberty road have a most remarkable collection of lilies in all stages of growth. The variety seems to be new and is dubbed here Formosum Giganteum, though whether this is a correct one cannot be told. Certainly in stem, substance of flowers, abundance of bells and freedom from disease it is a marvel. There will be a great crop ready for Easter and succeeding ones for the post-Easter weddings and Memorial day decorations.

Not only are some of the department stores here going into the florist line, but a large druggist establishment makes a specialty on certain days and gets rid of a great quantity of violets. There seem no limiting lines any more in the domains of business and a blacksmith's shop nowadays is as liable to sell carnations as it is New Orleans molasses.

John Cook and Mrs. Cook continue their sojourn in Florida, varying it this week by a trip to Cuba. The former has been fortunate in escaping entirely from the rheumatism which has so long distressed him, the sub-

a burning one and unsettled. A number of gentlemen, estimable citizens and distinguished in their several lines of commercial and professional activity, most of whom, however, probably could hardly discriminate between an oak and a pine tree, sent a petition to the park board asking it to take such action as will preserve the trees in the parks and squares in their natural growth and form, preventing unsightly and ill-advised pruning and clipping of such trees and "all other acts of ill-considered violence heretofore committed upon them." General Latrobe, president of the board, thinks trimming of the trees has been excessive, their natural beauty being destroyed, and he suggested Mr. Manning, the park superintendent, give the park board a list of the trees he proposes to prune, so that that body may decide whether they need it. Mr. Manning said this would be practically impossible. In every park trees must be trimmed, and to keep the parks beautiful it cannot be avoided. It was finally determined to refer the matter to Mr. Olmstead, the landscape architect, and in the meantime no trees are to be trimmed without the consent of Mr. Latrobe, who is a lawyer and the president of the city gas company, and it would be supposed had business and troubles enough for his share without stopping to instruct Mr. Manning in the performance of his technical work.

### TRADE LETTER.

There was a change for the better last week. Crops shortened up a little and an increasing demand on Saturday wound the week up in a very satisfactory manner. There has been plenty of pretty much all stocks although roses shortened up a bit and held their price, even advancing for some grades. Carnations continue plentiful and with prices very low when quality is considered they have been better this season than ever before and as considered with the stock offered but a few years ago when Joost was the popular pink, there is no comparison, and yet prices are not much better now than then. There is a great quantity of spring or bulbous stock such as tulips and daffodils, and they sell fairly well at low prices, \$2 per 100 being the ruling figure. Sweet peas are in demand at fairly good prices. There is a supply of very fine stock coming in daily. Mignonette appears to be scarce and is a good seller. Acacia is about cut out, it sold very well; there is room here for a better supply. Snapdragon is in demand and good stock finds a ready market. Asparagus appears to sell out clean every day. One of the storekeepers said about asparagus: "They make the bunches so small nowadays that immediately the string is cut the whole lot disappears."

### NOTES.

In the discussion of Mr. Herr's paper at last week's meeting of the Florists' Club quite a number of interesting points were brought out. That each bunch should be tagged with the grower's name and date of cutting was advanced so as to protect the retailer and his customer. This idea it was thought by some of the wholesale men present would not work out very well. The question of overproduction was also freely discussed and it was advanced that storekeepers should arrange sales at low prices, the wholesale men and growers giving satisfactory figures on quantity lots to enable the retailing of such stock at a profit. These sales were only to be on special days. How the store men were to sell at 15 cents per dozen one day and 50 to 75 the next and satisfy their customers was not explained. Mr. Herr thought there were too many commission men, thus forcing prices down through severe competition. The question of handling the flowers in the stores was discussed, some claiming that many retailers did not know how or at least did not give this matter the attention they should, and as a result both the grower and dealer were given the

## Easter Lilies Fine Stock.

We expect to cut 25,000 to 30,000 blooms. Prices, cut \$12.50 and \$15.00 per 100; pot plants, per bud, \$16.00 per 100.

We have them in single pots and pans, three and five bulbs to a pan. Fine clean stock. We can ship now, plants in bud, that will be just right for Easter.

Cash with order or satisfactory reference.

**MIAMI FLORAL CO., 24 North Main Street, Dayton, O.**

blame and suffered through no fault of theirs.

Robert Kift told of bringing the outside air into the flower case through a wooden trough from under the front window through the basement and into the bottom of the case. An electric fan running all the time kept up a constant supply of air without too much draft, and that with a temperature of under 50° outside. There was no need of ice to keep the case cool, and carnations would not go to sleep except at times of scarcity when they were kept for high prices and during times of great plenty when they were left too long on the plants. Business methods were touched on, it being said that many excellent growers did not market their flowers to the best advantage and that this was better done by the commission men, who were at all times in touch with the market and were quick to take advantage of an increasing demand. Altogether it was a most interesting meeting with not a dull moment from the opening to the close.

The Merriheights nurseries of J. W. Colflesh, at Fifty-third and Woodland avenues, are right to the front with their fine assortment of Easter stock. Lilies are a feature and this stock appears in splendid condition, as almost every plant is sure to be in. A house of cinerarias are a kaleidoscope of color, each plant a picture in itself. Marguerites in large and small sizes are full of their white blossoms, very well flowered for the season. Hydrangeas in various sizes form an important feature. Special attention is given to this class of plants each season. There is a nice assortment of azaleas in a variety of sizes. Genistas are also favorites and very well flowered plants are to be seen.

The Floracraft Nurseries of Walter Stokes of Moorestown, N. J., are noted at Easter for three things, valley, hydrangeas and lilies. The stock

while always good is this season in splendid shape, the stock of 2,000 hydrangeas being in splendid form and color. They range in size from 8 to 10-inch pots; 2,500 pots of lilies is no mean stock and as they will all be in it will require some handling to get them delivered. Lily of the valley is being cut in quantity every day and for the Easter orders a very large block of pips are set aside.

K.

### Yonkers, N. Y.

The first meeting of the month of the Horticultural Society was held in Guinzberg hall March 2 with 50 members present and President Bennet in the chair. Several new members were admitted and a number of applications received. The committee on the dinner reported progress and stated that the arrangements were very nearly completed and the tickets were selling well. The competition in roses for the prize offered by President Bennet was very keen and a number of very fine blooms were shown. The judges appointed were Messrs. Macdonald, Stanton and Bunn. The first prize went to J. Lamb, second to H. Scott and third to R. Cummings.

Secretary Waite read a very able and instructive paper entitled "Gardeners and the Gardening Profession," plainly showing it to be one of the oldest and most noble professions in existence. Secretary Waite offered a box of cigars as first prize for the most meritorious exhibit of anything to be competed for at the next meeting and S. A. Woodrow a two years' subscription to any of the trade papers as second prize and a one year subscription as third. Vice-president Cochrane will read a paper on "The Culture of Mushrooms" at the next meeting.

Cut Flowers received twice daily. Can fill your orders to your satisfaction. Also headquarters for Wild Smilax, Boxwood, Galax Leaves, Hardy Fancy Ferns. Prices quoted on large quantities.

Minneapolis.

The Minnesota State Florists' Association has decided to hold a flower show in the city this fall.

James Souden, it is reported, has made over the good will of his business to the Radisson Floral Shop, a new concern opening up here shortly. Mr. Souden will join the company as manager and it is intended to cater to a high class business.

Automatic Irrigation.

Col. Hunter of the Boyce Weekly has returned from his farm at Frozen Dog, Idaho, and reports the use there of an automatic irrigating system. It seems that potatoes are planted usually in divisions of two eyes, and by planting a small onion in each hill the eyes water the crop.

**WM. ELLIOTT & SONS**

WILL OFFER AT

**AUCTION, Tuesday, March 15, at noon****Thirty Cases of Holland-Grown Nursery Stock**

Consisting of **Roses, Rhododendrons, Hydrangeas, Azaleas, Boxwood, Retinosporas, Yews, Pot-grown Lilacs, Vines, Privet, Bulbs, Roots, Etc.**

**W. J. ELLIOTT, Auctioneer,****42 Vesey St., NEW YORK****New York.****TRADE FAIR.**

The weather was very rainy and disagreeable during the most of last week and the effect on the market was depressing. It cleared up on Friday and, so far as weather was concerned, Saturday and Sunday were ideal days. The business of Saturday, considering what we have been passing through, was fair. Excepting special American Beauty roses, which are very scarce, there has been no advance in prices, and it is reasonable to suppose that the present springlike weather will greatly increase the supply of stock. Special Beauties have been creeping up in price and a few sold, March 5, for 75 cents each. The short grades, No. 2 and 3, are an altogether different proposition and many of them are hard to dispose of at any price. There has been some talk about the flowers that are being shipped in here from Philadelphia, but we see no cause for alarm. If that fine old Quaker and Presbyterian city will, figuratively speaking, take a day off and put an end to the rioting and disorder which makes her streets dangerous to the innocent visitor, we will do the best we can to take care of the flowers.

March 7.—Possibly on account of good weather there is a better feeling in the market today. American Beauty roses continue to be scarce but there is a plentiful supply of all other stocks. On account of the very bad weather of last week much stock is off color and of poor quality. The prospects are remote of any marked improvement until Easter.

**EASTER PROSPECTS.**

All indications point toward a good Easter. For the past week one could not visit a plant growing establishment within 20 miles of this city without running across buyers from the retail stores. There will be plenty of Easter stock, though it is somewhat doubtful about a large supply of good lilies. Some lilies that we have noticed are very short and backward and others show a scarcity of good buds. Different reasons are advanced for this, the grower and the man who sold him the bulbs usually differing, so it is up to them to settle the question. The opinion has been advanced that on account of so much other good stock being offered at Easter, lilies are less popular than formerly, but there seems to be no good grounds for such an opinion. We believe that good lilies will sell as well or even better than ever before. There are fine stocks of Crimson Rambler, Dorothy Perkins, Lady Gay, Hiawatha, Magna Charta and other pot roses in sight. Not all of them can be brought in for Easter,

but there will be many. The azaleas, ericas, rhododendrons, spiraeas, hydrangeas and other smaller pot stocks will loom large in the aggregate. "Little Old New York" has been observing Lent in a devout way that has caused her detractors to hide their diminished heads and, take it from us, Easter will be celebrated with joy and gladness becoming to a great and religious city that will be emerging from the sack-cloth and ashes of repentance and good resolutions. We have devoted considerable space to plants, but there will also be a great trade in cut flowers. During February the cut flower men struck rather hard times and they deserve something good for Easter.

**NOTES.**

Arthur Herrington, well known to the horticultural trade, has resigned his position as superintendent of the H. McK. Twombly estate, Madison, N. J. His resignation takes effect April 1. He will engage in a general landscape gardening business, with offices at 500 Fifth avenue, this city, retaining his residence at Madison. He was superintendent of Florham Farms, the Twombly estate, for 14 years, and many of the beautiful features seen there are the results of his skillful planning. He is well known and recognized as a man of ability along the lines of landscape horticulture and deserves and doubtless will achieve success in his new venture.

At the store of Chas. A. Dards, Forty-fourth street and Madison avenue, we recently noted a novel arrangement of flowers in boxes. The boxes are about two feet long, handsomely gilded and decorated. They are filled with a variety of flowers, some with roses and sweet peas, others with carnations, sweet peas and yellow tulips. There are also boxes filled with yellow narcissus, sweet peas and pansies. An innovation in arrangement is that fancy crepe paper is placed between each layer of flowers, greatly adding to the beauty of the arrangement.

The next meeting of the Florists' Club, March 14, will be rose and sweet pea night. President Miller announces that a well known member of the club, who is too modest to have his name mentioned, will be present and will give a talk on sweet peas and also give an account of his recent trip to California. After due consideration of the above, we have decided that Anton C. Zvolanek of Bound Brook, N. J., will be the orator of the occasion. He is a modest man, knows a few things about peas, and has recently returned from California.

Among the many signs of spring very noticeable are the announcements of the plant auctions. Wm. Elliott & Sons will have their first auction

March 15. They have a great stock to offer, but, in addition to that it is a treat to visit their auctions and hear William Elliott, the auctioneer, talk. If he had not decided to be a seedsman and an auctioneer he would certainly have made a great orator.

J. Louis Loose, of Washington, D. C., spent several days of the past week in this city and vicinity. Mr. Loose is an extensive grower with a large range at Alexandria, Va. He is also a moving spirit in two large retail stores and a wholesale establishment in Washington.

**Washington.**

The warm, unseasonable weather has caused an overproduction of various kinds of stock, which has decreased the value of good stock to a great extent.

**NOTES.**

The regular meeting of the Florists' Club took place Tuesday night. It being election night a good attendance of members were present. John Robertson was elected president, Elmer Mayberry vice-president, O. A. C. Oehmler re-elected secretary, Tom F. Gude re-elected treasurer. Directors for three years, W. W. Kimmell, David Bissett, O. A. C. Oehmler. After the meeting adjourned everybody made merry. The growers promise to have plenty of A1 stock ready in time.

F. H. Kramer claims that he never has been so busy with funeral work as in the past few weeks, and his store is open until a late hour every night.

Gude Bros. will have an excellent supply of Easter stock, some specimens of which they are displaying in their F street store windows.

Geo. C. Shaffer, who has made a record as a bowler, has gone to Detroit, to bowl with the chamber of commerce team of this city.

The Washington Florist Co. reports good trade, and expects to have an abundant supply of home grown stock for Easter.

J. R. Freeman's window is decorated with advance specimens of Easter plants.

Z. D. Blackstone will have a good supply of Easter plants and novelties. G. S.

MANKATO, MINN.—E. C. Willard's greenhouse was burned to the ground February 25.

WATERBURY, CONN.—Frank Fioto, Hamilton street, is convalescing from his recent illness.

WATERLOO, IA.—Chas. Sherwood has the sympathy of the trade in the loss of his brother Earl, who died February 15, aged 22.

## The Seed Trade.

### American Seed Trade Association.

J. C. Robinson, Waterloo, Neb., Pres.; M. H. Duryea, New York, First Vice Pres.; F. W. Boligiano, Washington, D.C., Second Vice Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas.; Leonard H. Vaughan, Chicago, Asst. Sec'y. Twenty-eighth annual convention, at Atlantic City, N. J. June 21, 1910.

LOS ANGELES, CALIF.—John Lewis Childs left March 9 for the east.

THE agricultural appropriation bill, aggregating 13 millions of dollars, has passed both houses. Free seed distribution will continue.

J. S. MICHAEL, of Sioux City, Ia., passed through Chicago last week, returning from the east, and reports that the February seed business in the cities visited was much behind that of last year.

GILLET, WIS.—Jacob Spies of Grand View, says the Gazette, hauled through here, February 12, a load of clover seed valued at nearly \$1,000. The load was hauled by one team of horses and sold at \$8 per bushel, netting a total of \$960.

THE Indiana Corn Growers' Association is asking the legislature for an appropriation to enable the experiment station at Purdue university to take up educational work for the production and sale of a higher grade of small seeds.

THE late James J. H. Gregory, whose death was recorded in last week's issue, was a broad-minded man, his will including bequests for the Episcopalian, Methodist, Roman Catholic, Universalist and Congregational churches of Marblehead, Mass., declaring that each "in its own way was doing its best for the improvement of mankind."

NEW YORK.—Chas. McTaggart, a well known man in the seed business of this city, has opened a retail seed store at 123 Warren street, near West street. Mr. McTaggart started in the seed business 17 years ago with the Peter Henderson Co. Later he held a responsible position with Weeber & Don. For the past three years he has been with J. M. Thorburn & Co.

CHICAGO.—Contract prices on the board of trade March 9 for grass seed were noted as follows: Timothy, \$3.70 nominal. White clover, from 20 cents to 25 cents.—Leonard H. Vaughan celebrated the thirtieth anniversary of

his birthday March 8.—A. H. Goodwin has returned from Europe.—Bright, mild weather during the first 10 days of March have given a decided impetus to counter and retail trade.

### Soy Beans.

#### ED. AMERICAN FLORIST:

We notice in your issue of February 12 the article in regard to Soy bean utilization. It might be interesting to some of your readers to know that Soy beans are being imported into this port, and that there is a factory in Seattle manufacturing Soy beans into oil cake meal and selling the product for much less than cotton seed meal or oil cake meal made from flax can be sold. If any of your southern readers have a surplus of Soy beans, they can find a market for them in this city.

CHAS. H. LILLY Co.

Seattle, Wash.

### Canary Islands Conditions.

Federico C. Varela writes from Teneriffe at the end of February that drought conditions prevail there more prolonged than have been known in the islands for 30 years. For this reason, he says, crops of Bermuda onion seed may be expected this year only from the best irrigated land, which is worth with water rights and care \$2,000 per acre. The prices of reliable seed can therefore not be made at any low figure and he cautions American buyers against possible offers of cheap seed of either poor stock selection or low vitality, or both.

### American Grass and Clover Seed Abroad.

Vice-Consul George B. Stephenson, of Liverpool, in reply to an American exporter of grass and clover seeds, writes concerning the British market as follows: "The imports into the United Kingdom of grass and clover seed from the United States during the last five years for which statistics are available are as follows, in hundred-weights (of 112 pounds each): 1904, 111,869; 1905, 101,101; 1906, 90,505; 1907, 88,204; 1908, 101,339. The bulk of the clover seed finding an English market comes from Chile, the quotation at the close of 1909 for seed of that origin having been about \$17 a hundredweight. Firms consulted state that the demand for American clover and grass seed on the Liverpool market is somewhat limited, owing to the large amount used in the United States and

the high price given there, which, as a rule, makes it impracticable for the seed to be shipped to England, where it must compete with seeds grown where the home demand is not so great and prices therefore lower."

Consul George Heimrod, of Berne, in answering an American inquiry, gives the following information in reference to imports of grass and clover seed into the republic: "Switzerland imported grass and clover seed in 1908 to the extent of 2,273,000 pounds, from the following countries: Germany, 703,000; France, 500,000; Italy, 412,000; England, 395,000; Austria, 136,000; United States, 116,000; Belgium, 10,000; and Denmark, 1,000 pounds. The German and French seed was valued at \$17.50, and that from the United States at \$9.55 per 100 pounds. The statistics do not give details as to what amount was grass and what amount clover seed. There is no customs duty on these articles. Much of the seed imported from the United States is timothy, as little American clover is used."

### Adulterated Seeds.

Circular No. 31 of the United States Department of Agriculture, dated February 16, says in part as follows:

Kentucky Blue Grass—Of 446 samples 14 were found to be wholly or in part seed of Canada bluegrass, showing a decided decrease from former years, when 39 samples were found. Germination averaged 62 per cent.

Alfalfa.—While 107 out of 359 samples contained dodder, none were found either adulterated or misbranded.

Red Clover.—Of 630 samples obtained 54 contained dodder, less than 9 per cent as against 50 per cent last year. None were misbranded.

Orchard Grass.—Of the 379 samples 55 were found to be adulterated with seed of meadow fescue or rye-grass or both, practically the same percentage as in 1908.

The names of 49 seedsmen and dealers are published in this circular.

### Stock of Potatoes January 1, 1910.

Replies to inquiries made by the bureau of statistics of the Department of Agriculture among potato growers and dealers in the principal potato-growing sections of the United States indicate that on January 1, 1910, about 41.2 per cent of the crop raised for market in 1909 remained in the hands of growers and 9.6 per cent in the hands of interior dealers, as compared with 32.5 per cent of the crop raised for market in 1908 in the hands of growers and 11.3 per cent in hands of interior dealers on January 1, 1909. The total potato crop of 1909 was estimated as 376,537,000 bushels, and the 1908 crop 278,985,000.

## NOTICE.

I have disposed of a part interest in my seed growing business to Mr. L. W. Wheeler and we have incorporated a new firm under the title of Pieters-Wheeler Seed Company, Hollister, Cal.; A. J. Pieters, President; L. W. Wheeler, Secretary.

The new firm will continue to follow my policy of growing first-class stocks and I hope my former customers will favor the new concern with their business.

A. J. PIETERS.

## Market Gardeners

### Greenhouse Vegetable Growers and Market Gardeners' Association.

C. W. Waid, New Carlisle, Pa., President;  
Franklin DeKleine, Grand Rapids, Mich.,  
Vice-President; S. W. Severance, 508 Illi-  
nois Life Building, Louisville, Ky., Secre-  
tary; M. L. Ruetenik, Cleveland, O., Treas.

#### Notes on Seed Testing.

As a rule American market gardeners pay very little attention to seed testing, depending mostly upon the seeds they buy as being strong and fresh. However very often considerable quantities of seed are carried over from one season to another and these are of more value than any new supplies, because we have proven them by actual cropping on our land and under our conditions. Hence it is very important to know the germinating qualities of such stock to avoid losses or delays.

There are several methods of seed testing in common use—placing seeds between layers of moist cloth, sowing in sand and sowing into ground. Each has its proper place and time. However, unless a test is carefully carried out it is worthless. Thus the operator must know the degree of heat and amount of moisture most suitable. The same treatment will not do for all. We must try to get as near as possible at natural conditions. Thus such seeds as are sown early and expected to come up under low temperatures and excessive moisture must be tested along such lines; while heat loving subjects need warm places.

Then we must consider the season. Some seeds are very difficult to sprout in winter and the nearer we approach their natural sprouting season, the better the test, while others again refuse to sprout in great heat, such as the summer months. Thus we see a test made out of season may prove entirely worthless or worse than that, very misleading.

During the winter months the sand test is the best, as seeds sprout more readily in clean sand than in moist earth, and the sand gives enough root action to allow us to judge of the strength of the young plants, which the moist cloth test does not permit. The depth at which seeds should be tested must be decided upon according to season. Thus in the dark winter months very little covering is permissible while later on more covering is needed to allow for higher temperatures and rapid evaporation. Different varieties often vary greatly; thus Grand Rapids lettuce will permit of very little covering only, or none at all, while some head lettuces will push through an inch of heavy clay. A person interested in seed testing should therefore study the nature of the subject to be treated, as regards time, medium used, temperature, moisture, depth and length of duration required to germinate the different seeds.

MARKETMAN.

CANANDAIGUA, N. Y.—A. C. Cappon will erect, this spring, a truss house, 50x90 feet, for carnations.

## Heyl's Concentrated Nitrogen Producer

Prepared under the direct supervision of Dr. Meade Ferguson,  
Bacteriologist of the Government of Virginia.

## For Seed and Soil Inoculation

Do you want your garden, field peas, other legumes to be ready three weeks earlier than other peoples', being at the same time three times sweeter and more nourishing, send 50c for a bottle of "Heyl's Concentrated Nitrogen Producer" made according to Dr. Meade Ferguson, Chief Bacteriologist, State of Virginia. Sole makers Standard Nitrogen Co., Singer Bldg., New York.

Book on Seed and Soil Inoculation free.

## SPLENDID RESULTS

Works with **COMPOSITE** any legume.

84-86 Randolph St. and 202 W. Randolph St., CHICAGO.

"Spring Book for Florists." Ask for it.

### Plant Market for New York.

In an article in the Sun of February 27, headed "School Gardens Wanted," Mr. Stewart is quoted as saying: "I think it would be a good idea to have a plant market somewhere in New York." It is to be hoped that this will not fall on stony ground. New York is the only city of any consequence in the United States that has not a regular plant market.

The New York Market Florists' Association rents from the city 5,000 square feet of ground at the corner of Canal and West streets, paying \$1,000 for the use of it for the three spring months. On this ground they erect a tent, which gives some protection from rain, but does not keep out the cold. This is the nearest approach to a plant market in New York. Strenuous efforts have been made by the above mentioned association to provide a market. Committees have appeared before every mayor and city administration from Grant to McClellan, but they got no recognition until Comptroller Grout became interested. That gentleman, after convinc-

ing himself that a market would at least be self-supporting, took up the project in a very energetic and businesslike manner and had plans and estimates made for a building adequately heated and ventilated, suitable in every way for plant market purposes. He "put it up" to the board of estimate and apportionment, which promptly rejected his proposal. Unfortunately Mr. Grout went out of office about that time, and no further efforts have been made to get a market building.

This may not be the kind of a plant market that Mr. Stewart has in mind, but the fact remains that a plant market in New York is a crying need. Plants and flowers should not be luxuries; there should be some method whereby they could reach the people at a reasonable price. Evidently the School Garden Association and the Florists' Association have the same object in view, namely, to get the people interested in gardening. Obviously the first step should be to agitate for a good market building from which plants could be distributed at the least possible expense. Will the School Garden Association make an effort in this direction?—J. B. in New York Sun, March 2.

### How to Enjoy a Melon.

I extract the following recipe, freely translated from "La Tribune des Societes Horticoles," Brussels, says a correspondent of the Gardeners' Magazine: "Take a Cavaillon melon (shun the Cantaloupe), cut it circularly round the stalk with an enamelled knife and remove the seed with a silver spoon, not disturbing the pulp. This done, put alternate layers of refined sugar (two spoonfuls) and alpine strawberries until it is full, and then pour in a bottle of irreproachable Bordeaux to fill up the spaces between berries and sugar. Then replace the severed part to serve as a stopper, and let it stand in a cool cellar for 24 hours. Empty then the contents into a dish, and the solemn hour will have arrived. As for the melon itself, present it to some lukewarm friend at the right season." For the combination this might be worth trying by the fruiticultural gourmet, or the members of the fruit committee, by way of a change from unsophisticated material.

In making concrete forms use well-seasoned wood as far as possible. Green wood is apt to curl up and warp and is unsatisfactory generally.

## The Nursery Trade

### American Association of Nurserymen.

F. H. Stannard, Ottawa, Kans., President;  
W. P. Stark, Louisiana, Mo., Vice-President;  
John Hall, Rochester, N. Y., Sec'y.  
Thirty-fifth annual convention to be held  
at Denver, Colo., June 8-10, 1910.

ARDMORE, OKLA.—John P. Kerr, of Sherman, Tex., has been employed by the city park board to do the landscape gardening in the parks of this city.

THE Rogue River Valley Nursery Co. has been incorporated with capital stock \$20,000. Its headquarters are at Medford, Ore., and the incorporators are F. H. Cook, D. Franklin and C. F. Cook.

### American Association of Nurserymen.

#### THIRTY-FIFTH ANNUAL CONVENTION.

There is every indication that this year's gathering of the nurserymen of the United States at Denver, Colo., June 8-10, will be both large and enthusiastic. The new secretary, John Hall, of Rochester, N. Y., is busy looking after details, and expects shortly to issue a circular letter to members setting forth the arrangements made for hotel accommodations and terms, as well as information concerning railroad rates and special offers. The Brown Palace hotel has been selected as headquarters. It is a thoroughly modern, fire-proof building, all large outside rooms, and under excellent management.

Those who know anything about "The Queen City of the Plains" are aware that it is a popular convention city and an ideal place for the assembling of an organization like that of the American nurserymen in the month of roses. The entertainment committee has not been asleep, either. Chairman Frank A. Weber, Peter Youngers and A. M. Ferguson recently met in Denver and arranged for the following entertainment to be given by the western nurserymen to the members attending the national convention of American Association of Nurserymen:

On the afternoon of June 8, the ladies will be given a sight-seeing trip through Denver and vicinity. On the afternoon of June 9, the ladies will be entertained at a matinee in one of the theaters, and on Friday, June 10, subject to the action of the programme committee, the committee has arranged for a sight-seeing trip over the Moffat route to Corona, for the members and their ladies. This is said to be the finest scenic route out of Denver, and has been styled by eminent civil engineers as the "greatest piece of engineering in the world." This trip will be complimentary to members and their ladies, and it is hoped the nurserymen will take advantage of this splendid display of hospitality on the part of their western brethren. Luncheon will be served on the trip. A special train will leave Denver at a convenient hour in the morning, returning in the late afternoon.

Other features have been arranged, and will be announced later. The western nurserymen hope that the members from the east will be well represented. Besides those already

mentioned, the members of the entertainment committee are: F. H. Stannard (ex-officio), J. W. Hill, C. G. Ferguson and George B. Fravert. Secretary Hall is exceedingly anxious that members will anticipate his circular letter and be ready to give quick response to his appeal for membership fees and for advertisements and registration in the badge-book. First come first served, is his motto.

### Early Lilacs.

#### ED. AMERICAN FLORIST:—

Among the many lilacs listed by nurserymen and florists, what varieties can be recommended most highly for early and free flowering qualities?

B. H. I.

The best early flowering lilacs are nearly all varieties of the common lilac (*Syringa vulgaris*). There are two species from China that flower about one week ahead of any of the *S. vulgaris* forms, namely, *S. oblata* and *S. Giraldi*. Amongst the varieties of *S. vulgaris*, the best single whites are Princess Alexandra, Marie Le-graye, Frau Damman and Madame Moser; single deep purple red to reddish, Aline Macquerry, Congo, Negro, Ludwig Spath, Philemon and Rubra Insignis; single rosy lilac to creamy pink, Lilarosa, Dr. Von Regel, Lovaniensis, Jacques Callot, Furst Lichtenstein and Macrostachia; single blue to bluish lavender, Colmariensis, and *Cœrulea Superba*; double white, Madame Lemoine, Madame Casimir Perier, Miss Ellen Wilmott, Obelisque, and Rabalais; double purple red to reddish, Charles Joly, La tour d'Auvergne, Marechal de Bassompierre, Colbert, and Souvenir de L. Thibaut; double rosy lilac to creamy pink, Madame Jules Finger, Rosea Grandiflora, Dr. Maillot, and Louis Henry; double blue to bluish lavender, President Grevy, Alphonse Savalle, Lamarck Monument Carnot, Michael Buckner and Doyen Keteleer. The Rouen Lilac, *Syringa Chinensis*, in its lilac, reddish and white forms, should be in all collections. The list of 41 species and varieties of lilacs alone represent a selection from a collection of 200 kinds.

JOHN DUNBAR.

### Chicago.

There has been trouble between A. J. Prost, city forester, and H. Stockman, the park board's landscape gardener, respecting tree trimming, and this reached a climax while both were inspecting the work that had been done by the tree trimmers. Prost, angered because he was not consulted about the work, as required by a city ordinance, was fighting mad when he saw what a bungling job had been done.

The only excuse Stockman could offer was that the foreman he had engaged to superintend the work had been unable to be there and the laborers went ahead and sawed off limbs and branches as they saw fit. While this argument was in progress the men, with Schmid, a local saloon-keeper, and several others, were standing in the middle of the street looking at the trees. As the language became more and more heated Schmid became alarmed. They talked it over, but not in the peaceful, deliberative way Schmid hoped they would. Several times he was forced to leave his place behind the bar to restore order.

Stockman said his only interest in the job was to provide a few days' employment for some of the park laborers whom the cold weather had

thrown out of work, according to a local paper. "I realize that Prost should have been notified," he added, "but I forgot about him being the city forester." Prost was disgusted when he saw the trees.

"One of the first principles of tree trimming," he said, "is to paint the scars over with tar or some other substance to keep out the water and rot. This was not done. The trees were not trimmed evenly, and it was a bungle all around."

The property owners signed an agreement prepared by the officers of the improvement association by which they promised to pay 75 cents for each tree trimmed, provided the work was done by experienced men. Schmid, on whom was thrown the task of making the collections, said he had not been able to gather more than half of the money that was promised. But, being a peace loving man, Schmid dug into his own pocket for the amount necessary to pay the difference. He would rather do that, he said, than kick up another fuss.

### For the Promotion of Forestry.

Augusta, Ga.—Hon. Edgar E. Ring, state forestry commissioner, has been honored as a forestry member of the advisory board of the United States Industrial and Exposition Co., which organization proposes to hold a national exposition for the promotion of forestry, which in the past few years has become quite a problem. The circular which is being sent out by the exposition says in part:

"Among the various departments of the exposition forestry will have a prominent place. The exposition will set aside a large tract of land devoted to the culture and propagation of trees suitable for the various climatic conditions of the country with special research into the best known varieties for forests, having been denuded by fires and those states included in the dry or arid period. The forestry building, plans for which are now under consideration, will be one of the most modern construction and adapted in every way to the best methods for practical work. With a unanimity never before paralleled the people of the country are demanding that a stop be put to the wholesale destruction and waste of forests."—Bangor (Me.) Commercial.

**WALTER ARMACOST, Ocean Park, Cal.**

Davenport, Ia.

Business during Lent, up to the present, has been very satisfactory owing to the large amount of funeral work, with enough stock on hand of good quality to meet all demands. The sale of bulb stock this winter has been very discouraging and in consequence a great many of the boys will cut down their orders for next season. Business prospects for Easter are very bright, with enough stock in sight to meet the demand. Easter lilies were somewhat backward, but with the present bright warm weather they are all coming fine.

The March meeting of the Tri-City Florists' Club was held on the evening of March 3 at the home of Henry Pauli and was well attended. The subject for the evening's discussion was "New Varieties of Carnations and Roses and the Care of the Same." The committee on the annual banquet reported everything in readiness for the grand event, which will be on a larger and finer scale than ever before attempted. The beautiful club house will be given over to the use of the florists for that night only, and after the banquet a ball will take up the remainder of the evening. The annual election of the club took place and the following officers were elected: Otto Boehm, president; Henry Pauli, Henry Gaethje and Henry Staack, vice-presidents; Wm. Knees, treasurer; John Temple, sec-

retary; Theo. Ewoldt, financial secretary; Harry Bills, A. Anderson and Ludwig Stapp, trustees. The newly elected officers gave several interesting talks and a fine supper was served. An invitation to meet with Henry Gaethje was accepted and the next meeting will take place at his home April 14.

### NOTES.

John Temple is out making stump speeches these days. Uncle is running for park commissioner on the republican ticket and every member of the Florists' Club wishes him elected.

Henry Pauli will build three modern houses this spring each 27x105 feet to take the place of several he will tear down.

Ed. Patton has resigned his position as grower for Miss Woltmann and has accepted a position with Ludwig Stapp.

Ludwig Stapp is busy building a fine large brick boiler shed and two rose houses 27x300 feet.

Don't Get Left --- Last Call On Rooted Cuttings, April Delivery

You still have one opportunity to get a stock of rooted cuttings of our splendid new Carnation Dorothy Gordon, for fall and winter trade. Early orders took our entire stock during February and March, but we offer a limited quantity of fine rooted cuttings for April delivery—which, from past experience, however, won't last long. Meanwhile our

# Carnation Dorothy Gordon

has added to its laurels: At the Toronto show, just closed, a gold medal was awarded to this splendid carnation when exhibited in competition with others. Carnation Dorothy Gordon is a winner—a winner of prizes and a winner of profits, as our customers are learning. Some of its merits are: strong constitution—absolutely free from disease; wonderful productiveness—50% more flowers than Enchantress; good color—clear uniform pink; splendid form and keeping qualities—flowers last four and six days after cutting; and enormous size—averaging three inches in diameter. We know of no other variety possessing all these strong qualities. Order NOW some of the splendid stock we offer for April. Prices remain the same—\$10.00 per 100; \$75.00 per 1000—and you'll find long before the season is over, that it was the best investment you made this year. If you want to investigate first, come to see us, or write for particulars—but don't delay, for the stock won't last.

JOSEPH HEACOCK COMPANY, Disseminators, Wyncote, Pa.

CHRYSANTHEMUMS, Rooted Cuttings and 2½ in. Good commercial varieties. Price lists will be mailed on request.

Poehlmann Bros. Co., Morton Grove, Ill.

Morristown, N. J.

The preliminary schedule of the Morris County Gardeners' and Florists' Society's fifteenth annual flower show, to be held in conjunction with the Chrysanthemum Society of America, November 2-4, 1910, has been mailed and anyone who has not received a copy, but is desirous of doing so, should write at once to Secretary Edward Reagan, Box 334, Morristown, N. J., and secure it. The schedule lists prizes amounting to \$2,500, including a sweepstake cup valued at \$150. The prizes in the cut bloom classes are good and there are a great many specials which will doubtless be added to considerably before the show.

Mention the American Florist when writing

## Toronto.

## TRADE GOOD.

The general tone of business is good; the usual dull period during Lent has not been very noticeable and, even at this early date, the outlook for a big Easter is very promising. Excepting in American Beauties, of which there are very few good ones to be had, there is a plentiful supply of all varieties of roses and of excellent quality. During the past week the weather conditions have been ideal and stock has greatly improved as a result. Carnations are both plentiful and good, bulbous stock in unlimited quantities and flowering plants plentiful enough to give the stores a decorated appearance.

## NOTES.

At the executive meeting at St. Catharines of the Canadian Horticultural Association the coming week the existing duty on plants will be an important question. There is a feeling prevalent among growers that they do not know what they really do want. In speaking to some of the largest palm growers they are quite satisfied with the existing duty and want it to remain. It was only a few years ago that the duty was put on and local grown stock has not as yet had time to grow large enough to compete with the imported stock. It would therefore seem better not to remove the duty until they are in a position to know where the advantage lies.

P. J. Fogarty & Sons have a fine lot of shamrock for March 17. As this is their national flower, they are always proud to have as good stock as can be found on the market.

Grobba & Wandrey have been busy with decorations for the spring openings for the department stores; the displays in flowers are getting more elaborate each year.

Local men who have been making the rounds claim they have never seen stock look in better shape for Easter and that lilies will be very plentiful.

Jos. Boston has found the automobile so useful that he is getting a more up-to-date model for his business.

Frank Smith, formerly at Dunlop's retail store, is now located with the Connan Floral Co., of Hamilton.

Geo. Abbs has a house of sweet peas from which he is cutting excellent blooms. H. G. D.

## Nashville.

The Nashville Seed Co., of which J. J. Odel is manager, has filed a petition in bankruptcy in the United States district court. The liabilities are \$7,297.79; and assets, \$5,245.20. A majority of the creditors are non-residents.

L. Haury & Son, Arnold Schmidt, the Mount Olivet Conservatories, the Belmont Conservatories and the Lischee Greenhouses were all represented in the market on Saturday.

Geny Bros. have had almost a glut of California violets the past week. They have also had fine sweet peas. The lavender pea has been very popular and quite plentiful.

With the thermometer climbing to 80°, and spring in the air the desire to possess a sweet smelling flower has taken possession of the public generally.

McIntyre Bros. were showing a very pretty lot of pot plants and cut flowers, noticeably violets. Their violets have done well this season.

M. C. D.

WAYNESBORO, PA.—Henry Eichholz has received a shipment of English carnations for trial. His Carnation Alvina, is reported a success in that country.

## Headquarters for

## EASTER PLANTS

Prepare for Easter. From Whom Will We Purchase Our Easter Supplies?  
An Immense Stock of Choice Easter Plants Now Ready for Immediate Shipment.  
Blooming Easter Week or Before if Desired.

**Azalea Indica.** Don't be bluffed. Be careful, consider what you buy, and from whom you buy. We are the people in Azaleas. Have the real thing. Why? We make a specialty of importing Azaleas. Have sufficient capital to buy for cash in Belgium. Therefore we get the Cream of Belgium production. Full of buds and foliage, a picture of health.

## AZALEA INDICA

We are headquarters for these plants for the past twenty-five years. We make a specialty of importing large quantities of this so well known favorite Easter novelty. Grown for us in Ghent, Belgium by an Azalea specialist. Have now three houses full of the choicest. Only well known American varieties are imported. They are planted in the fall, as soon as they arrive from Belgium, into 6, 7 and 8 in. pots placed in greenhouses and kept cool during winter. They are now in excellent condition, covered with buds, just right for Easter.

Please bear in mind facts mostly unknown to some Azalea growers that fully 30 to 40 per cent of the newly imported Azaleas in dormant state will lose their buds and foliage during the long transportation of the sea voyage and during winter up to Feb. 1 and have to be kept over for another year.

We only ship good stock and full of buds and flowers, and therefore you can't expect Azaleas at this time to be as big and as cheap as if you would buy them in dormant state in the fall.

What is the name of the best double pink Azalea? Mme. Van der Cruyssen is the name. Originated by the well known Azalea specialist Mr. Van der Cruyssen of Belgium. Millions are raised every year and shipped into every part of the globe from Belgium. We have a big stock on hand of this well known variety. Every plant is as round as an apple, covered with buds, just right for Easter. Have all sizes, 75c. \$1.00. \$1.25. \$1.50. \$1.75 to \$2.00 each.

In large sizes we have the following varieties, full of buds: Bernard Andreas Alba, pure white; Niobe, double white; Helena Thielmann, pur light pink, very fine; Souv. Memoire de Van Houtte, very large flowers, double pink; Empress d'Indes, large flowering, double variegated; Dr. Moore, double pink; Mme. Van der Cruyssen, best of all the pink; Apollo, red; De Schryveriana, double, large, variegated. Price, \$1.50, \$2.00, \$2.50 to \$3.00.

In smaller sizes we have the following varieties, full of buds: Mme. Van der Cruyssen pink; Deutsche Perle, pure double white; Vervaneana, double variegated, one of the old standard varieties; Apollo, red; Simon Mardner, double pink; De Schryveriana, large double variegated; Empress d'Indes, double variegated; Niobe, double white. Price, 60c, 75c, \$1.00, \$1.25 to \$1.50. Professor Wolters a well known variegated bright variety, at \$1.00, \$1.25 to \$1.50.

When we are out of one color we send the next similar color; also if we are out of the size ordered, we send the next size, either above or below the price mentioned.

**Moonvines** (*Ipomæa Multiflora*), best white Moonvine, for which we have a world-wide reputation now ready, 2 1/2 in. pots, \$5.00 per 100.

**Begonia New Improved Erfordi**, 5-in., \$2.00 per doz.; **Begonia Flambeau**, 5-in., \$2.00 per doz.

**Spiræa Gladstone**. This variety, owing to the dry summer in Holland last year, is very scarce this Easter, but we were fortunate enough to secure sufficient to fill our usual house, and the plants are now in fine condition, full of buds, just right for Easter. 6-7 in. pots, 75c to \$1.00 each.

**Primula Obconica**, 5 in. pots. \$2.00 to \$2.50 per doz.

**Double Daffodils**, Von Sion best yellow, 3 double-nosed bulbs in a 6 in. pot, \$2.50 per doz. pots.

**Tulips**, Murillo (double pink) 3 bulbs planted in a 4 in. pot, \$2.00 per doz. pots. **Tournesol Tulips** (double variegated), 3 bulbs in a 4 in. pot, \$1.50 per doz. pots; ready in bloom for Easter.

**Hydrangea Otaksa**, already forced into buds, just right for Easter, 6-7 in. pots, 35c, 50c, 75c, \$1.00 to \$1.50 each.

**Kentia Forsteriana**, 6-7 in. pots, 35 40 50 in. high, perfect leaves, \$1.25 \$1.50 \$2.50 to \$3.00; 4 in., 20c. **Kentia Beilmorana**, 6 in., large stock, \$1.25 to \$1.50; 4 in., 20c to 25c; 3 in., 10c.

**Ficus Elastica** (Rubber), 5 1/2 to 6 in. pots. 25c to 30c.

**Areca Lutescens**, 5 in. pots, three plants in a pot, 35c.

**Whitmani Ferns**, 7 in., 75c to \$1.00.

**Neph. Amerpohli**, 5 1/2, 5 1/2 to 6 in. pots, 30c, 40c and 50c; 6 in., 60c to 75c.

**Cocos Weddelliana**, 3 in., 15c.

**Ferns for Dishes**, \$3.00 per 100.

If you would know the fairest sight your eyes can ever see,

Where the most perfect plants are grown, to Aschmann's come with me.

Why! Ne'er since flowers began to bloom was such a glorious show

Of all the best that florists need found in one place to grow.

The lilies are the very best yet seen on Easter day, Azaleas are whole sheets of flowers, perfect in every way.

The Araucarias matchless are, so are the ferns, all green.

With bulbs and plumed Spiræa, the best you've ever seen.

And Aschmann gives a challenge, let every florist hear.

For flowers or prices, either, no rival does he fear.

If you wish to gather dollars, like violets in the spring,

Then send your largest order, his plants the cash will bring.

## Easter Lilies.

Have Lilies to Burn in good shape.

**Lilium Multiflorum**, the genuine Japanese Easter Lily, directly imported by us. We have a friend in Japan who looks after our interests there. He picks out for us only the good, healthy ones, and marks them while they are growing, the 10-in. bulbs, and therefore he ships us the cream of the plants of Japan. We have Lilies this year to burn; can supply, if nothing happens, every customer and others who want Lilies. 9 to 10 in. bulbs of Lilies were difficult to get from Japan last fall, but we were one of the fortunate ones to receive all the 9-10 in. Lilies (5,000) ordered last spring, 1909, from our grower in Japan. If you see them growing in our greenhouses, you must all admit they are "cracker-jacks"; we sell them cheap, too. Where other florists get 15c per bud, we only charge you 10c per bud for plants in 6 in. pots, having 5, 8, 10 and more buds to the plant. Plants under 5 buds, 12c per bud, 6 in. pots.

When ordering lilies a reasonable amount of other plants should be taken. We do not solicit orders for lilies alone.

**Hyacinths**, 4 best colors, King of the Blues, Grand Maitre (light blue) La Grandesse (best white), Gertrude (best pink), 4 in. pots, \$12.00 per 100.

**Asparagus Plumosus Nanus**, 3 in., \$5.00 per 100 2 1/2 in. 3c; 4 in. 10c. **Asparagus Sprengeri**, 3 in., large plants 7c; 4 in., 10c.

**Cineraria Hyb. Grandiflora**, H.F. Michell's new improved strain. Our plants of this strain are twice the size of those of other years, with perfect, large, green foliage. Some of the plants are almost as large as a bushel basket. 6 in. pots, 25c, 35c, 50c, 75c to \$1.00 each.

Have an Immense Stock of Easter Plants.

This is our catalogue.

Please state if in or out of pots. All goods must travel at purchaser's risk only. Cash with order, please. No references will be investigated.

#### Solanum Wendlandi in Small Pots.

As long ago as 1882 *Solanum Wendlandi* first reached this country (England) according to Gardening Illustrated, a plant having been sent by Director Wendland of the famous Botanic gardens at Herrenhausen to Kew, where it soon attracted attention by reason of the great beauty of its inflorescence. It was first treated as a stove climber, and in the tropical water lily house, and afterwards in the warmer portion of the succulent house it formed a magnificent summer feature. Then it was tried with success in the Mexican portion of the temperate house, and in the greenhouse No. 4, where it has this season been remarkably fine.

This solanum was sent to Kew with the information that it came from the colder regions of Costa Rica, where it climbs upon trees. Such being the case, it is no surprise to learn that it will thrive in a greenhouse—indeed, it has proved to be hardy, or nearly so, in some parts of the favored southwest, and has also flowered outdoors during the summer in other places. As usually grown, it has proved to be so vigorous a climber that a large structure is necessary to its well doing, but within the last few years dwarf-flowering examples have been shown at the different summer exhibitions. A particularly fine exhibit was that put up by W. J. Godfrey, of Exmouth, at the last Holland Park show.

In order to obtain these dwarf flowering plants, cuttings should, towards the end of the summer, be formed of the points of the stout, well-ripened shoots such as would under normal conditions flower well next year. Although these small-flowering plants of *Solanum Wendlandi* are very beau-

## Mrs. C. W. Ward

Mrs. C. W. Ward is a perfectly formed flower, with full center; color, deep pink, several shades lighter than Lawson, deeper than Winsor; having strong, erect stems 24 to 36 inches in length. A vigorous, healthy grower, and has never shown disease of any kind.

Price, Rooted Cuttings:—\$2.00 per 12; \$12.00 per 100; \$100.00 per 1000; 25 at the 100 rate; 250 at the 1000 rate.

Plants from 2-inch pots, \$15.00 per 100.

ALMA WARD ALL SOLD.

## Cottage Gardens Co., Inc.

QUEENS, LONG ISLAND, N. Y.

tiful and extremely useful for grouping, one must not overlook the great decorative value of this plant for large and lofty structures. Other members of the solanum family that are most desirable as climbers are *Solanum jasminoides*, *S. Seaforthianum*, and *S. pensile*, with the rambling-growing *S. crispum*, which forms such an attractive wall plant in some of the warmer parts of the country.

NEW ORLEANS, LA.—Harry Papworth was at Pensacola, Fla., March 4, where they catch those 300-pound croupers. Harry is probably fixing up something for the Rochester convention.

#### Have All Kinds.

Shopwalker (at the "anything from a needle to an anchor" sort of establishment)—"What can I do for you, madam?"

Lady—"I want to see some Brussels—"

Shopwalker (energetically)—"Yes, madam, carpets or sprouts?"

#### Studies in Still Life.

"I want a few colored illustrations of beets and tomatoes."

"Life size?" inquired the artist.

"Catalogue size," replied the seedsman, with a significant smile.—Louisville Courier-Journal.

CORFU, N. Y.

Cleveland.

**TRADE PICKING UP.**

Business has picked up since the beginning of the month, we having had some very springlike weather for nearly a week. Carnations, although lower in price, have cleaned up the last few days for the first time since the glut commenced. Everybody is looking forward to the Easter business and already inquiries regarding stock for this day are coming in. The outlook for Easter lilies does not seem any too promising; of other flowers we hope there will be enough for all demands. Callas are a drug on the market and cannot be sold at any price. All other stock seems to be in sufficient quantity to meet all demands and is of excellent quality.

**NOTES.**

Frank M. Smith of Smith & Fetters has returned from a two months' trip through New Mexico, Texas, California and the city of Mexico. He reports having had an excellent and very enjoyable time and, to say the least, looks the part, for his health has greatly improved. He also reports having met more people engaged in the florist business than ever before on any of his trips.

The Bertermann Bros. Co. of Indianapolis, Ind., sent to Smith & Fetters a fine vase of the new yellow carnation James Whitcomb Riley, and this has been on exhibition in their show window for the past few days, where it has caused a great deal of comment among the flower buying public and growers who have chanced to see it.

The Newburgh florists who lost their savings in the bank failure recently have not heard as yet how they will come out. Most of them have a good crop of cut flowers and plants coming in for the Easter trade which will help them some.

The Higbee Co. will open its new store on Euclid Avenue March 14 and, as usual, a quantity of cut flowers,

# Mary Tolman

Deep flesh that does not fade in the strongest light; clean grower; rigid stem; perfectly formed flowers; good producer.

Springfield, Ill.**CHICAGO CARNATION CO.**  
Joliet, Ill.**JUANITA, (Wah-nee-ta)** A grand scarlet Carnation, with about a 3½-inch flower, well built up with a two foot stem.

**Its Strong Points Are:** Abundance of large, high grade flowers at all times; stem very stiff with good habit in every way, keeping qualities are wonderful; burst blooms are rare. We have grown it 6 years and will still grow as many as we have now. We have **never over propagated** it, so its vitality is not impaired. Cuttings will be taken from flower stems which are the best. The color is so bright and rich it takes with every one. We have a very large stock. **Price:** Rooted cuttings \$8.00 per 100; \$60.00 per 1000. Special price in large lots. Unrooted stock half price. A discount of 5% for cash.

**GEO. M. EMMANS, Newton, N. J.**

**Boston.**

A QUIET WEEK.

The week as a whole has been rather quiet and the markets overstocked in many lines. There was considerable funeral work to help early in the week. Violets are coming in faster than they can be taken care of, but the favorable weather makes an outlet for the surplus through the street fakirs. Roses are fairly plentiful with the exception of the best quality; they are rather short. Medium and short grades are coming in freely. Beauties still remain scarce and prices hold up. Carnations are coming in rather strong and prices have broken a little. The several varieties of red seem to be especially plentiful and drag considerably. Valley is coming in strong with the demand off a little. Cattleyas and gardenia are plentiful enough to meet all demands. Yellow marguerites are coming a little more plentiful just now and of better quality. This is the one flower that is never quite as free in the winter as the store men would like; it is always a good seller and splendid keeper. The plant trade holds up well and the market offers some very attractive specimens, including lilacs, rhododendrons, acacias, genistas, heaths primulas, etc. The wholesale houses report the out-of-town trade as good but the local business as being a little quiet.

NOTES.

Norris Comley has charge of the decorations at the automobile show now going on. Mr. Comley has been most successful in former years in this line of work and while the present show is perhaps the greatest ever held here from the auto standpoint, the decorative effects are correspondingly fine.

The H. M. Robinson Co. is introducing several novelties in the line of green goods for the retailers' use. A visit to its stalls at the markets is quite instructive and one is surprised

at the extensive variety of fine goods to be had in the green line.

James Wheeler, formerly gardener for Joseph White of Brookline, has purchased 30 acres of land fronting on Worcester street, Natick. He will immediately build a range of houses for the growing of carnations and miscellaneous pot plants.

There is a very lively interest among the retailers regarding the approaching St. Patrick's day. The demand for novelties is increasing every year and this year seems to run on artistic little green jardinières and small baskets filled with shamrock.

A. Montgomery, the well known rose grower of Natick, is confined to his home as the result of a recent shock. His condition is quite serious but his many friends hope to see him up and around again before long.

Estey Bros. are bringing in the first of their Roman anemones. This firm has made a specialty of anemones for several years, and has a good trade in them.

Wm. Nicholson is starting in again with a crop of giant mignonette. This flower is being appreciated more every

### STORE OPENINGS HELP.

Weather conditions the past week have undergone a great change; from good sleighing on Monday it has thawed and we are now enjoying good spring weather with every wish that we may have the same for Easter which seems such a short time until we will be looking for more days to complete our work. The supply of flowers of all kinds is good. Bulb stock of all kinds is very plentiful, with roses and carnations also in profusion. Trade has not been rushing with the exception of the opening of a new dry goods store on Friday. That gave some of the retailers an opportunity to get rid of surplus stock. The decorations were in charge of S. A. Anderson, who had a large number of plants, also baskets and bunches; these, together with those furnished by other retailers, made the week end good. Saturday found another lot of bargains in violets and carnations. Advance orders for Easter are coming in which makes all feel hopeful.

The election of officers, banquet and flower show of the Florists' Club last Tuesday was very successful. A nice

# A Rose for Every Greenhouse

## GRAFTED ROSES

**JOS. H. CUNNINGHAM,** Delaware, O.

lot of carnations, roses and Primula obconica were sent by local growers, filling one room of the Iroquois hotel and making a nice display. The election of officers resulted as follows:

Joseph Streit.....President  
Otto Gillis.....Vice-President  
Wm. Legg.....Secretary  
Charles Sandiford.....Treasurer  
S. A. Anderson, W. J. Palmer  
and L. H. Neubeck, Trustees.

The banquet was the most successful ever held, 53 being present. Retiring President Slattery was toastmaster and he also read his paper on "Color Harmony," which was very much appreciated. A request was made that he read it again at our next meeting where it will be discussed, other events not permitting it at that time. Mark Palmer and Otto Gillis arranged lantern slides of all the florists in all kinds of comical positions and poses relating to the business and bowling which afforded a

# SHAMROCK

great amount of pleasure. Each picture was announced and properly described by L. H. Neubeck as only he could do. A number of telegrams were received by different ones from their friends giving advice, orders and making requests which created a great amount of fun. There were no set speeches, but President Slattery, President-elect Streit and the other officers, W. J. Palmer, W. F. Kasting, S. A. Anderson, F. C. Good, L. H. Neubeck, W. H. Grever and W. A. Adams made a few remarks, their brevity being appreciated. BISON.

Telephone: Lenox 5644

## THE BEST WAY

to collect an account is to place it with the

## National Florists' Board of Trade

86 Pine Street, NEW YORK.

WHY? Because many debtors will pay the Board fearing otherwise a bad rating in our Credit List. Full information as to methods and rates given on application.

If you want to get the want you want to get, you want to get your want ad into the

AMERICAN  
FLORIST

Try it now.

Every advertisement represents a genuine want. It pays to answer them.

Cattle Manure in Bags  
Shredded or Pulverized

Pure - dry - uniform and reliable. The best of all manures for the greenhouse. Florists all over the country are using it instead of rough manure.

Pulverized  
Sheep Manure

Absolutely the best Sheep Manure on the market. Pure manure and nothing else. The best fertilizer for carnations and for liquid top-dressing. Unequalled for all field use. Write for circulars and prices.

For St. Patrick's Day

Ajax Flower Dye

(Green)

Pints, 60c; Quarts, \$1.00,  
by express.

For Easter

We have a full line of all seasonable supplies, including many novelties.

**"Send Us Your Orders"**

and we will fill them in such a way as to insure you future orders.

MASTICA

FOR Greenhouse Glazing

USE IT NOW.

F. O. PIERCE CO.

12 W. BROADWAY  
NEW YORK

MASTICA is elastic and tenacious, admits of expansion and contraction. Putty becomes hard and brittle. Broken glass more easily removed without breaking of other glass, as occurs with putty. LASTS LONGER THAN PUTTY.  
Easy to apply.

Ammoniated Lawn Lime

Kills Weeds.

Makes Grass Grow.

Applied as a light top dressing to lawns it kills all flat leaved weeds such as Dandelion, Daisy, Plantain, Sorrel, Chickweed, Moss, etc., in 48 hours and without other fertilizer produces a wonderful, luxuriant, rich, green growth of lawn grass—which is distinctly noticeable 50 feet away.

The use of Ammoniated Lawn Lime supersedes hand weeding of lawns, putting greens, etc. It saves the grass from being pulled up and in many cases ruined. Grasses take a new vigorous growth, avoiding probable trouble in the future.

Quantities:

If very weedy 1-lb. to 40 square feet, 25-lbs to 1000 square feet, (20x50). Half to one-quarter amount if moderately weedy.

ABSOLUTELY GUARANTEED.

Money refunded if not satisfactory.

We want Seedsmen or Florists as agents and distributors in every important city and town.

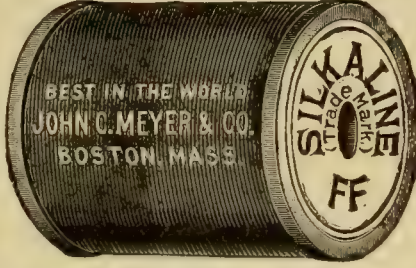

Retail Prices:

2-lb. cans, 25c, 50 cans per case. 5-lb. cans 50c, 20 cans per case. Bags, 25-lbs. \$2.00; 50-lbs. \$3.50; 100-lbs. \$6.00; 1000-lbs. and over 5c per lb.

Descriptive circular and wholesale prices on request.

**SUPERIOR CHEMICAL CO.,**  
(Incorporated Manufacturers.)  
**Louisville. Kentucky.**

The "Meyer Green Silkline"

is the only Green Thread that should be used by florists and growers. It is guaranteed full weight and full measure.

Also Violet Thread for tying up Violets. Price of both, \$1.25 per lb. express or freight paid in good sized orders.

**JOHN C. MEYER & CO., 1449 Middlesex St., Lowell, Mass.**

Evergreen Brand Flower Fertilizer.

A Pure Plant Food immediately available. It permanently enriches the soil. It prevents the onslaught of plant diseases or insect pests. Can be used at any time during the growing season, dry or in solution. Put up in 12 pound cans, Price, \$2.00 each.

**For Sale by Leading Jobbers**

Further information can be obtained from

**D. D. JOHNSON CO., 64-66 Wabash Ave., CHICAGO.**

**Manufacturers,**

The Mastin Automatic Whitewash and Spraying Machine

Is Reliable, Practical and Durable

The tank is made of galvanized sheet steel, and in brass. The pump is of brass throughout, simple and powerful. The mixing device keeps the contents of the tank well stirred up from start to finish.

When the machine is filled to within six inches of the top, a few strokes of the pump will compress enough air in the tank to produce a continuous mist-like spray for 15 minutes.

All parts are made to gauge and may be had for repairs.

Ask your dealer about our **Extension Hose, Extension Rods,** and the **Mastin Whitewash Nozzle** for Bordeaux mixture.

Sold through Seedsmen, Dealers in Florists' and Poultry Supplies.

**J. G. MASTIN & CO, 3124 West Lake St., CHICAGO, ILL.**

PITTSBURG, PA.—The largest Ameri-  
can flag in the world, 80x160 feet, is  
now being used for shading Easter  
lilies at Schenley park in the Phipps  
conservatory.

## The Superior Standard

RETURN FLUE FIRE BOX BOILER

contains more heating surface, and less water space than any other steel boiler.  
2/3 of the heating surface is in the tubes.

Ask the  
man that  
knows the  
one using  
different  
style boilers  
—names are  
yours for  
the asking.

After using  
our boiler  
one season,  
you will say  
like all  
others:  
Nothing but  
"Superior"  
for me.

This boiler has given better satisfaction than any other boiler on the market  
MADE IN NINE (9) SIZES FOR HOT WATER.

Send for catalogue and list of growers that are using this boiler.

THE SUPERIOR MACHINE & BOILER WORKS, 840 -850 Superior St., Chicago.

## THE KROESCHELL BOILER

is the only perfect  
HOT WATER BOILER.

We manufacture every type of boiler in use,  
but our greenhouse boiler, because of its  
special construction, possesses many advan-  
tages over any other type.

Prices and catalogue on application.

### Oleander Poisoning of Live Stock.

The oleander is used as an ornamental plant in the southwestern part of the United States, while in other sections it is grown as a house plant. That the practice of growing this shrub outdoors is attended with considerable danger to live stock is clearly brought out by F. W. Wilson in a recent bulletin of the Arizona Experiment Station. It is pointed out that the plant is dangerous to human beings, since many persons, and especially children, are apt to chew leaves, flowers, and small sticks. Experiments made were with two horses, a cow, a mule, and several sheep, and included trials of green and dry leaves, flower stems, parts of the branches, bark, and roots. The material was administered in the crude, dry and green form and as an infusion. The results are summarized as follows:

"Oleanders are poisonous when eaten by common farm animals. The manner of obtaining the poison is generally accidental and its presence is not usually known until death is approaching. Dry leaves are poisonous as well as green leaves. There is little danger of the animal obtaining the poison from leaves in drinking water. The amount of poison necessary to cause death is small, but depends also on the condition of health of the animal. The physiological effects of oleander are similar to those of digitalis, and if enough poison is obtained the patient is sure to die.

"The amount of oleander necessary to cause death in horses ranges from 15 to 20 grams of green leaves and from 15 to 30 grams of dry leaves. This depends on the condition of the animal at the time the poison is obtained. A full stomach will necessitate more poison. In the case of cows it is safe to say that from 10 to 20 grams of green leaves and 15 to 25 grams of dry leaves are sufficient to cause death. For sheep the fatal dose of either green or dry leaves is from one to five grams. There is little danger in the bark, roots, or flowers, since live stock would hardly obtain sufficient poison in that way."

452 W. Erie St., CHICAGO

## The Kroeschell Boiler

Was installed to Heat Over 9,000,000 Square Feet of Glass During the Past Four Years. : : : :

## The Kroeschell Boiler

Replaced Over 1,500 Cast Iron Boilers in the Short period of Six Years. : : : :

## Expressions of the Men who Know:

### Kroeschell Boilers Are Not Over-Rated.

Our heating system works to perfection. To our surprise the new No. 8 boiler mastered the whole plant, consisting of five houses 20 x 150. We only deemed it necessary to start our second boiler when the temperature went down to 8° below zero.

We had expected to use both boilers in cold weather, but the one boiler did such excellent work that we did not run the two boilers until December 5th when the very cold weather set in.

It was a very easy matter to keep the temperature up in the very coldest weather and stormiest nights.

The five houses have 20,500 square feet of glass. the No. 8 boiler is rated at 16,500 square feet of glass.

**MUELLER & SCHROEDER CO.,**  
926 9th St. Milwaukee, Wis.

The Kroeschell Generator.

## THE KROESCHELL PIPING SYSTEM

Circulation is perfect.

Cheaper and better than 1, 1 1/4, 1 1/2 or 2-inch threaded pipe.

Overcomes all the disadvantages of 4-inch cast-iron pipe.

No deep boiler pits required.

## THE KROESCHELL GENERATOR

Cures sluggish circulation.

Water travels three to five times faster.

Saves fuel.

Prevents boiling over.

Water can be heated to 240 degrees without boiling, making it possible to have steam temperatures in your piping if wanted.

Greatly improves systems having long mains and coils.

Can be connected to any hot water system, no matter what kind of boiler or piping is used.

Easy to install—simply attach to your present expansion pipe.

## SUGGESTIONS FOR EASTER

### Easter Preparations.

There is every indication that the coming Easter will be one of the best on record. We are just emerging from a cold winter and the spring-like feeling will unloose the purse strings. Business generally is good and there is absolutely no reason to fear anything but a good all around holiday trade. To do this we must be prepared. It will not do to wait until the orders come in before seeing to it that abundant stocks of cut flowers, plants, baskets, ribbons and the hundred and one little sundries that are needed are on hand. Lilies, for instance, are among the most important items for Easter sales. If not already done the retailer should take a look around his growers' stocks, select what plants he needs and have them saved for him. For there will not be too many lilies this year. The date is early and growers who did not begin forcing Giganteums early are so far behind that they have already given up all hopes. Harrisii has in many places been extremely disappointing. We hear of one grower who purchased 5,000 bulbs and gave them the best treatment he knew who will not have 100 good plants for Easter. There will be many thousands in, of course, in all the principal centers of production as well as with local growers but they will be all wanted and more.

The price, too, will be comparative-ly high and this will lead to a better demand for moderate priced plants and cut flowers of quality. Azaleas are always popular at Easter and here we may mention a very good idea noted in regard to decorating these plants. An ordinary colored mat, such as is sold by the thousand for the purpose is tacked around a wooden pail or tub of small size. The pots of azaleas, rhododendrons, hydrangeas, rambler roses or any other kind are simply placed inside this tub and there you are. No tying, no possible chance of the mat slipping off and the appearance as good as it is pos-

sible to make it. One thing with regard to these mats should be noted. We often see them of glaring colors quite out of contrast with the flowers of the plant they are supposed to decorate. This is bad color combination and must be eliminated. We will not here go into the matter of color harmony. It is well treated on in the excellent paper that appears on page 365 of this issue by a past master in this art. But we would like to mention what struck us as a very beautiful combination last year. This was a mat of a kind of silver grey wrapped around combination pots of lily of the valley and yellow daffodils. The rather pale green of the lily of the valley foliage, the deeper tint of the daffodil leaves, the yellow flowers and the silver cover were exquisite and it is well worth repeating.

### Rambler Roses.

Among Easter plants outside of lilies there is probably nothing so beautiful or so popular as the rambler roses. There are so many varieties now that the retailer who wishes to have as good a stock as his neighbor must have a good selection of them. It would be hard to say which is the best rambler rose for Easter there are so many good ones. But we must confess to a strong predilection in favor of Lady Gay. It is without doubt one of the finest introductions of recent years and has become extremely popular. Grown any way and in any style it is beautiful, but in none more so, we think, than in natural form, its shoots pinched only enough to keep it in some semblance of a shapely plant. The lateral shoots on which the flowers appear are just strong enough to hold the flowers at the right pose without being stiff on the one hand or too loose on the other. But there are many customers who prefer plants trained either fan-shaped, globular or pyramidal and when this is the case these must be catered to. One well known firm of plant growers at least is sending this rose out in umbrella form and this

will doubtless prove popular with customers who like something novel.

Dorothy Perkins is too well known and too generally liked to need any praise from us. Its free flowering, good habit and its delightful soft coloring make it a favorite everywhere. Not perhaps quite so well known but a most beautiful thing is Tausendschon or Thousand Beauties. In this lovely rose all tints are displayed from rosy white to deep rose in the buds and opening blooms. It does not bear forcing so well as some other varieties but careful growers who started it early and brought it along steadily are in good time with it and such men will have it at its freshest and best for Easter. No retailer should be without a few plants of "Thousand Beauties." The various dwarf or "Baby" ramblers are exquisite little plants, either for use in baskets or as single plants in any of the pretty little pot covers and other devices that are now so popular. They come in various colors, almost all of the popular ramblers having its dwarf counterpart. Among the more recent novelties there are several beautiful things. Newport Fairy is a charming single with most exquisite coloring. Hiawatha is another popular good thing and all these help to give a variety to the stock. The old Crimson Rambler has lost some caste but is still a good seller and, as far as we are aware, unbeaten in its color when grown under glass. We never recommended it highly as an outdoor rose on account of the poor color of its foliage except under the most favorable conditions, but under glass forced gently it is a grand old rose.

#### Cut Flowers.

In giving a retailer advice on handling cut flowers we feel in something the position of the college boy who explained to his grandmother how to perforate the base and apex of the egg before withdrawing the contents, but we hope, at any rate, our remarks will be taken as kindly as they were by the dear old lady. Many retailers, we are convinced, lose a great opportunity of educating the public to be flower buyers by maintaining a very high price on cut flowers at times of special demand. "They only come here at holiday times and we've got to soak them," said a retailer to the writer at Christmas. Now, this is the wrong spirit. There will be plenty of flowers for Easter in all probability and if the wholesaler, the grower and the retailer would combine, not to inflate prices, but to endeavor to move all the stock at a good profit, then a fine show could be made in the retailers' windows, the public could buy their supplies at a reasonable rate and there would not be such a number of fakirs around selling at ridiculously low prices on the streets. We know that prices and profits cannot be figured down to a system as they can on some other goods. Department stores have tried that and many of them have signally failed. Flowers and plants are living, perishable things, and cannot be preserved, refrigerated and held for high prices as are many other necessities of life. But is the florists' trade of our great

country to pass into the hands of Greek ice cream vendors, who buy with spirit and take chances on selling at ever so small a profit, or are the legitimate florists going to keep their end up? Good business men in the retail end are watching this. They are advertising their prices, both in local papers and by signs in their stores, and they are getting the business while the man with the one idea—that of "soaking" his customers, is standing behind his counter and wondering when things are going to live up a bit. Think it over. There is more in it than meets the eye at first and we must have better methods if the business is to remain on a sound footing.

Bridal Bouquet by Canger & Gormley, Chicago.  
Made of White Orchids (Phalaenopsis Amabilis).

#### Foliage Plants, Ferns and Palms.

There are always customers for ferns and foliage plants at all holidays. It is true that they see these, more or less, all the year around, but people of moderate means are apt to consider the lasting qualities even of an Easter present and many a careful housekeeper is more pleased with a nice palm, Boston fern or rubber plant that will form a decorative feature in a room for many months than the finest bunch of American Beauty roses or the beautiful but fleeting Easter lily. Then there are quite a number of small, brightly tinted foliage plants of the croton, dracæna and pandanus type that are necessary for making up in small decorative devices, baskets, etc., to say nothing of the small ferns and palms, such as Cocos Weddeliana, Geonoma gracilis

and Phoenix Roebeleni for fixing up fern dishes and table ferneries. All these must be on hand to show customers or a good deal of the best class of trade will be lost. As to varieties it is not necessary here to go into them. There are many of them grown in quantity by the plant specialists and an early visit to their establishment when this is possible or a look through their lists will put one on the right track to a well furnished stock for the great day.

#### Miscellaneous Flowering Plants.

Among miscellaneous plants flowering at Easter the azalea takes a high place. As noted above it needs something to set it off, as it has a flat appearance used alone. Mme. van der Cruysen, Vervaeana, Niobe, Bernard Andreas and its white form (Alba) and Professor Wolters are all good and there are several dwarf, small flowering kinds, probably relatives of the old A. amoena that are fine for basket work. These are all varieties of A. Indica, but the mollis and Ghent varieties are very pretty, too, with their soft pink and yellow tints and their delightful fragrance. These need other flowering or foliage plants with them usually, though with a well chosen pot cover, a well grown Azalea mollis is very pretty. Pot grown lily of the valley is a good seller and here we can never understand why the retailer with a little glass of his own does not go into its culture more. He may not have the facilities for growing valley regularly as a cut flower proposition, but why he does not purchase a few pips and grow his own pot stock is a mystery. There is nothing difficult about it and he can get from 75 cents to \$1 for a pretty little pot of valley without any trouble. Compare this with the price wholesalers get for the cut flowers and figure out the profit. We don't say there is a million in it, but on the other hand we certainly do not know of a more profitable little side line.

Rhododendrons are good sellers where the patronage of the store is of the class that is willing to pay a good price and they are most satisfactory to handle. But where \$1-\$3 is the best one can get for plants then, of course, rhododendrons are out of reach. All yellow baskets of plants have come to be very popular at Easter and here the genista shines. It is a cheap plant, hardy and stands well, showy and very satisfactory to handle. Combined with yellow daffodils or yellow hyacinths it makes a charming basket and is also useful for selling as single specimens. Spireas are typical Easter plants, the graceful foliage and flower spikes associating well with any kind of decorations or other plants. Then they are comparatively cheap and a fine plant can be retailed for \$1-\$1.50. The old white form is somewhat out of the running with the newer improved varieties, but even now it is good and large numbers are sold annually. Always tell customers to water these plants copiously for the pots are full of roots and the great heads of flowers and foliage form a great drain upon them. Marguerites are pretty and useful plants indispensable at this time. They

EASTER BASKET OF LILIES AND OTHER PLANTS BY ERNST WIENHOEBER CO., CHICAGO.

should be secured in small pots for basket work as well as larger ones for selling singly.

#### Plant Baskets.

The plant basket has long been a favorite form of Easter present and has proven a profitable line for the retailer. At Easter there are perhaps more flowering and foliage plants than at any other holiday and a retailer has only himself to blame if he does not get a good variety into his baskets and other devices. Of late years simplicity in arrangement has been the prominent note in this class of work and this can be combined with grace and effectiveness with the material at hand. Our illustrations show, far better than we can hope to, how these baskets should be arranged. Beautiful effects can be worked out in the one color styles. For instance, as a pink basket we have seen very beautiful results from using Dorothy Perkins or Lady Gay roses with *Primula obconica* or *Sinensis*, cyclamens or pink hyacinths. *Narcissus* and daffodils combined with genistas and tied with a ribbon of old gold makes a charming all yellow device and many others can be worked out in keeping with the stock at command. White and green, although very chaste and beautiful, have a cold, funeral like appearance and, unless specially desired, are not to be unduly pushed. A single Easter lily, of course, is very fine and makes a welcome present, but in the usual run of basket, patrons look for brightness and color and plenty of it; not a jumbled heterogeneous mass of all the colors of the rainbow, but prettily blended or strongly contrasted tints that are telling and effective without being garish.

## THE RETAIL TRADE

THE fine bouquet of white orchids, illustrated on page 362 is the work of Canger & Gormley of State street, Chicago, and was made for the wedding described in our issue of February 26, page 211. It was made of that beautiful white orchid, *Phalaenopsis amabilis*, but, unfortunately, the engraving does not show as clearly as we could wish the beauty of the work or the delicate loveliness of the flowers. It is a splendid orchid for the purpose and one of the most choice and chaste flowers in cultivation.

#### Store Window Wedding Decoration.

The accompanying illustration shows a wedding decoration recently displayed in the show window of Chas. Thorley's store, Fifth avenue and Forty-sixth street, New York. The idea is very original and we do not recall anything similar in window decorations. Everything is here shown that may be seen in a high class wedding decoration.

On the prie-deau is the bridal bouquet of white orchids and lily of the valley. Elsewhere there is a French garland of pink roses for the matron of honor; a bouquet of pink roses and lily of the valley for the bridesmaid; chanticleer hats of pink roses and daisies for the flower girls and corsage bouquets of orchids for the mothers of the bride and groom. There are also boutonnières of white roses for the fathers; a boutonniere of white orchids for the groom; one of lily of the valley for the best man and others of gardenias for the ushers. There are

chanticleer bunches of white roses for the coachman and horse bridges and decorated whips for the departing bridal party. The elaborate altar decorations of orchids, lilies, ferns, daisies, and other fine foliage plants can be easily recognized and appreciated. This illustration, in addition to its leading features, shows a distinct advance in photography. The photograph was taken at night, and it is so natural that they even caught the boxwood hedge, outside of the window, which is another of Thorley's original ideas.

#### St. Patrick's Day in the Morning.

H. R. Hughes, Chicago, mailed the following circular to prospective retail customers, calling attention to his St. Patrick's day window decorations, reproduced herewith from photo.

When President Taft arises to make his speech before the Irish Fellowship club on St. Patrick's day this year, his feet will rest upon a section of the "ould sod" of Ireland, brought over to this city for that purpose.

This is a little bit of sentiment that is particularly appropriate for such an occasion. Irishmen are very loyal to the soil of old Ireland, figuratively and literally, and lose no occasion to show their loyalty to the mother country. If conditions in Ireland, politically and industrially, had in the past been more favorable for the development of her citizens, America would not now be the home of so many of the best children of the Irish nation.

Only a few can attend the Irish Fellowship dinner, however, and not many can take the time to go back to Ireland to see again the scenes of their early days. For this reason I have put a bit of Old Ireland in my window this month, in the form of a view of an

A NOVEL WEDDING DECORATION IN THE WINDOW OF CHAS. THORLEY'S STORE, FIFTH AVENUE, NEW YORK.

ST. PATRICK'S DAY WINDOW, BY H. R. HUGHES, WEST VAN BUREN STREET, CHICAGO.

Irish castle. Some of my Irish friends tell me it resembles a view they have seen in the old country.

You may wonder who is the young Irishman in the scene. That is Andrew Mack, leading the famous donkey he rides when he sings those Irish songs that bring down the house.

By the way, there is an old precedent that forbids a president of the United States from leaving the country during his term of office. I am glad that President Taft has decided to make an exception to this rule in this instance, and that he will step for a few moments from American ground to the soil of the Emerald Isle.

#### Easter Basket of Lilies and Other Plants.

No flower is so popular at Easter as *Lilium longiflorum*, either as a pot plant or cut, and it is equally useful as a basket plant for associating with other species. It stands head and shoulders above everything else in its chaste beauty and charm and there is nothing in the whole range of plants that can compare with it for the special festival after which it is popularly named. A lily can never be put in the wrong place; it associates well with any and every other kind of flower and plant and does not lose any of its fine individuality or detract from the beauty of the others. It is this quality that makes the white lily so

popular for every class of decoration. We have frequently described the arrangement of these plant baskets and need say no more on this subject at present, except that the fine basket figured was the work of the Ernst Wienhoeber Floral Co., Chicago.

#### Color Harmony.

A paper read by E. A. Slattery at the March meeting of the Buffalo Florists' Club.

Ever since the Grecians in the early ages made garlands of flowers, the question of color harmony has been one that has received the attention of those interested in supplying those wants, and the difference of opinion, that existed in those days, we find, are perplexing the florists of today, and in a far greater degree, for every year since those olden times, the demand has been constantly on the increase for floral decorations, until no social, business or other function is complete without its floral accompaniment. It is for this reason, no doubt, that I have been asked this evening to give my views as to the harmony of colors in flowers, and thus pass on the craft we represent, the knowledge that I have acquired in my years of experience in this and other cities.

#### THE MEANING OF HARMONY.

Color harmony? What does it mean? It means that blending of the various shades so that the picture pre-

sented to the eye will be attractive, beautiful, and fascinating to a marked degree. When you have attained this, you have reached the goal of satisfaction to your patron, as well as to yourself. True color harmony must originate with the florist himself; others can suggest, but on his or her own artistic judgment one must rely. True it is, that, what will be pleasing to the eye of one person, will not appeal in as strong a degree to another; this is often due to a want of that feeling called by many the aesthetic sense.

#### FOLLOW NATURE.

Nature, 'tis true, is the best harmonizer, and a person following in her footsteps cannot wander far from the true pathway of color harmony. Certain individuals are blessed by either being born with, or later developing to a greater degree than others, the art of harmonizing colors; if this were not so, all of us would be expert harmonizers, and handle the various shades with the same impunity, yet with that sublimity that Nature does herself. Nature has endowed many persons with a clearer perception of the true idea in color harmony than is given to others; to such fortunate persons, be they florists or not, the problem of color harmony has been solved, for it is within their own brain that the scheme of harmony is developed, and their handiwork will pro-

claim their efficiency, and generous customers seek their work.

#### COLOR IN FUNERAL FLOWERS.

Not many years ago, when I first took up the art of the arrangement of flowers, if a customer desired a floral piece for a funeral, no one thought of making up anything except in white and green; and it was the height of impropriety to send a floral token with any color in it. Today how different. The floral emblems used at obsequies of the present day are most brilliant, and often gorgeous in their brilliancy, yet skilfully, deftly and artistically arranged. They are most pleasing to the eye, reflect the beauties of Nature, and, at the same time, are in complete harmony with the surroundings in the death chamber, be it in hovel or mansion. This, the one color scheme, has been laid away with many other obsolete ideas.

The combinations that have taken the place of the one color schemes are more cheerful than those formerly in vogue, still they retain their artistic beauty. The change has benefited both the florists and their patrons. The former benefits by furnishing an outlet for the flowers of various colors, allowing a greater leeway in their selection and thus always being able to fill a "long felt want" by the substitution of one flower for another, even if a little different in shading. In the one color scheme of harmony, this could not be done. It benefits the customers by giving a more cheerful aspect to their tokens, and the radiation of a cheerfulness among those who are the recipients of their gifts of flowers, be it the debutante, or the bereaved family of some departed soul.

#### GREATER VARIETY.

The range of vision and purchase of the patron and that of the florist have been widened, until the flowers that are in commercial use today are almost as numerous as the sands on the sea shore. This is a most satisfactory situation or condition, for it permits of color combinations that could never before be executed and brought to that perfection which is excelled only by Nature herself.

The true idea of artistic and harmonious color blending must, and always does, originate in the inner man or woman, the handiwork is but the visible evidence of the color working of the mind. If it is not in the mind it cannot be successfully transmitted to the floral pieces or scheme itself. You cannot get blood out of a beet, neither can you get artistic and harmonious combinations of colors from those persons who have no conception of harmony and beauty themselves. In submitting a few combinations of colors, that in my experience have found favor with the people in general, I do so fully realizing that they may, or may not, meet with your approval, for, as I said in the commencement, there were differences of opinion along this score, in the ages past, and they are still with us in the twentieth century; but the combinations that I will submit, are those that have received the seal of public approval, and in this commercial age, that is what counts.

#### TWO COLOR COMBINATIONS.

Some years ago, I had the pleasure of first introducing a two color combination. For some length of time the idea met with ridicule from members of our craft, also from our best patrons, and not one was willing to give me the opportunity to demonstrate the beauty and artisticness of the idea by actual decoration. I abided my time, and finally persuaded one of our best customers to grant my request, for I had embraced every opportunity to impress upon him the desirability, the effectiveness, that I felt sure would result from the combination I had in mind.

I decorated the dinner table according to my two color scheme, and it was the "hit of my life." The colors

Standard Crimson Rambler Rose.

By Harry Rowe, Chicago.—Accessories, Red Ribbon, Boxwood Sprays and Asparagus Plumosus.

in this particular combination were pink Killarney roses and yellow daisies. Today every florist in Buffalo, and in fact all over the world, is using the same combination, evidence sufficient that the combination was a most happy thought, thoroughly artistic, attractive to the eye, and pleasing to the aesthetic taste. This combination, making the hit that it did, caused me to give serious thought to other color schemes, and I evolved the following combinations: Richmond roses and deep yellow roses, the Richmonds predominating. This combination is used most extensively today, and is a close second in popularity with the first mentioned.

In speaking of yellow, I might say that a combination of yellow pompons and Bon Silene roses makes a most striking combination, and one that is

very effective from every point of view. Yellow oncidiums and violets form a combination most satisfactory, and one that will command the attention of your patrons at once. The combining of Safrano roses and violets is very pleasing, attractive and a combination that is difficult to beat, while many find the combining of Perle roses and violets form what has been termed by many florists as the "combination irresistible."

#### VIOLETS.

Violets are the standby of the florists for the reason that there are so many other fine flowers that will go well with them. In fact, there is not a flower of any color that will not go well with violets in a two color combination, with the possible exception of scarlet. To this fact is due much of the popularity of the violets. Whenever a customer is in doubt as to the color of the flowers he is to purchase for his lady to wear, on account of his not knowing the color of the bodice she is to wear, he can never go amiss by suggesting violets, for they are a never failing match for any shade or color.

I could suggest to you combinations from now until morning, but the few that I have mentioned will suffice to indicate that the day of one color scheme and combination has passed forever from the florists' horizon, and that upon us devolves the duty of making combinations that will be pleasing and find favor with our customers. No one has a monopoly of the combination business; put your ideas into effect; make up a combination that appeals to your idea of color attractiveness and effectiveness. It is by so doing that you give to the craft the benefit of your ideas, and thus the floral art keeps pace with the progress of the hour.

Many are bewildered by the complicated color schemes, for color harmony, as we know it today, has made enormous and wonderful strides, both artistically and numerically, from the color harmony of 20, or even five, years ago, and there is no telling where further study and development of it will lead the coming generation of the florist craft.

#### Asters to Follow Corn.

ED. AMERICAN FLORIST:—

I would like your advice, as I have a lot 70x100 feet which was planted to corn last year, but I want to plant it to asters this year. Would it be advisable to plow it in spring and put in some cow manure? Please state how much seed it would take for branching asters.

R.  
Yes, plow as early as possible in the spring to allow plenty of time for the manure to decompose, and turn the ground just as often as possible by cultivating, until time of planting. If after planting the piece is to be hand cultivated make the rows two feet; if cultivated with horse, two and one-half feet. One ounce of aster seed contains about 10-12,000 seeds. After making liberal allowances for injury and destruction of young plants in planting, etc., one ought to grow 5,000 mature plants. On a large scale we allow four ounces of seed to the acre, or about 3,000 plants to the ounce of seed.

C.

### Preparations for Decoration Day.

The demand of the high class trade for Decoration day is for well-grown stock in good bloom for immediate effect. Geranium plants must be well established, with heavy trusses of bloom, to command the best prices. It is waste of time to try and talk a would be customer into buying small scrubby plants with the explanation that they will give better results after planting than a larger one in full flower will do. This applies not only to the geranium, but to every other plant as well. Flowering plants, such as hydrangeas, marguerites, Canterbury bells, roses, etc., should be fresh, well-bloomed plants, that have not been subjected to heavy forcing and the bedding plants well established, thrifty, cool grown stock and not drawn and spindly. The hydrangea plants for Decoration day should be now well established, making their new growths with the blooms just visible down in the new shoots. From this time on give them ample watering, never allowing them to wilt down for the want of it. Also apply liquid manure about every 10 days, with an occasional light dressing of sheep manure. Particular attention must be paid to the drainage of the pots. See this is kept clear as any clogging up will cause the foliage to turn pale and yellow. Give plenty of air on every favorable occasion and maintain a night temperature of 50°-52°. Avoid any close high temperature or a soft growth will result and the plants suffer when taken from the greenhouse for sale. Any crowding of the shoots can be taken care of by thinning out the least prominent ones for propagating.

Plants of *Hydrangea arborescens grandiflora* that were potted last fall and have been held dormant should be started up now. Thin out any small wood and prune back the growths to four or five good prominent eyes. Give the plants a good watering and start them in a temperature of 50°. Rambler roses should be started into growth now. Those that were pot grown last summer and have been covered up outside all winter should have the drainage examined so that the water passes away freely. Then remove a little of the top soil and fill in with a mulch of live soil consisting of one-third well rotted manure and two-thirds fresh soil, firming this well. Cut out all decayed leaves and dead wood, stake up and tie in the shoots as required. Water them carefully until root action commences after which they should receive a good soaking. Syringe the wood two or three times a day on bright days to make the eyes break liberally. They should be started cool. Give a temperature at night of 50°-52°, gradually raising it as the foliage appears. Ramblers are very subject to mildew if grown too warm and close, so be careful not to overdo it in this respect and, to guard against mildew, keep sulphur continually on one of the steam pipes. The Souper and other roses for bedding should also be started into growth at this time, potting them into larger pots as they require it.

Pelargoniums, fuchsias, heliotropes and marguerites can now be shifted

into their flowering pots, using a moderately light soil not too heavily charged with manure. These plants require a live soil rich enough to make growth active but too much manure will cause a soft growth at the expense of bloom. Start up the cannas now; we divide the roots into two and three prominent eyes, cleaning off all

bedding plant trade is so important now that it is necessary to pay particular attention to see that the stock is in fit shape to meet it. Geraniums should be well hardened, sturdy stock in good bloom. Those required for May sales and Decoration day planting should be in shape to be potted from 3 to 4-inch pots by March 15. This

CANE HANDLED BIRCH BARK BASKET.

By Andrew McAdams, Chicago.—White Hyacinths, Asparagus Plumosus and Ferns.

decayed matter, then place close together in the sand of a warm propagating bed. They soon start into growth and, as quickly as they have made good roots they are potted into 3½ and 4-inch pots according to the size of the root, using a fresh soil but being careful not to water too freely until the plants get well rooted. Cannas start up better in a warmer temperature than that given bedding stock in general and after becoming established should be treated to plenty of fresh air to harden them.

Geraniums are the most important of all plants for Decoration day and bedding out. These require close attention from this time on until the bedding plant trade is finished. The

will give them ample time to make good stock. The final potting should therefore be attended to without delay. After potting they can be set pot thick until growth commences again but before they have a chance to become drawn by being overcrowded they should be spaced out. It takes room to grow a good geranium as well as any other plant. Geraniums thrive best in a cool airy temperature with the roots kept a little on the dry side. While thinking of geraniums the question comes up as to what are the colors to grow. Without a doubt the best demand is for the semi-double varieties and the dark and bright scarlets are the best sellers. Those of the *Beaute Poitevine* or salmon shade have a good call; also

the soft pink of Jean Viaud, but customers who try these one year seem to tire of them and come back to those of the S. A. Nutt color. The white varieties have only a limited demand, so the stocks of these should be governed accordingly. The single varieties are very beautiful while in the greenhouse but they are not entirely satisfactory in this climate for bedding.

Coleuses are plants that to have them in good shape, need to be kept moving all the time. Light soil, plenty of shifts and a warm temperature suits them to perfection. Plants now in 2 or 2½-inch pots can be shifted into 3-inch and in a short while the tops can be taken for more cuttings without spoiling the original plant. Cuttings can also be put in right along. It takes but a short while for them to root if given a bottom heat of 65° potted up as soon as rooted and reported as quickly as they require it.

Mme. Sallerol geraniums are largely used for cemetery purposes. Stock of these propagated in January and now in 2½-inch pots will be ready for a shift into 3-inch pots the end of March, after which, if overcrowded for room, they can go outside into cool frames. Plants held over from last fall can be shaken out from the soil, cleaned up and repotted into fresh soil.

Fall transplanted pansies held in frames all winter, should now be given ventilation at every favorable opportunity and where they have been worked out of the ground by the frosts go over and add a little fresh soil to straighten them out again. Winter sown stock now transplanted in flats should be kept as near the light as possible in a cool, airy place. After April 1, as soon as the cold frames can be got in order these can be planted into them and if it is the intention to carry them in the flats for blooming they should be given space at this time for their proper development. Alternantheras are also largely used for cemetery purposes. Stocks of these propagated last August or September and held over winter close in beds or flats will need potting into 2 or 2½-inch pots the latter part of this month and plunged into hotbeds. Alternantheras should be given about six weeks time in the hotbed and allowed a week or 10 days to harden off before planting out. They require a light, sandy soil that has been prepared by being laid up with layers of well rotted manure. Care should be exercised not to give an overabundance of water until the plants are well established and in active growth. Echeverias, the companions of the alternantheras for design beds, should, if these have been held close in flats through the winter, be given room to expand by re-boxing. They do best in light, sandy soil and should be set near the light in a cool, airy house. Petunias, salvias, Vernon begonias and all other plants for bedding being increased from cuttings should be followed close up. It will take every day from now on to make salable plants. Verbenas, lobelias, petunias, asters, stocks and all other varieties of bedding plants being raised from seed, must now be well on the way and the transplanting

of them attended to as quickly as they arrive at the proper condition. For the best class of trade many of these plants are required pot grown and well in bloom. For this purpose transplant from the seed box into flats as soon as large enough; pot in 2¼ or 2½-inch pots, using a medium light soil.

C. W. JOHNSON.

### The French Bulb Industry.

#### RESUME OF THE SEASON OF 1909.

American florists make large purchases of bulbs from southern France, the declared exports through the consular agency at Toulon alone for the United States in 1908 amounting to \$126,778. The following account of this industry by Consular Agent Francis Milton Mansfield will therefore be of especial interest:

The popularity of flowering bulbs (oignons a fleurs) may be said to have originated in France half a century or more ago through the enthusiasm for their culture given by Alexandre Dumas, père, and Alphonse Karr, and to the latter was due the development of the flower industry of southern France so far as its reaching out into foreign markets was concerned. From Ollioules (an overgrown village lying inland half a dozen kilometers from the sea near the western limits of the Department of the Var in southern France) to Cannes, Nice, Antibes, and Menton (at the Italian frontier) extends this great flower garden, though chiefly it is in the neighborhood of Toulon, from Ollioules to Le Pradet, La Garde, and Hyeres, that the flowering bulb industry reaches its greatest height.

The United States is probably the largest buyer of French bulbs in

these markets, and certain species, supposedly grown in Holland, have their origin here. The soil is seemingly better suited than any other to the forcing of the finer varieties of narcissi, hyacinths and freesias, notwithstanding the progress which is being made elsewhere, notably in the Puget Sound region. Climatic conditions are exceedingly favorable here, the region being the most southerly in all France, and remarkably well sheltered from the violent north wind, the mistral, which so frequently tends to make the temperature uneven elsewhere in the same latitude in France. Here the exposure is full south and the forcing grounds, often terraced hillsides, are well drained and above all well sheltered, thus making possible also the development of the enormous cut flower traffic of the winter months, when narcissi, hyacinths, violets and carnations reach the Paris, London and Berlin markets by special trains.

#### CULTURAL METHODS AND DIFFICULTIES.

The Roman hyacinth bulbs are put into the ground at Ollioules in October, and are planted in rows 20 inches apart and running from east to west. The first flowering sprouts appear in December and January, after which another blossom appears, less splendid than the first, but still of a luxuriance unexcelled elsewhere. The crop of next season's bulbs comes later, and are known as the "bulbilles de multiplications," the first of which find their way into the shipments abroad about the last of June or the first of July. In general the bulbs shipped from Ollioules are large, heavy, and compact, but the maladies which are known to attack the hya-

EASTER BASKET BY W. J. SMYTH, CHICAGO.

Easter Lily, Foliage Begonias and Primula Obconica With Gauze Ribbon Bows.

PCTS OF DOUBLE YELLOW TULIPS COURONNE D' OR.

cinth bulb, a sort of rot at the base and an insidious little worm which enters by an almost invisible hole, sometimes work a havoc with the crops which reduces the season's supply at Ollioules very considerably.

It is to be noted, to the credit of the shippers, that special care is taken that only healthy bulbs are sent out, so far as can be controlled. There has been from the causes mentioned a notable shortage of certain of the larger sizes of bulbs at Ollioules in recent seasons, notably that of the present, 1909. The present United States tariff rate is \$2.50 per 1,000 on hyacinth bulbs instead of the former ad valorem duty of 25 per cent, but this need not affect the general average of prices, save that it adds to the cost of the smaller sizes and reduces that of the larger dimensions. Any notable shortage of the larger sizes (those above or approximating six inches in circumference) the coming season is what will govern the ruling market price.

#### PROSPECTS OF FUTURE SUPPLY.

Expressly affecting the 1910 crop and its prospective prices is the disaster which occurred at Ollioules on October 31, 1909, when a cyclonic tempest of hail and rain laid low all the budding carnations and in many instances washed out many thousands of already planted and sprouting bulbs. The damage was assessed at

\$400,000, probably an exaggeration of 50 per cent, but the greater part fell upon the growing plants above ground, principally carnations.

The incident may, however, be considered as one which will affect the quantity of bulbs available for trading in 1910 as well as their prices, and even United States buyers, who have the reputation of taking the finest stock (and incidentally paying the highest prices), may find difficulty in supplying their wants unless early orders are placed. Regardless of the extent of the crop elsewhere, either home or foreign grown, that of Ollioules and Hyeres is bound to have an effect upon the market if conditions of supply and demand in 1910 are at all like what they have been. The quality of the 1910 crop in this district is likely to be good, for the season has not been unusually rainy and there is little likelihood of further humidity seriously affecting the crop.

The first shipments of bulbs from Ollioules in 1909 should have arrived at New York about August 1, and amounted to about 2,500 cases. There is no assurance that the 1910 crop will be earlier or later, good or bad, larger or less in quantity, save as it may have been affected by the rain and hail storm of October last. There are no estimates to be had from the growers on the spot or at Hyeres or Le Pradet which will enable one to

say that a less or a larger area has been planted (about 6,000 acres in the department are given over to floral culture, but this includes the area devoted to growing flowers as well as bulbs) for the coming season than formerly, but the fact that there was a demand in 1909 in excess of the supply (the United States not being able to get all that was desired), especially in the larger dimensions, points to the fact that strenuous efforts are being made by the growers to meet the conditions of the prospective market.

The shipper, who is often a grower, will seek to augment his stock from outside neighboring sources and from the small growers who have not the facilities for marketing for export: this is evident from a knowledge of conditions, but so far as the districts neighboring upon Toulon are concerned they will demand that the stock be sound, healthy, and of good bulk. The small peasant grower may not always know how to distinguish the hyacinth malady, which often is scarcely visible from without, but the present shipper of "calibrage" (the measuring up of the circumferential dimension) has every means of verifying the soundness of the stock, and as a rule exercises it.

The sum total of opinions gathered from various direct sources is that French bulbs in 1910 will be higher in price, and this according to the

scarcity of large sizes. This applies to bulbs of all kinds, but particularly to the chief article of competition, the white Roman hyacinth approaching the dimension of six inches. The shortage, if any, in 1910 is only foreseen with respect to the larger sizes, and this of course is based upon the current demand for those bulbs which will give the most luxuriant blooms, rather than any unsurmountable difficulties in growing bulbs of large dimensions. The price is freely offered by United States buyers at any rate for this class of product, and if it is lacking in quantity it is along the lines of increasing the supply that energies will be spent in the near future.

The experiments being made by the United States bureau of plant industry may be expected ultimately to be felt with respect to the importation of foreign bulbs into the United States, but there is no grower in these parts with whom I have talked who admits its possibility, giving as a reason that his product is the best of all its kind and that nowhere else on earth are conditions for their growth so favorable as here. This may be a worthy assumption of local pride, but climatic conditions in this southernmost part of France are certainly unusually favorable. Nature has a great deal to do with the excellence of the bulb crop of Ollioules and Hyeres, for with the small growers at any rate very little scientific breeding or propagating is carried on; the larger growers, with capital and patience for experiment, are producing perhaps finer results, but nature taking its own course produces the bulk of the crop which is shipped from the region.

The fact that the hyacinth was originally of Asia Minor and Persia, where climatic conditions and those of the soil are perhaps not far different from what they are here, is a sufficient reason why the bulbs take root and propagate so luxuriantly and extensively on this Mediterranean coast. The hyacinth thrives best in a dry, temperate climate.

#### SHIPMENTS AND MARKET PRICES.

As to the scarcity and the "clean up" of the 1909 crop, application to three of the largest shippers of Ollioules in the month of November failed to produce a dozen bulbs of all kinds, though I wished to make up a parcel of 100 or more to send as a gift. Ollioules was literally sold out, and the rest were planted for the 1910 trade. The same was true of another smaller grower at La Garde, and there is no reason to suppose that the case was different with the flowers of Hyeres.

The number of individual shipments of flowering bulbs from these parts, as per the consular invoices certified at this consular agency, exceeded in number those of 1908 by 16 per cent, but in money value the totals were 6½ per cent less than in 1908, it being borne in mind that with regard to hyacinths as well as narcissi it was the larger and more costly bulbs which were found wanting, thus tending to reduce the volume.

In the Department of the Var about 6,150 acres are given over to "cultures

florales," but this term may be said to cover all plant and flower growths (the principal of which is that which supplies the cut-flower market) and those grown for perfume extracts, as well as some considerable extent of territory devoted to the culture of immortelles, the "everlastings" of commerce.

The increased number of bulb shipments to the United States in 1909 was undoubtedly brought about by a shortage when orders in hand actually came to be filled, followed by a number of smaller subsequent shipments, and it is in averaging these shipments as to value that the number is relatively large and the volume somewhat short of the figures of 1908.

Prices the present season for shipments to the United States have run as given below, the figures given being the average prices. What concessions were made in the way of discounts for cash payments, or what augmentations there may have been in the nature of charges for cases and packing, can hardly be said to affect the value of the product as it reaches the consumer who buys at retail in dozens, scores, or even hundreds. The following are prices per 1,000:

Narcissus grandiflora, five inches, \$3.92; extra, \$5.21; Trumpet Major, \$5.26; Grand Monarque, \$5.40. Prices of Trumpet Major may appear relatively high, but some were included under this designation which brought as much as \$6.75, though generally prices ranged from \$4.63 to \$5.80. Freesias, Mammoths, \$4.83; refracta alba, \$3.47. White Roman hyacinths, 4 1-3 to 4 3-4 inches, \$9.65; 4 3-4 to 5 inches, \$12.55; 5 to 6 inches, \$13.10 to \$13.50. Liliun candidum, 7 7-8 inches, \$13.90; 9½ inches, \$15.45.

RUSHVILLE, IND.—F. Windeler has built a greenhouse and is going into the culture of plants and cut flowers.

## FLORISTS' PALMS.

### The Growing Season.

March may be said to mark the opening of another season among florists' palms, from the fact that at about this time these plants begin to be more active in growth and, where space and the condition of the stock will allow it, repotting may begin. Seeds of some species are also received quite early in the season and provision must be made for sowing these immediately on their arrival for, though the majority of palms have hard and nut-like seeds, yet they do not retain their vitality for so long a period as some smaller and apparently more perishable seeds. The exception to this rule is found in the seeds of the double cocoanut, *Lodoicea Seychellarum*. They have germinated after having been in the ground for eight years, but this exception is not specially interesting to florists, as the species in question is not counted among trade palms.

On the contrary, many growers have found to their sorrow, that unless the seeds of kentias, arecas, cocos and latanias were fresh and carefully packed, so that they retained their moisture without heating in the box, the percentage of germination would be low, even with these readily germinated species. The best result that the writer has secured from kentia seeds was from a shipment received some years ago, in which the seeds were so fresh that the outer hulls were still green, the percentage of germination in that instance having been a little more than 72. Another example in the same line of argument was in the case of several thousands of domestic grown seeds of *Lantania Borbonica*, these seeds being sown within three days of the time they were picked from the tree, with the

A YELLOW EASTER BASKET BY W. J. SMYTH, CHICAGO.  
Genista, Begonia, Japanese Duckling and Yellow Ribbon.

DOUBLE DAFFODILS.  
Grown by Andrew McAdams, Chicago.

result that 98 per cent of them germinated. A similarly high percentage of germination has also been had from seeds of *Areca lutescens* from Brazil on rare occasions, there having elapsed about two months between the time these seeds were gathered and the date of their planting. In each case these seeds were sown in pots or pans, and the latter plunged in cocoa fibre in a warm greenhouse, and given careful attention in regard to watering.

But these were exceptional cases and, on the other hand, there have been shipments of areca seeds that did not average 10 per cent germination, and only last season there were large shipments of these seeds in the hands of at least two experienced growers that proved to be absolute failures. *Cocos Weddeliana*, still one of the most satisfactory plants to use for the center of a table fernery, is also rather uncertain in germination, some shipments proving very good while others give a very poor return. A better average of germination has been secured from this species by those growers who plant the seeds singly in small pots, this practice doing away with some of the trouble from broken tap-roots that one can scarcely avoid when potting off seed-

ling cocos. A broken tap root is the most frequent cause of disease and death among the young plants of this palm. When cocos seeds are sown in large pots or pans the tap roots of the seedlings almost invariably go straight down to the bottom of the pot and, as these are very brittle, many of them are broken in the operation of potting. Some of this difficulty may be avoided by allowing the seed pots to get rather dry before potting the seedlings, for in this condition the roots are tougher and more pliable than they are when water soaked, but at best it is a troublesome job, and even an experienced potter will break quite a number, and at best not pot many thousands in a day.

The Fish-tail palm, *Caryota urens*, is a very attractive palm to most plant lovers, though seldom seen in quantity in trade collections, and also has the advantage of germinating freely and quickly from fresh seeds. The foliage of *caryota* is somewhat sparse when the plants are grown singly, but made up in clusters of three or four plants in a 7-8-inch pot, this palm is quite effective, and in moderate supply would doubtless find buyers, for not every one wishes to be confined to the same three or four species of palms that are most common. Any-

one having young plants of *Seaforthia elegans*, or *Ptychosperma Alexandrae* that are just showing character leaves may make them up in groups of three or four plants in a pot to advantage, these bushy little specimens finding more admirers than single plants of the same species. But in potting up these combination plants much may be done toward improving the shape of the specimen by using a little judgment in the selection of the plants that are to go together, and then placing them in the pot so that the foliage is arranged in a natural and symmetrical manner and by carefully reducing the soil from the old ball the stems of the plants may be brought close enough together to give the appearance of a branched plant rather than a combination. In brief, give them a natural effect rather than an artificial one. Of course the matter of shading the palms from the full sunshine will have been thought of before these notes will appear, for the majority of these plants require some protection at least on the south side of the greenhouse by March 1, and on the north side about the middle of the month. It is little use trying to convince a customer that the less shaded plants are more hardy, for the deep green foliage of the shaded stock

usually appeals more to his sense of beauty.

W. H. TAPLIN.

#### Love and Flowers.

My daughter, wouldst thou know a man's secret? Go to the florist, then, O simple one, for in him every man repositeth his confidence. Yea, by the flowers which he sendeth a woman shall ye judge the quality of a man's love, likewise the quantity and exact stage. As violets pass unto roses and roses unto cheap carnations, and carnations unto naught, so passeth his grand passion from the first throes into matrimony.

Lo, at the beginning of a love affair mark with what care a man selecteth his flowers in person, that not a wilted violet shall offend thine eyes! Yet, as time passeth he telephoneth his orders and leaveth it all to the clerk. And there cometh a day when he murmureth wearily, "I say, old chap, make that a standing order, will you?"

Then the florist heaveth a sigh, for he knoweth that the end is at hand. Yea, this is the mark of an engaged man who doeth his duty. So after the wedding bouquets all orders shall cease together, and until he seeketh flowers for his wife's grave that man shall not again enter a florist's shop. For stale carnations, bought upon the street corner and carried home in a paper bag, are a fit offering for any wife. Yet a funeral rejoiceth the florist's heart and maketh him to smile, for he knoweth that a widower's next order shall be worthy of a new cause and the game shall begin all over again.

Verily, verily, my daughter, I charge thee, account no man in love until he hath gone forth into the gardens and the fields and plucked thee a few dinky pansies or stray weeds with his own hands. For when a man sendeth thee violets it may mean only sentiment, and when he sendeth thee orchids it may be only a bluff, but when he doeth real work for any woman it meaneth business. Selah!—London Tit-Bits.

PROPHETSTOWN, ILL.—George Hilger's boiler at the greenhouses burst recently and he has been put to great inconvenience to keep the temperature sufficiently high to prevent freezing the stock.

UTICA, N. Y.—At a recent meeting of the Florists' Club it was decided to hold a banquet April 10. A committee was appointed to make arrangements for the occasion. The club adopted resolutions heartily endorsing the proposition to erect a convention hall in this city, declaring it to be a necessity and the movement for it an opportunity that should not be neglected.

NEW BRUNSWICK, N. J.—Pupils in the Washington school, have turned their attention to the culture of flowers in school as an incident to their studies. In November last the pupils "chipped in" and bought some bulbs which they planted in pots and placed them in the windows of the school. They not only have a pretty floral display now, but have learned something about raising flowers.

EULALIA JAPONICA.

At Highland Park, Rochester, N. Y.

## HARDY HERBACEOUS PERENNIALS.

### Notes on Culture.

Seeds of hardy perennials, such as delphiniums, aquilegias, gaillardias, campanulas, hardy primroses, and all perennials that germinate in a few weeks, should be sown immediately. We prefer to sow all such seeds in flats and they germinate more freely and rapidly in a well made hotbed than they do on the greenhouse benches, although, of course, it is not advisable to construct hotbeds in our region before the middle of March, and previous to that, of course, seeds are sown in the greenhouses, if we want them earlier. Care should be taken to have the soil on the surface of the boxes free and loose, and it should be prepared with a mixture of light loam, leaf-soil and sand, so as not to cake. When the seedlings are large enough to handle they should be transplanted to other flats about one inch apart. When the plants fill the flats and are hardened off by exposure, by June 1 they should be planted in beds with a good, sunny exposure in rich, mellow soil in rows about one foot apart and about six inches between

the plants. By October 1 the plants may be planted in their permanent quarters, or they may remain until April of the following year, with a little protection by means of evergreen branches or light straw placed over the beds during the winter. Of course, seeds of perennials may be sown in drills in a bed in the open ground as soon as the soil is mellow and fit to handle in spring, and following the general treatment as indicated above.

The great majority of perennials need frequent transplanting when they are growing in permanent quarters. Perhaps peonies are the most enduring of all perennials, and they will remain for a great many years without showing any signs of deterioration. The best time to transplant peonies is certainly the fall, but if for various reasons transplanting or rearranging and breaking up of the clumps has to be done this coming spring, it should be done as soon as the season opens, as they start early into growth, and they are seriously weakened if handled when they are in active

PHLOX RICHARD WALLACE.

Growing at Highland Park, Rochester, N. Y.

growth. Perennial phloxes generally deteriorate after three years, when it is necessary to lift the clumps and break them up into a number of divisions and replant in well enriched soil. German irises, pyrethrums, delphiniums, perennial asters and helianthus, boltonias, funkias, hemerocallis, Japanese, polyanthus, and common primroses should all be lifted, divided and replanted wherever they have been showing signs of retrogression. The best time to lift, divide, and replant primroses, however, is when they are through blooming and have partially gone to rest, which, with most of the primroses hardy with us, is midsummer or late summer.

Early spring is a good time to break up and multiply the ornamental grasses, such as the eulalias, erianthus, arundo and pampas grass. All these grasses should be planted in conditions where there is an abundance of moisture and where there is no tendency for the soil at their roots to be dry even in mid-summer. These different grasses frequently present a stunted appearance in many ornamental grounds from being planted in too dry soil. We cover the pampas grass with a deep mulching of leaves to exclude all frost, and it does nicely with us.

JOHN DUNBAR.

#### Tells Jawsmiths to Quit.

Milwaukee, Wis.—“We have created too many non-producers, that is the principal thing that is the matter with the country,” said F. D. Underwood of New York, president of the Erie, in talking about the present cry of high prices. “If all the jawsmiths and sensational papers would shut up for a while we would soon be on a normal basis.

“The unspecialized men are having a hard time just now. I can remember the time right here when people used to take their hay, their wood and eggs into Milwaukee and then could not get anything for their products. These products would hang around till nightfall, then be taken back home or put it in some friend's barn. When the tax time came around, it was all the farmer and his sons could do to raise the money to pay taxes.

“Then there were too many people raising them and too many eating them. It is simply the swing of the pendulum. As a matter of fact we Americans are bad losers.”—New York Commercial.

SAN FRANCISCO, CALIF.—Andrew McAdams and wife, of Chicago, left for Portland, March 10, expecting to reach home in time for the Easter rush.

## THE ROSE.

### Care of the Young Stock.

From now on the young stock should have every attention, the sunniest and choicest location in order to grow the little fellows on into sturdy plants ready for benching later on. And right here let me repeat that at no stage of their growth must they be neglected. Don't let them become crowded. As soon as the foliage covers the pots to the extent of having to guess whether they require watering or not, they will either require more room or a shift into larger pots, in all probability the latter. Young rose plants should never be allowed to make but one growth in a certain sized pot, or, for instance, when, after potting them from the cutting bench and after they have made a growth in the small pots and this growth has become ripened they are then ready for the next shift to a size larger pot, before they start a new growth.

Where the stock is being grown for sale a 3-inch pot makes a good shift from a 2½-inch pot, especially from own root plants. As a rule, grafted stock is delivered knocked out of the 2½-inch pots in which the manetti stocks were first potted. This lessens transportation charges and one should endeavor to sell most of the grafted stock early in order to handle them in this manner. Just a word to the shipper in reference to one little detail sometimes neglected: When getting out an order of grafted roses see to it that every plant is firmly tied about the splice and that they are carefully mossed around the splice before wrapping them. Again it is essential that they should be packed firmly in the crates or cases; and securely nailed for even out of small pots, they make very heavy handling. They should be well watered in the pots before knocking them out for shipment. There is a great deal of satisfaction derived from the fact that you have packed and filled your orders without slighting your customers as regards the quality of the stock and the manner in which it was packed.

The writer remembers quite distinctly a letter his employer showed him coming from a customer who had received 1000 grafted plants by express and about the first he had ever packed. It read: “Received the plants promptly. It's the finest stock I have ever received and excellently packed.” My employer was pleased, the customer was more than pleased, and it goes without saying that the packer was the most tickled of the three. But to come back to “terra cotta” (as the old ducky said, when he fell out of the balloon). The best shift for grafted stock from the 2½-inch pots should be 3½, and the 3½-inch pots will require some drainage—the drainage made by using broken crocks from the small-sized broken pots is preferable to the thick pieces from large pots. Two pieces laid over the drain hole of the pot so as to form a bridge is the best method to employ as one is sure that the pots are perfectly drained. Of course it takes longer than to throw a handful

of fine pieces of crock in the bottom of a pot, but it pays. Pot firmly and do not forget to allow plenty of room for watering especially the grafted stock. Do not let the American Beauty plants suffer for want of room at any time unless black spot is an object to you.

Now that Easter is close at hand and a rush is in order, let me repeat

simply examples of the superior class of stock that Harry Papworth grows under the conditions referred to and as such they speak for themselves. They prove plainly that, given good culture, American Beauty and other roses can be as well grown in the south as in any other part of the country and are a great credit to all concerned.

when the roots are about one inch long. If allowed to make any further growth in the sand, it will be weak, as the substance is not there to nourish the plant; 2½-inch pots are generally used for the first potting, using new soil, sifted through a coarse screen. A little leaf mould added will help keep the soil porous, and benefit the young roots. The young plants should be placed in a rose house temperature, watering strictly attended to, and syringing every bright day to keep red spider in check.

When the 2½-inch pots are nicely filled with roots, shift into 3-inch adding a small portion of well rotted cow manure, and a light sprinkling of a good fertilizer to the soil, the plants to receive the same treatment as before, keeping the buds nipped off, which will cause the eyes below to break, making a good, stocky plant. Give the pots plenty of room on the bench, allowing the air and sunlight to get in through the plants. If the plants are kept in a good healthy condition they will require another shift into 4-inch pots before planting in the bench, which time will be about the latter part of May. The house will have to undergo its usual cleaning, whitewashing the benches, etc. The compost should be of good fibrous loam, two-thirds soil, and one-third well rotted cow manure, giving a top-dressing of bone-meal after the soil is on the bench, and mixing in well.

For the first week or 10 days after planting, water only around the base of the plants. When the roots begin to find their way through the new soil they will need more moisture. The plants will need immediate staking and tying to make well-shaped specimens, and to hold them in position so they can be syringed properly. Any cool night should be taken advantage of to fumigate. When the plants have been benched about six weeks or two months they will require an additional inch or two of soil and manure, equally mixed, as the young roots

IVORY AND BRIDESMAID ROSES AT THE METAIRIE RIDGE NURSERY CO.

Elise Papworth in Walk.

that at no stage of the game must the young rose stock be neglected if the plants are expected to give us the best possible returns. I firmly believe that if the young plants are in good condition when benched, there is little trouble experienced in making them productive throughout the season. On the other hand there is not a grower to be found perhaps that is not disheartened at the start if the stock is poor when benched. E.

#### Roses in the South.

It has often been said that roses cannot be grown as well in the south as in the northern and middle west sections of the country, but the illustration given herewith of roses grown by Harry Papworth, the well known New Orleans grower, who controls the destinies of the Metairie Ridge Nursery Co., go far to disprove that contention. Solid beds are used throughout as it is found that the plants do better this way than on the usual wood benches.

This suitability of solid beds for roses in the warm southern climate of New Orleans is quite in line with what northern growers are doing for summer roses. Acres of Kaiserin, American Beauty and others are grown this way in the middle west, and even in Canada the solid bed is becoming increasingly popular. It holds more soil, keeps the roots cooler in summer, and is in every way more satisfactory in hot weather than the high and dry wooden bench. But no argument either for or against can be as convincing as the flowers shown herewith which are not specially selected or cut for exhibition but are

#### How to Grow Roses.

A paper read at the February meeting of the Tarrytown (N. Y.) Horticultural Society by Andrew McKendry.

We propagate about the first week in January, in good, clean, sharp sand, using two-eyed cuttings, they making plants quicker than those with only one eye. If the sand is kept at a uniform temperature of 65° and the overhead temperature at 52°, the cuttings will root in about four to five weeks. They are ready to pot

ROSES AT THE METAIRIE RIDGE NURSERY CO., NEW ORLEANS, LA.

VASES OF IVORY AND BRIDESMAID ROSES GROWN BY METAIRIE RIDGE NURSERY CO., NEW ORLEANS, LA.

will begin to appear on the surface looking for more nourishment.

During the short days of November and December roses do not seem to relish too much feeding, for the plants are inclined to be somewhat dormant, and the roots not very active. A light sprinkling of fertilizer once a week is beneficial. As the days begin to lengthen and the sun gets stronger, the benches begin to dry out oftener, and at the same time the plants will make a vigorous growth, which is a sure sign that the soil is filling with roots, and will need more nourishment. A good watering with liquid manure once a week is as good as anything, using other fertilizers in between. A top dressing of bone meal will also be beneficial.

As a preventive for mildew, we keep the heating pipes well painted with sulphur, frequently closing off all the pipes but one run, which is well painted with sulphur, allowing the same to get extra hot, and the fumes of the sulphur will cause a regular vapor in the house. When plants are large enough for 4-inch pots, it is advisable to grow them a little on the dry side, giving them all the air possible, without injuring them, to encourage a strong, hardy growth, which will help in keeping out mildew during the hot summer weather before the fall firing begins. Ventilating is a very important factor in rose growing, not allowing the temperature to run up to 80° or 85° in the morning before giving air, and then opening the ventilators a foot or more, causing a sudden drop of 10-15 degrees, but ventilating gradually an inch or two at a time, the same method to be followed when closing the houses for the night, as the rose seems to enjoy an even temperature. •

## THE AMERICAN ROSE SOCIETY

### Eleventh Annual Convention at New York.

The eleventh annual exhibition and convention of the American Rose Society was held in connection with the spring show of the Horticultural Society of New York, in the American Museum of Natural History, New York, March 16-18. The exhibition opened on Wednesday under very favorable conditions, and although much of the stock was local grown and the west was not largely represented, the flowers shown were remarkably fine. President Poehlmann represented the west, while F. R. Pierson and the Waban Rose Conservatories worthily upheld New England. Among the principal features were the excellent flowers of Richmond and Killarney, while H. C. Steinhoff & Co.'s pot roses were much admired. There was a very fine show of orchids and foliage plants.

President Poehlmann called the business meeting to order at 10 a. m., March 17, and his opening address was well received. The reports of the secretary and treasurer were then presented and Secretary Hammond called attention to the bequest of the late Mrs. Hubbard of Washington, the interest on which is to be devoted to the purchase of a gold medal for the use of the society every fifth year. There was some discussion with regard to increasing the income of the society in which E. G. Hill, W. F. Gude and Wallace R. Pierson participated. The matter was referred to the secretary and treasurer. Boston, the scene of

the National Flower Show next year, was selected as the next meeting place. The following officers were unanimously elected:

W. H. Elliott, president.  
Adolph Farenwald, vice-president.  
Harry O. May, treasurer.  
Benj. Hammond, secretary.  
August Poehlmann and J. A. Valen-

tine were elected members of the executive committee, succeeding E. G. Hill and P. Welch. Wallace R. Pierson was elected to fill the vacancy caused by Adolph Farenwald's election as vice-president. Mr. Farenwald then read his paper on "Roses, the Brightest of Flowers," which was followed by S. B. Sibson's paper on "North Pacific Coast Roses," read by the secretary. W. F. Gude spoke of the death of Mrs. Hubbard and was named, with the secretary, as a committee to prepare suitable resolutions. The addresses of James Wood, on "The Ideals of Horticulture" and Geo. V. Nash on "The Rose and Its History" were presented at the afternoon session.

### President Poehlmann's Address.

It affords me great pleasure to address this large gathering, which may be safely considered the back-bone of our society, also those members of the Horticultural Society who are willing and anxious to assist us, as attested by their presence. Through the courtesy of the trustees of the American Museum of Natural History, we meet here in the eleventh annual convention, and with the hearty co-operation

August Poehlmann.

Wallace R. Pierson.

J. A. Valentine

## NEW MEMBERS AMERICAN ROSE SOCIETY EXECUTIVE COMMITTEE.

of the Horticultural Society of this city, we have made it a success.

Necessarily much of the preliminary work devolved upon a few members of the executive staff, living within easy distance, headed by that able leader, F. R. Pierson, our untiring secretary, Benjamin Hammond, and Joseph Manda, Jr., manager of the show. Many absentees would gladly be present, but for various reasons, principally lack of time, must forego the pleasure and be contented to wait for the reports as transmitted through the trade papers. These have all been largely instrumental in spreading the news, have made faithful reports of whatever copy was sent, and deserve the thanks of this society.

It has been suggested that greater interest in our society would manifest itself, if it were possible to hold our annual meetings and exhibitions in conjunction with the American Carnation Society. This would undoubtedly be true. One could not possibly detract from the other. The scheme ought to be carried through as it will unquestionably lead to good results, and show a large saving of time and money. Co-operation would certainly make for a much larger exhibition and better attendance. The idea is not to incorporate the two bodies into one, but each to remain individually itself. It is not because of the number of societies that many florists object, but they find it impracticable to attend so many different meetings and exhibitions. This is a question requiring further consideration. Today's exhibition speaks for itself.

Nine days less than a year ago we thought that we had the best display of roses at Buffalo. How does our show today compare with it? The spirit of the times must be with us. It permits of no backsliding, but is ever for advancement. Credit is due to those who constantly strive to outdo their previous efforts, and who have brought forth their product for your inspection and judgment.

Joseph A. Manda.  
Superintendent of the Rose Show.

Rose culture is increasing rapidly in all sections of the country. The demand from the south and west is fast increasing. New roses of merit are eagerly sought. The field is constantly widening. Millions of blooms are produced where 10 years ago there were so many thousands. It is indeed a growing business without a limit.

It is not necessary to dwell at length on the aims of the society. Pre-eminently it stands for the advancement and distribution of the rose, as expressed in its desire to place a rose in every home and a bush in every garden. How well this is being accomplished can be told by figures, showing the annual sales of rose plants running well into millions.

New insecticides have greatly lessened the evils of insect pests. Chemical fertilizers, as they are becoming better understood, are being more gen-

erally used, while the good cattle manure is becoming scarcer and each year harder to obtain. Bulletins, issued by the nitrate agencies, contain valuable information to florists regarding the use of the chemical fertilizer.

I have made my address brief because so much matter of value has already been published that little remains to be added. Our programme provides for a number of essays which I am sure will be of high merit, and hold your attention. We gladly welcome new members to our ranks. The secretary will be glad to furnish information as to terms of membership. I want to take this opportunity to thank everyone who has been instrumental in furthering the work of this exhibition on behalf of the American Rose Society and thank you for your kind attention.

## Secretary Hammond's Report.

The records of the year show that the American Rose Society blooms and grows in strength and influence. The idea, "A rose for every home, a bush for every garden," takes hold. During the past 12 months there has come to hand more inquiry for information than ever before, and the weakest point in the organization is the lack of a quarterly publication absolutely its own, that may be sent to every member and to kindred societies. In my opinion, until this is done, the membership will continue restricted.

The interest and fame of the Rose Society is surely increased by the judicious use of its medals. These afford much pleasure and are not bestowed loosely. They carry with them esteem, and when given for good work in home gardens, in the communities where local interest is taken, stir up a lot of earnestness in rose planting. The Annual Bulletin was issued for 1909, being sent to every member and filed in many libraries and is called for by horticultural societies.

The last year, our life membership fund has passed the \$3,000 mark. We hope to see it get to \$30,000, and take

A. Farenwald, Vice-President.

Wm. H. Elliott, President.

Harry O. May, Treasurer.

OFFICERS AMERICAN ROSE SOCIETY.

much pleasure in enrolling more in the life membership, as this insures permanency. The income has been above its regular outgo, but that is not taying much, because the prizes offered regularly each year run up to quite a sum and a year ago a number of gentlemen made up this amount separately from other support.

The exhibition in Buffalo was so well attended by visitors, who after the first day came in such numbers, that four gentlemen from the police force assisted in piloting the crowd, which comprised people who were greatly pleased with the show, and several joined as associate members. This year in the most congested city on the continent, in which there is no room for home gardens, but the taste and appreciation, for things beautiful and lovely, is so great that it is the best flower market we have. Therefore, under the sheltering wings of the Horticultural Society of New York, we make a spread without money and without price, of choice and lovely roses for whosoever will, to admire and to profit by. The florists and gardeners who thus show their products deserve well of all who are thus entertained.

This splendid building, the American Museum of Natural History, where we assemble, is in keeping with our previous experience, where for the queen of flowers, no quarters are too good and our thanks are due to the trustees and others connected with this hall for many gracious attentions. The society owes much, especially to ex-President Simpson, H. O. May, F. R. Pierson, and the executive committee for detail work in doing the many things required for such an exhibition. The American Rose Society is especially favored with many workers who freely serve for the general success.

The Florists' Society of Indiana has filed a request for the annual exhibition to go to Indianapolis in 1912, following the great National Flower Show to be held in the city of Boston.

Benjamin Hammond.  
Secretary American Rose Society.

The Awards.

Display of hardy roses in bloom, first prize offered by Hon. Philip Breitmeyer, Detroit, Mich.—H. C. Steinhoff & Co., West Hoboken, N. J., first.

Collection of teas and hybrid teas, in not less than 5-inch pots, 25 plants or more, first prize offered by John N. May, Summit, N. J.—H. C. Steinhoff & Co., first.

Collection of hybrid perpetuals, 6-inch pots or over, not less than 25 plants, first prize offered by Welch Bros., Boston, Mass.—H. C. Steinhoff & Co., first.

Twelve baby ramblers, any variety, in not less than 4-inch pots.—H. C. Steinhoff & Co., first.

Specimen Crimson Rambler in pot or tub.—H. C. Steinhoff & Co., first.

Specimen Lady Gay in pot or tub.—Julius Roehrs Co., Rutherford, N. J., first.

Specimen Dorothy Perkins in pot or tub.—H. C. Steinhoff & Co., first; Julius Roehrs Co., second.

TWENTY-FIVE CUT BLOOMS—OPEN.

American Beauty (stems not less than four feet nor more than six feet). First prize offered by Arthur T. Boddington, New York.—Gude Bros. Co., Washington, D. C., first; Brant-Hentz Flower Co., Madison, N. J., second.

Bride, first prize offered by A. H. Langjahr, New York.—Poehlmann Bros. Co., Chicago, first; L. B. Coddington, Murray Hill, N. J., second.

Bridesmaid.—Henry Hentz, Jr., Madison, N. J., first; Poehlmann Bros. Co., Chicago, second.

Kaiserin Augusta Victoria.—Robt. Scott & Son, Sharon Hill, Pa., first.

My Maryland, first prize offered by L. B. Coddington.—J. Welch Young, Philadelphia, Pa., first; E. H. Rohr, Madison, N. J., second.

Mrs. Jardine.—Wm. Geiger, Oak Lane, Pa., first; Robt. Scott, second.

Mme. Abel Chatenay.—Robt. Simpson, Clifton, N. J., first; United States Cut Flower Co., Elmira, N. Y., second.

Ivory.—United States Cut Flower Co., first; Gude Bros. Co., second.

Sunrise.—Benj. Dorrance, Dorrance-ton, Pa., first.

Wellesley.—Gude Bros. Co., first.

Killarney, first prize offered by Walter F. Sheridan, New York.—J. Welch Young, first; W. G. Badgley, Chatham, N. J., second.

White Killarney.—F. R. Pierson Co., Tarrytown, N. Y., first.

Richmond, first prize offered by Wm. G. Badgley.—Adolph Farenwald, Roslyn, Pa., first; Edward Towill, Roslyn, Pa., second.

Any other named disseminated variety.—Robt. Simpson, first; Benj. Dorrance, second.

Largest and best collection of teas and hybrid teas, six or more varieties, not less than 12 flowers of a kind, first prize offered by Robt. Simpson, Clifton, N. J.—Gude Bros., first.

Twelve Bridesmaid (open to private gardeners and amateurs only).—Wm. Hastings, Tuxedo, N. Y., first.

SPECIAL PRIZES.

Fifty White Killarney, prize \$25, offered by Poehlmann Bros. Co.—F. R. Pierson Co., first; Waban Rose Conservatories, Natick, Mass., second.

Fifty Killarney.—Prize a silver cup, value \$25, offered by H. F. Michell Co., Philadelphia, Pa.—Poehlmann Bros. Co.

Fifty White Killarney.—Prize a silver cup, value \$25, offered by the Waban Rose Conservatories.—Poehlmann Bros. Co.

New rose, American origin, of 1909 and 1910.—Prize a silver cup, value \$25, offered by Alexander Montgomery, Natick, Mass.—Myers & Samtman, Chestnut Hill, Philadelphia, Pa., with unnamed sport of My Maryland.

Fifty American Beauty.—Prize, \$25, offered by John I. Raynor, New York.—Brant-Hentz Flower Co., Madison, N. J.

Fifty Mrs. Jardine.—Prize, \$25, offered by Robt. Scott & Son.—H. C. Geiger, Philadelphia, Pa.

Thirty-six My Maryland.—Prize \$15, offered by John Cook, Baltimore, Md.—Myers & Samtman.

Six roses, American Beauty excepted, two to be white and four to be red, pink or yellow. Prize, solid silver cup, offered by Moore, Hentz & Nash, New York.—United States Cut Flower Co.

Twenty-five Richmond (open to private gardeners only).—Prizes offered by Stumpp & Walter Co., New York.—Wm. Hastings, Tuxedo, N. Y.,

#### HORTICULTURAL SOCIETY PRIZES.

Twenty cyclamens, special prize, silver cup, offered by R. & J. Farquhar.—James Stuart, Mamaroneck, N. Y., first.

Specimen plant of cyclamen.—James Stuart, first; Mrs. Henry Siegel, second.

Six rhododendrons in not less than three varieties.—Samuel Untermeyer, Yonkers, N. Y., first.

Six schizanthus.—Samuel Untermeyer, first.

Best display of orchids, covering 50 square feet of table space.—Lager & Hurrell, Summit, N. J., first; Julius Roehrs Co., second.

Cattleya Triana.—W. A. Manda, South Orange, N. J., first.

Cattleya Schroederæ.—W. A. Manda, South Orange, N. J., first.

Any other cattleya.—F. L. Moore, Hackensack, N. J., first; Lager & Hurrell, second.

Dendrobium Wardianum.—W. A. Manda, first; Lager & Hurrell, second.

Best and largest display of bay trees.—Julius Roehrs Co., first.

Finest and largest Nephrolepis Bostoniensis.—F. R. Pierson Co., first.

Finest and largest Nephrolepis elegantissima.—F. R. Pierson Co., first.

Finest and largest Nephrolepis Scotti.—F. R. Pierson Co., first.

Finest and largest Nephrolepis Piersoni.—F. R. Pierson Co., first.

Any other nephrolepis.—F. R. Pierson Co., first.

Best display crotons, not less than 25 varieties.—Prize, a silver medal.—Julius Roehrs Co., first.

Best display of stove and greenhouse foliage plants, not less than 25 plants.—Prize, a silver medal.—Julius Roehrs Co., first.

#### Visitors.

On the opening day the following were noted in the exhibition hall: Hon. Philip Breitmeyer, Detroit, Mich.; L. B. Coddington, Murray Hill, N. J.; Peter Crowe, Utica, N. Y.; Thos. Devoy's son, Poughkeepsie, N. Y.; Adolph Farenwald, Roslyn, Pa.; Jas. E. Jones, Richmond, Ind.; W. G. Mac-kindrick, Toronto, Ont., Can.; Harry O. May, Summit, N. J.; Wm. Nicholson, Framingham, Mass.; I. T. Powell, Millbrook, N. J.; L. J. Reuter, Westerly, R. I.; Robt. Simpson, Clifton, N. J.; W. H. Waite, Yonkers, N. Y.; P. Welch,

Boston, Mass.; Wm. F. Kasting, W. J. Palmer, Buffalo, N. Y.; W. G. Badgley, Frank L. Moore, Chatham, N. J.; Fred Lautenschlager, August Poehlmann, Chicago; A. N. Pierson, Wallace R. Pierson, Cromwell, Conn.; Benj. Hammond, Frank E. Whitney, Fishkill, N. Y.; Prof. John Craig, Prof. L. B. Judson, Ithaca, N. Y.; A. Dowling, W. A. Leonard, Lansdowne, Pa.; G. E. Baldwin, James Stuart, Mamaroneck, N. Y.; Geo. W. Hill, F. R. Pierson, Tarrytown, N. Y.; A. Gude, W. F. Gude, O. A. C. Oehmler, Washington, D. C.; John Birnie, Oscar Boehler, H. C. Steinhoff, West Hoboken, N. J.; Ed. Roehrs, Julius Roehrs, Sr., Julius Roehrs, Jr., Theo. Roehrs, Rutherford, N. J.; E. H. Behere, Wm. Duckham, Arthur Herrington, R. M. Schultz, C. H. Totty, Madison, N. J.; Robert Kift, Edward Lowell, Frank Myers, S. S. Pennock, Martin Samtman, Philadelphia, Pa.; F. A. Bolles, Eugene Dailedouze, Henry Dailedouze, Paul Dailedouze, A. H. Langjahr, A. L. Miller, Brooklyn, N. Y.; J. K. Allen, J. J. Coan, Chas. A. Dards, A. F. Faulkner, Wm. Ford, H. E. Froment, A. J. Guttman, Patrick O'Mara, John I. Raynor, Chas. Schenck, W. F. Sheridan, Frank Traendly, John Young, New York.

#### The Rose the Brightest of Flowers.

BY A. FARENWALD.

When I received word to write a paper on the above subject, I felt that it was sent to the wrong man, so I tried to wriggle out of it; but the powers that be wanted me to stick to the gun, and, as I am an enthusiastic member of this society and a lover of roses as well as a grower, I consented.

I shall do my best to honor the queen of flowers. If I fall short, you must remember that I am only a rose grower, not a poet. Of course, there are other flowers in the race, such as orchids, carnations, violets and a host of others. They are all beautiful; they all fill their places, but what one has sufficient popularity to fill the place of queen? With its exquisite form, its graceful carriage, its thousands of different hues of color, coupled with the grandest foliage imaginable, we see in the rose the embodiment of all that is beautiful in the kingdom of flowers. For ages the poets have sung their praise of its charms. The composer has put to music what stirred his soul when face to face with its matchless beauty. Innumerable times the painter has tried to copy its wonderful forms and colors.

Our queen is the symbol of our fondest affections as well as of our deepest sympathy. Her mission is varied, fitting all occasions and all lives. Her bright coloring and delicate perfume are silent messengers of comfort and cheer to the sick in body and soul. She also brings to the memory of most of us thoughts of long ago—"the days of love and roses." No human being can resist the charms of our queen, no matter how lowly his station or how crude his ideas of beauty.

Truly, fellow members, no nobler profession exists than ours, the rose grower's, whose everlasting patience and skill tries to improve on Mother Nature. To think that we send every day to thousands and thousands of homes these messages of love and

cheer. No, we need not be afraid of any other flower taking the place of our beloved queen, as long as we keep on producing and improving in the future as we have done in the past, to which fact the present exhibition testifies. All growers of roses are rose lovers. Whether they produce the flowers for commercial purposes, or simply for pleasure, their aim is one—perfection. A few weeks ago I said publicly in Philadelphia that the carnation was pushing hard for first place. Of course, we know the carnation has its charm, but the rose is its superior, and always will be. It is simply the fact that its producers, as a class, are putting forth their best efforts. But, if all rose growers should strive as hard, what marvelous results might be obtained.

The Rose Society has a motto: "A bush for every garden, a rose for every home." It is to educate the masses of our people to the point of appreciating the value of the rose as a means of culture, so that in the future men will discuss with each other the merits of their several rose gardens, and compare notes on the different varieties. In the spring-time, before leaving in the morning for their places of business in the dark and dusty cities, they will take a run into their gardens and receive an inspiration from the bedewed beauties such as will enable them to wrestle more effectively with the problems of the day. Furthermore, they will enjoy talking to their neighbors and friends on these beauties of nature, instead of simply filling each other's minds, as they do now, with exchanges of opinion on the various sports of the day, stocks and bonds, etc. That education no other flower can bring, as no creation of nature has attained, as I said before, such beauty, and won such universal love as our queen, when once thoroughly understood by the great amateur public.

"The Rose, the Brightest of the Flowers." When I started on this subject, I felt that I could not do it proper justice. But I caught the inspiration as I thought upon it, as everyone must be inspired when once thoroughly aroused to the charms of the queen of flowers. I have tried to convey some of my innermost thoughts on our glorious queen, and doing it has brought back to my memory dreams of long, long ago; and I hope that for some, or all of you, it will also call up memories of the "days of love and roses."

DUBUQUE, IA.—N. A. Harkett has leased the Lyric theater building for a period of five years and will move into it shortly.

ROCHESTER, N. Y.—Geo. T. Boucher, says the Chronicle, is among those who are "doing it for Rochester" to a noteworthy degree. He recently removed his business from 343 Main street east, Triangle building, to No. 345, thereby securing much more room and consequently an opportunity to carry a still greater assortment of flowers and plants. The decorations of the new store are exceedingly beautiful and its entire equipment and arrangement are a credit to the enterprising proprietor.

Spring Show of Pennsylvania Hort Society.

The spring show of the Pennsylvania Horticultural Society was held in conjunction with that of the National Gardeners' Association of the United States in Horticultural Hall, Philadelphia, opening on Tuesday last and closing on Friday evening. The feature of the show was the magnificent collections of bulbous stock, hyacinths, tulips and daffodils. These were never finer and in fact many of the pans of hyacinths and tulips were the best ever exhibited before the society. There were also some splendid specimens of azaleas, gorgeous in color and exceptionally well flowered. Cineraria stellata, fine plants, were seen in many collections. Lilacs and wistarias, tall plants, six feet high, full of clusters of blooms, attracted much attention.

Probably the most showy displays were the long tables filled with entries for the Michell and Waterer prizes. Such tulips and hyacinths, about three dozen bulbs to a pan, are seldom seen. There was also a fine showing of daffodils and narcissi in the other flowering plants. Azaleas were prominent, there being some handsome specimens. One large white, over seven feet in diameter, was a cloud of blossoms and attracted much attention. Cineraria stellata and the large flowered varieties were very conspicuous and much admired. Primula obconica, of which there were a number of exhibits, added much to the show. Easter lilies, callas, yellow and white, lilacs and roses in flower, of which latter there were several entries, were all interesting additions. The groups of foliage and flowering plants, arranged on either side of the hall, were attractive and were the only attempt at decorative effect. The first prize was awarded to Samuel Batchelor; the feature here was very well flowered plants of wistaria, purple and white. The center was a bank of cibotiums, while orchids, callas, heather, cyclamens, and double white cherry, spireas and palms, tastefully arranged, made a rich looking

group. Standard fuchsias, wallflowers, Easter lilies and callas, cinerarias, geraniums, palms, ferns and crotons were also well placed and were much admired. The cut flower display, while not extensive, was of No. 1 quality; roses, carnations, snapdragon, stocks and sweet peas comprised the assortment.

In roses, a vase of Frau Karl Druschki, grown by Wm. Robertson, of exceptional quality, won out over a vase of choice White Killarney. There was but one vase of American Beauty grown by Wm. Kleinheinz, and this was fine. A white carnation named Wodenethe, an extraordinary flower in size and form, was exhibited by T. C. Whitney, Fishkill-on-Hudson, N. Y. This, with a fine entry of sweet peas, from A. Zvolanek, of Boundbrook, N. J., were the only out-of-town exhibits. Wm. Kleinheinz also staged a splendid lot of sweet peas. There were several large vases of snapdragon, exceptionally well grown, and vases of superb stocks, one of Queen Alexandra being exceptionally fine. H. A. Dreer, Inc., staged some choice specimens of Cocos Weddelliana and Phoenix Roebelenii, together with begonias O. H. Moon and His Majesty, two very pretty varieties; a group of variegated pineapple was also a feature. In the lower foyer H. A. Dreer and H. F. Michell made trade displays, as did H. Waterer and Walter Stokes. The Lord & Burnham Co. arranged a display of photographs of fruit-growing houses and pictures of the products grown therein, such as pears and grapes and fruit in pots. Orchid collections of new and rare sorts were made by Pericat, of Philadelphia, and Lager & Hurrel, of Summit, N. J.

K.

YORK, NEB.—A Mr. Lawson has purchased 10 acres of ground here for a greenhouse plant.

SAN FRANCISCO, CALIF.—There was an attendance of 29 at the meeting of the Pacific Coast Horticultural Society March 5 and the lively discussion of trade subjects was quite instructive.

National Association of Gardeners.

The National Association of Gardeners held its annual meeting in the Florists' Club rooms, Philadelphia, Pa., March 16, and elected the following officers to serve for the coming year: Wm. Kleinheinz, president; James Bell, vice-president; W. H. Maywood, secretary and treasurer.

The annual dinner was held on Tuesday evening, March 15, at Dooner's hotel. There was a goodly number of the trade present. President Kleinheinz presided and Robert Leroy was toast-master. F. Kelsey, of New York, made a speech that fairly glistened with good points and we will have more to say of it in the near future. The presentation of the silver cups won at the flower show was a feature. President Kleinheinz was first with 13, one of them of solid gold. Wm. Robertson was second with eight; Wm. Batchelor followed with seven; John Doods carried off two with James Bell, Thos. Zaynor and F. C. Whitney one each.

K.

GALESBURG, ILL.—I. L. Pillsbury says that on March 8 he was granted by the patent office "a register on his staple for mending split carnations."

ELDORA, IA.—J. M. Pierce, of Des Moines, has become interested in an important venture in this city in company with J. S. Pollard, says the Des Moines Register. The firm will be known as the J. S. Pollard Floral Co., and has purchased a large acreage north of the Chicago & Northwestern railway company's tracks and will erect a large number of greenhouse buildings and otherwise improve its property. Mr. Pierce and his son will have an active interest in the management. Mr. Pollard has for some time been conducting a successful greenhouse business and now expects to branch out on a large scale and in due time arrange to establish a large nursery business. The location of the new plant is an ideal one, near the Eldora Riverside park and cemetery and the fair grounds. No better spot could be found in central Iowa for the establishment of such a business as is contemplated by the projectors.

Chrysanthemum Society of America.

Review of the Work of the Examining Committees for the Season of 1909.

PRESIDENT TAFT will surely see to it that the Department of Agriculture add blachthorn and shamrock seeds to its free seed list.

## Notice to Subscribers.

Subscribers not receiving their copies of the paper every week will confer a favor by notifying us promptly.

THIS season's building plans should include a commodious shed for next winter's coal supply.

A TALL ANTIRRHINUM.—In a recent issue of the Gardeners' Chronicle there is an illustration of a plant of Antirrhinum majus 10 feet high, growing in the Botanic Garden at Upsala.

THE average price of glass in the greenhouse sizes is now about \$3.50 per box, according to a prominent glass man, whose views are given at length in the Allied Trades department on page XV.

## National Sweet Pea Society of America.

ADDITIONAL PRIZES FOR 1910 EXHIBITION.

The Peter Henderson & Co.'s prize, \$10 in gold to be awarded the amateur exhibitor of the best and most distinct collection of 25 varieties of sweet peas including not less than six of the Spencer type. The number of sprays to each variety to accord with the society's rules. Also \$10 in gold to be awarded the amateur exhibitor of the two best vases of George Washington and Martha Washington sweet peas. Each vase to contain not less than 25 sprays.

The Henry F. Michell Co.'s prize, \$10 for the best three vases of sweet peas (one vase of each variety). Frank Dolby, White Spencer and Mrs. Alfred Watkins. First prize, \$5; second, \$3; third, \$2.

The C. C. Morse & Co.'s prize, a silver cup value \$25, for the finest collection of sweet peas (open to the trade only).

HARRY A. BUNYARD, Sec'y.

## Society of American Florists.

DEPARTMENT OF REGISTRATION.

As no objections have been filed, public notice is hereby given that the registration of the begonia, Glory of Cincinnati, by J. A. Peterson of Westwood, Cincinnati, O., becomes complete.

H. B. DORNER, Sec'y.

March 10, 1910.

There was a full attendance at the meeting of the executive committee at Rochester, N. Y., March 12-14, including President Pierson, Vice-President Vick, Treasurer Kasting, Secretary Dorner, Ex-Treasurer Beatty, Robert Craig, J. A. Valentine, Judge Vesey, W. N. Rudd, Geo. Asmus, John Young and Eugene Dailedouze. In addition to its usual routine, the committee indorsed the bill before the New York legislature, for which Wm. F. Kasting is largely responsible, carrying an appropriation of \$50,000 for greenhouses at Cornell university, to be used in experimental floriculture, along the lines of the Illinois State university's model pioneer plant. While a large amount of important business was transacted at the meeting, the proceedings were entirely harmonious, and the programme outlined for the convention next August is of such live interest to the trade as to attract a record gathering of old and new members.

The visitors were guests of the Rochester Florists' Association at a banquet in the Seneca hotel, March 14.

About 125 covers were spread, E. S. Osborne officiating as toastmaster. The speakers and toasts were as follows: "The S. A. F." F. R. Pierson; "The Convention," W. N. Rudd; "The Flower City," Wm. C. Barry; "The Ladies," Judge Vesey; "The Flower Show," Prof. L. B. Judson; "The Man That Holds the Bag," W. F. Kasting; "The Retailer," J. A. Valentine; "The Carnation," H. B. Dorner; "The Rose," Geo. Asmus and Prof. John Craig, of Cornell University.

## Bars Live Easter Chickens.

An Associated Press dispatch of March 16, from New York, is to the effect that the American Society for the Prevention of Cruelty to Animals has sent notice to all department stores and to bird and animal dealers that the keeping or selling of newly hatched chickens intended for Easter favors or presents is in violation of laws relating to cruelty to animals. It threatens violators with arrest.

## The Date of Easter.

Easter day is always the first Sunday after the full moon which happens upon or next after March 21; and if the full moon happens upon a Sunday, Easter is the Sunday after. It must be remembered, however, that it is not the actual moon in the heavens, nor even the mean moon of astronomers, that regulates the time of Easter, but an altogether imaginary moon, whose periods are so contrived that the new calendar moon always follows the real moon—sometimes by two, or even three days. The effect of this is, that the fourteenth of the calendar moon which had, from the times of Moses, been considered full moon for ecclesiastical purposes falls generally on the fifteenth or sixteenth of the real moon, and thus after the full moon, which is generally on the fourteenth or fifteenth day. With this explanation, then, of what is meant by full moon, viz., that it is the fourteenth day of the calendar moon, the rule is, that Easter day is always the first Sunday after the paschal full moon, i. e., after the full moon which happens upon or next after March 21. the beginning of the ecclesiastical year.

One object in arranging the calendar moon was that Easter might never fall on the same day, as the Jewish passover. They did occur together, however, on April 14, 1805; April 3, 1825; April 12, 1903; and will do so again on April 1, 1923; April 17, 1927; and April 19, 1981. The Jewish festival usually occurs in passion week, and never before March 26, or after April 25. On the other hand, the Christian festival is never before March 22, or after April 25. In 1761 and 1818 Easter fell on March 22; but neither in this nor the following century will this date recur. In 1913 it will fall on March 23, as it did in 1845 and 1856.

The latest Easter in this or next century occurs on April 25, 1943. In 1848 Easter fell on April 23; in 1859 on April 24; and in 1886 on April 25.

Easter next year, 1911, will fall on April 16, almost three weeks later than this year's festival.

A.

## HELP WANTED.

A first-class man to act as manager of a large commercial place where roses and carnations are grown; must have had experience and be competent to take full charge; good salary to right man. In answering, give full particulars as to experience, etc.

Key 470, care American Florist.

## MAN WANTED

A large retail concern doing a \$150,000 annual business in a big western city desires to engage an experienced man (preferably a man of from 30 to 40 who has had experience in the

floral business as a successful proprietor or manager) as "Overseer."

The right man will be paid a liberal salary and given deserving promotion. The position, however, is one of great responsibility. It will require his presence, in person, on the floor ten or twelve hours per day. His duties, while those of a manager in some respects, shall also include those of stock-keeper, floor-walker, etc. He

must be a man of temperate habits, good appearance and high integrity—a good manager, capable of getting maximum results from an intelligent and wide-awake sales-force. He must know "stock" from A to Z.

Write, giving fullest possible particulars, references and detailed account of your experience. Also state age and salary asked. Address Box AZ, care this paper

We Satisfy Others; We Can Satisfy You.

### Chicago.

#### TRADE VARIABLE.

Shipping business was pretty erratic at the end of last week, some days being remarkably good, while others were just as dull. It is the general feeling though that, taken altogether, there is no cause for dissatisfaction. In looking forward to the end of the lenten season and the Easter demand, and keeping in view the fact that the post-Easter business does not usually slump like that after Christmas, there is every reason for an optimistic view of the situation. It is true that low prices had to be taken to move the stock. It is also true that sending out low prices by telegraph late in the day does not tend to the healthiest kind of trade or to securing early orders at other times from retailers who will wait for these "bargains." But, as one commission man delivered himself: "What are you going to do about it? The stock is here and we must make some kind of a show to our growers." That sums up the situation. There have been too many carnations of late, the commission men have been at their wits' end to move them and it does not do to question the methods too closely. Speaking of the present big carnation cut the prospects are that the Easter cuts will not be any too heavy. Several growers are already going off crop and the large number of late cuttings taken off in other places do not tend to a big cut directly after. Roses, on the other hand, will probably be plentiful and the bright weather is all in favor of the lilies.

Quite an improvement set in on Monday in the shipping trade and, although there was still a large amount of stock, in some lines, almost a scarcity developed. White carna-

tions of the best grade were good property, being much sought for dyeing for St. Patrick's day. Violets did not arrive in such large quantities and a rather better demand, induced probably by the bright weather, helped to clean them up in a way that has been quite unusual the last few weeks. In roses, American Beauty of the best quality is on the short side, but indications are for a big supply shortly. Some growers and commission men have reported themselves as sold up clean on lilies for Easter as far as the crop in sight is concerned. Speaking of the business of the previous week a well known wholesaler said that it had been a very good one as far as amount of money was concerned, but the prices on large quantities were so low that the showing to his growers would be poor in comparison. Three separate orders for 5,000 roses each kept another firm's flowers from piling up. These kind of orders and the thousand and one smaller ones, from out-of-town points, show

what is the real secret of the market's greatness as a flower distributor. When local trade is good, of course quite a quantity of stock is used in the city, but the real standby is the shipping trade which is, notwithstanding the number of small growing places springing up everywhere in the territory served, constantly increasing. Southern reports indicate that it is quite impossible to gather wild smilax owing to the floods and there is a scarcity at present.

Shipping trade continued to increase up to St. Patrick's day and quite a scarcity of white carnations

QUALITY HIGH -- PRICES RIGHT

The stock now arriving is of the finest possible quality, the cool bright weather having been very favorable to its development. Our Growers are in full crop in the leading varieties of Carnations, Roses, Bulb Stock and all seasonable flowers. **We are Strong on Easter Lilies and Callas.**

developed. The demand for dyeing, so far from falling off, increased greatly over that of last or any previous year, and several wholesalers were sold out long before they had filled their orders. Prices in all lines stiffened and good stock of any kind was firmly held by those fortunate enough to have it. American Beauty roses of the best grades were not any too plentiful, and were in the hands of one or two of the principal growers. Short and medium were plentiful. The rose stock is in splendid order, Kaiserin and Mrs. Marshall Field appearing among the offerings. Store spring openings were responsible for considerable quantities of flowers being used.

NOTES.

E. F. Winterson is showing a fine line of cut flowers in all the popular varieties also good Easter plants, such as rambler roses, lily of the valley, azaleas, spiraeas and Boston ferns. Ed can evidently stand a joke as well as give one. We noticed a placard over his counter, probably prepared by some facetious retailer, reading: "President Taft will speak here today on 'Red Violets.' All are welcome."

By the look of the stock at the store, Vaughan & Sperry will be able to take care of all orders entrusted to them, and they report their growers will be in especially good crop for Easter. Among the leaders this week we noted especially good Killarney, White Killarney, Bride and Bridesmaid roses. Pot lilies for Easter will also be a leader here and good cut lilies will be plentiful.

Bassett & Washburn are among the fortunate ones who will be in with a

big crop of Beauties for Easter, the cut just starting. Large quantities of long-stemmed flowers are arriving daily and all the other roses are producing well. The shipping demand here has been exceptionally heavy of late and Mr. Washburn says their demand for white carnations for St. Patrick's day was by far the largest on record.

Nic Miller, of the J. B. Deamud Co., made a very successful trip among the Michigan growers last week. He secured a big supply of lilies for Easter for his house, both in pots and cut, and roped in several growers of cut flowers so the "busiest house" will be able to take the best care of its patrons for Easter along these lines.

Good lilies and carnations have been the features of a very busy week at E. H. Hunt's.

## A. L. RANDALL CO.,

WHOLESALE FLORISTS,

Long Distance Phone Central 1496.  
Private Exchange all Departments.

19-21 Randolph St., CHICAGO.

The sympathy of his many friends in the local trade will be extended to Clement A. (Gus) Alles of the Wietor Bros.' force, on account of the death of his father, Nicholas Alles, which occurred at his home, 1692 Devon avenue March 13, from dropsy. Mr. Alles had been more or less sick for six years but his wonderful constitution and vitality kept him going and he was playing the organ at St. Henry's church, where he was organist, on Thursday of last week. He was of German birth, came to this country 45 years ago and married here, his wife, three sons and one daughter surviving him. The funeral services were at St. Henry's church on Wednesday and the interment was at the cemetery adjoining the church.

Poehlmann Bros. Co. is cutting an average of 3,000 Beauties per day now, many of them long stemmed and all of them of good quality. Lilies are also being shipped in from the green-houses in large quantities and in fine condition. My Maryland roses are superb here, as indeed are all the varieties now coming in.

Kaiserin and Field roses are appearing among the stock at J. A. Budlong's and these make quite a pleasing variety. Out-of-town trade here claims most of the attention of the sales force, orders having been heavy during the week. The stock, as usual, is of the finest possible quality.

On Friday of last week Kyle & Foerster's place looked like the shipping room of a big factory. They had an extremely busy week end in shipping trade packing and sending out immense quantities of the best class of stock, carnations, roses, lilies and violets being the leading items.

Peter Reinberg has been receiving magnificent White Perfection carnations in large quantities all the week, as well as other varieties. This house certainly has the goods all right and no orders, large or small, will be turned down for Easter. The roses are also exceptionally good.

Hoerber Bros. are showing some of the finest Bride and Bridesmaid roses of the season. Bridesmaid will not be so heavily grown at the Desplaines plant the coming season, but large plantings of White Killarney will be made. George Pieser resigned his position here March 11.

Zech & Mann report business brisk and it should be with the excellent

stock they are showing. Roses, bulb stock and lilies, all of good quality, have been leaders. Geo. Pieser, late of the Hoerber Bros.' force, is now with the above firm.

Further portions of the Garfield park conservatory have to be reconstructed at a cost of \$56,122 and the contract for this house, in 1907, was \$185,000, repairs since then having made the total \$259,122.

President August Poehlmann, of the American Rose Society, left by the 10:30 a. m. limited over the Pennsylvania, March 14, for New York, to attend the annual meeting and exhibition of the society.

Hauswirth had the professionals' floral piece for the funeral of Jake Schaefer, the billiard player, March 13. It was a billiard table in red and white carnations, two feet by four feet and 15 inches high.

Winterson's Seed Store received a heavy consignment of Holland nursery stock this week, consisting of boxwoods, ampelopsis and various shrubs and trees. Trade in seeds is starting in well.

John Mangel has been busy with funeral work and one fine wreath noted, of My Maryland roses over galax, was very beautiful. John buys the finest quality stock and handles a lot of it.

Miss Gunterberg, of the Flower Growers' Market, has been handling large quantities of white carnations and also reports that her specialty—violets—have cleaned up much better of late.

Wm. Abrahamson, formerly a commission buyer on this market, but now of Denver, Colo., filed a petition in

bankruptcy, February 22. He is stated to have no assets.

The Horticultural Society's preliminary premium list is out and copies may be had on application to Secretary J. H. Burdett, 1620 W. 104th place, this city.

Edward Amperpohl has been looking up Easter stock. He reports trade good at Janesville, Wis., and bedding and cut flower stock coming along in great shape.

John Sinner, of Sinner Bros., says that trade has picked up considerably during the week, especially the out-of-town shipping business.

Exceptionally good sweet peas were one of the leaders at E. C. Amling's this week and Easter lilies have been showing up in fine form.

John C. Behrer, accountant at Vaughan's Seed Store, is democratic candidate for alderman in the Seventh ward.

Adolph Malchow is rejoicing in the arrival of a boy at his home March 10. Mr. Malchow reports business good.

B. O'Neil was in town this week looking things over for Easter. He reports trade at Elgin as excellent.

Andrew McAdams and wife expect to reach home next week.

Visitors: J. A. Valentine, Denver, Colo.; H. B. Dornier, Urbana; A. R. Leidiger of Edlefsen and Leidiger, Milwaukee, Wis.; E. Amerpohl, Janesville, Wis.; V. Gorly, of Grimm & Gorly, St. Louis, Mo.; R. J. Windler, St. Louis, Mo.; Martin Reakauf, representing Bayersdorfers, Philadelphia, Pa.; James Aldous, Jr., and wife, Iowa City, Ia.; B. O'Neil and Fred Plagge, Elgin.

#### TRADE FAIR.

The weather the past week has been beautifully clear, neither too cold nor too hot. Carnations have held up well. White has been in demand. Roses, too, have not been over plentiful but a good supply is expected for Easter. From reports we believe that many lilies will not arrive on time for Easter and that quite a large number will reach the market a week to 10 days late. The cool bright weather has helped violets some.

#### NOTES.

Miss Hilda Damann, for 17 years in the employ of C. Young & Sons Co., is to be married to Mr. Monk in the near future. Miss Marguerite Killian, the pretty typewriter at C. Young & Sons Co., is reported to be in the matrimonial list also. Jim Young seems to run a matrimonial bureau in connection with his floral establishment.

The Florists' Protective Association will meet again this week. The retailers are anxious to protect their rights and they desire the co-operation of all those who are desirous of raising the trade to its very highest level to cut out all objectionable ways of going after business.

Mrs. E. K. Diemer is now, since the death of her husband, manager of the Diemer Floral Co., assisted by two able assistants. She will put in a fine stock of flowering plants for Easter. She is doing a splendid trade.

The Florists' Club met last Thursday, over 20 members being present.

# Easter Lilies

Fine  
Stock.

We expect to cut 25,000 to 30,000 blooms. Prices, cut \$12.50 and \$15.00 per 100; pot plants, per bud, \$16.00 per 100.

We have them in single pots and pans, three and five bulbs to a pan. Fine clean stock. We can ship now, plants in bud, that will be just right for Easter.

Cash with order or satisfactory reference.

## MIAMI FLORAL CO., 24 North Main Street, Dayton, O.

Resolutions were passed on the death of Mr. Van Hook, who died suddenly last Monday and sympathy was extended to the family.

F. H. Weber's store is a beautiful sight and he is always busy. He was putting up some fine mantel decorations during the past week and will have a fine supply of lilies and other plants.

Henry Lawrence, of the Park Floral Co., who has been on the sick list for some time, is now again in harness and down at the store attending to his duties.

Geo. Angermueller expects a fine lot of flowers for Easter. He is receiving some fine Harrisii and callas, also fancy grade roses.

### EASTER PREPARATIONS.

The time of the storekeepers the past week has been mostly taken up looking up plants for their Easter stock. The help in the meantime have had plenty of opportunity to get the places in order and make room for extensive displays, as the business has been very light. There is, with the exception of American Beauty roses, great quantities of everything and prices rule low. The principal things in demand are pink roses, sweet peas and bulbous stock. The first of the southern daffodils arrived the past week; they were Princeps and sold at from \$4 to \$5 per 1,000. Southern arbutus is also in and sells well at from \$1.50 to \$2.50 per dozen bunches. It is a great favorite with buyers and the street men readily pay as much or even more than the store men for it. It is said that Easter lilies will be scarce for next week's delivery. This refers to both pots and cut. There is one thing certain, there is an abundance of very short stock about, so many of the growers not being able to get the plants over 12 inches above the pots. This is particularly true of the Giganteums, which are very short with almost everyone. These will make very poor stock for cutting, as the store trade requires stems of from 18 inches to two feet or over. Hydrangeas are also very short, the hard forcing seeming to have retarded their growth. The dealers hereabouts are a little nervous as to laying in a large stock on account of the unsettled condition of the street car strike. While the accounts spread broadcast by the papers over the country are very high colored and exaggerated, as the streets have not been running with blood, and there has been comparatively little disorder except by a few rowdies who have broken car windows, there is a spirit of unrest owing to the sympathy strike of other trades. For instance, the plumbers are mostly out and quite a number of other mechanics in trades which have been unionized. The cars are running fairly well now and there is very little disorder and it is hoped it will be settled before next week.

### EASTER PLANTS AT HARRIS'.

One of the show places at this season is that of Wm. K. Harris. We question if there is an establishment in this country where such uniformly good stock in such quantity and great variety as is seen here. It was always the pleasure of the late Wm. K. Harris to have his friends and the neighbors for blocks around come and enjoy what to them was a great treat. The establishment was always fixed up for these visitors on Palm Sunday. All the orders to go out on Monday were selected on Saturday and arranged along the sides of the great packing shed 30 feet wide by 300 feet in length. This made a great floral avenue, off which the greenhouses opened on the right and left. Last

season it was estimated that over 8,000 people passed through the houses and viewed this beautiful display. The feature of the stock this season is the azaleas, of which there is an immense variety of plants in all sizes. They are a very fine lot well budded. All the best commercial sorts are seen, a number having been imported in the spring, particularly those that set buds better here than in Europe.

Other features are hydrangeas, which are always well done. A number of very well colored blue ones are much in demand. Deutzias are also a feature and are flowered extremely well, every branch being loaded with buds. This is made possible by the late summer and fall treatment. There are several houses of lilies which grade

very high. A bench of the true Harrisii, some of the original stock or strain, is kept for stock in an endeavor to secure sufficient for the needs of the place. It is absolutely without disease. Bougainvilleas, some very large specimens, are seen with their vases of colored flowers, one of these graceful masses of color is a decoration in itself. Rhododendrons are also seen in quantity amongst them some very large specimens. There are two large houses of gardenias in from 6 to 10-inch pots. The bushy 6-inch stock with from eight to twelve buds and some open flowers should sell almost on sight. We have never seen them done so well before. Genistas, spireas and small blocks of other Easter plants in which Baby and Crimson Rambler roses, several full houses of them, figure, make up what is truly a magnificent Easter stock.

J. William Colflesh, proprietor of the Merriheights Nurseries, is very proud of his collection of Easter stock. His specialties are azaleas, daisies, cinerarias and bulbous stock. His strain of cinerarias, much of it from crosses of his own, is very fine. There is also a good batch of Easter lilies, hydrangeas and spireas.

TRADE SLOW.

Business was slow throughout the most of last week. Monday was a fair day, but by Wednesday trade was in a rut, and remained so until Saturday, when there was another slight revival. The volume of stock is increasing and present conditions of clear sunshine promise to bring in much more of it at an early date. American Beauty roses are more plentiful and prices are falling. Other stocks are plentiful. A feature of the market is the poor quality of violets that are arriving. We have heard no satisfactory explanation of this. The weather has not yet been warm enough to hurt the crop but the fact remains that many violets are small and have a sickly appearance.

THE ROSE SHOW.

The exhibition and meetings of the American Rose Society at the American Museum of Natural History made this a busy and interesting week. The first meeting opened March 16 at 7:30 p. m.

NOTES.

Growers, wholesalers and retailers are all looking forward with keen anticipation to Easter. It seems certain that there will be fine stock of cut flowers and plants. The wholesalers are chiefly interested in the cut flowers. Traendly & Schenck will come out strong with orchids and roses. H. E. Froment will handle a heavy cut of roses and other seasonable flowers. Ford Bros. are specialists in roses and carnations. Alfred H. Langjahr states that he will handle a cut of lilies running well up to 100,000 flowers.

It is the plans of the dinner committee of the Florists' Club to make the annual dinner on the night of March 17, when the members of the Rose Society will be entertained, an elaborate and interesting event. Chairman Sheridan of the committee is very thorough and capable in all he undertakes and he has a good committee. John B. Nugent, Jr., will look after the music and promises a fine programme.

Kamakiehi Suzuki, of the Yokohama Nursery Co., is spending a month in this city with headquarters at the Barclay street offices of his com-

pany. He will attend the Anglo-Japanese exhibition which opens in London early in the season. Chas. Loechner, of this company, who has been in the Norwegian hospital, Brooklyn, since Christmas, with a broken leg, has so far recovered as to be able to leave the hospital, but has not yet got back to business.

John P. Cleary, manager of the Fruit Auction Co.'s horticultural department recently returned from his annual European trip among the nurseries. He is now ready for a strenuous business season and reports having received much business from leading growers of Holland, Belgium and England. His company is prepared for a big Easter business and has been holding auctions this week, March 14 excepted.

Julius Roehrs, Sr., of Rutherford, N. J., who has spent a part of the winter seeing southern climes, has returned home in fine health and spirits.

### New York Florists' Club.

The regular monthly meeting of the Florists' Club was held in the Grand Opera house building on the night of March 14, President Miller in the chair. Walter F. Sheridan, chairman of the dinner committee, made a comprehensive report. As previously noted, Patrick O'Mara will be toastmaster, and John B. Nugent, Jr., has arranged for an elaborate musical programme. Appropriate resolutions on the death of Mr. Scott, father of C. W. Scott, a member of the club, were read and approved.

Harry Bunyard reported for the outing committee, that the annual outing of the club will be held at Witzel's Point View Grove on July 1. The steamer Isabel will convey the excursionists to the grove. A. Hanig, of Brooklyn, was elected a member of the club. Chas. Krick, of Brooklyn, was nominated for membership. Secretary

North Carolina Evergreen Co., Banners Elk, N. C.

Minneapolis.

The Minneapolis Floral Co., of which the jovial John Munson is the proprietor, has a range of 225,000 square feet of glass, in which is grown roses, carnations, bulb stock, greens, palms and spring stock for bedding. Carnations planted number 5,000, consisting of Enchantress, Lawson, Beacon and Winsor. Roses are Richmond, Killarney, White Killarney, Kate Moulton, Chateaux and Bride. Pot stock for Easter consists of lilies, azaleas, hydrangeas, rambler roses, spireas, rhododendrons, standard snowballs, apples and Japanese peaches; also tulips, valley and narcissus. A fine collection of stock which in quality cannot be surpassed has given John a smile which we hope will never come off.

The greatest flower show ever seen in the northwest is what President Theodore Wirth promises for the first annual exhibition of the Minnesota State Florists' Association to be given in the Armory in November. The show comes to this city because this city promised a guarantee fund of \$15,000

## The Seed Trade.

### American Seed Trade Association.

J. C. Robinson, Waterloo, Neb., Pres.; M. H. Duryea, New York, First Vice-Pres.; F. W. Bolgiano, Washington, D.C., Second Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas., Leonard H. Vaughan, Chicago, Asst. Sec'y. Twenty-eighth annual convention, at Atlantic City, N. J. June 21, 1910.

Low vitality tests on sweet corn continue to come in.

CALIFORNIA freesias were slightly damaged by recent frosts.

AN interesting article on French bulbs will be found on page 368.

CHAS. P. BRASLAN writes from San Jose, Calif., stating that he will leave for the east soon, on his way to Europe.

THE onion set market at Chicago, which has been hanging on the ragged edge of a break for some days, stiffened a little this week.

ATLANTA, GA.—The McMillan Seed Co. has applied for a charter of incorporation. J. C. McMillan and C. L. Fain are incorporators and the capital stock is \$6,000.

Now that seedsmen are to be compelled to use transparent packets, of course the Department of Agriculture will be put under the same rule with their free seed packets.

BOTH counter and mail trade in eastern cities have been good the past 10 days, while in the west the increase has been good, though the weather continues cool.

SANTA CLARA VALLEY onion seed growers are looking for spring rains as the rainfall so far has been pretty light. Those who are growing at Tyler Island believe they are in better shape than the valley growers to fight the drought.

AT a conference of sealers of weights and measures in Washington a resolution was adopted urging congress to pass a law compelling manufacturers of all packet goods to print upon the outside of their packages a statement of the net contents in units of weight or measure.

CHICAGO.—Contract prices on the board of trade March 16 for grass seed were noted as follows: Timothy, \$4.30 nominal. White clover, from 20 cents to 25 cents.—Visitors: John Lewis Childs, returning from California; J. F. Garfat, representing Hogg & Lytle, Port Huron, Mich.

### Manchurian Corn.

ED. AMERICAN FLORIST:—

We note in your issue of February 12 an article on new kinds of corn from China. It might be interesting to your readers to know that not only have they some varieties of corn in China and Japan which are merchantable, but the fact that through the port of Seattle alone, during the last three months, there has been over 500 tons of Japanese corn imported and distributed among the farmers in this section of the state. Of course, the reason and only reason for importing this corn was that the dealers here

In the Nick of Time.

—Chicago Tribune.

could buy it cheaper than they could buy corn from Iowa and Nebraska. It does indeed look serious when the United States with its unexcelled production of corn has to import corn from the orient.

CHAS. H. LULLY Co.  
Seattle, Wash.

### Cost of Mailing Government Free Seeds.

Representative Sims, of Tennessee, has had inserted in the records a statement he had obtained from the Agricultural Department showing the weight and cost of transporting seed distributed by senators and representatives. The department says that the total weight of vegetable seeds sent through the mails, including the containers, is 1,351,190 pounds. The postage on vegetable seeds at second-class rates would be \$135,513.90 annually. The total weight of flower seeds sent through the mails last year was 76,073 pounds on which the total postage, if paid would be \$760.63.—Pittsburg Leader.

## Peas AND Beans

Growers for the Wholesale Trade.  
**GRAND RAPIDS, MICH.**

### Seed Packets Must be Transparent.

The following letter has been sent out to seedsmen in large cities by the local postmasters:

I have the honor to inform you that I am in receipt, this day, of a communication from the honorable third assistant postmaster general, Washington, D. C., instancing a case in point where seeds in an opaque sealed envelope were rated at the office of delivery with due postage at the first-class rate, because the envelope containing the seeds was not sufficiently transparent to clearly show the contents as required by the postal regulations.

This was one of several cases brought to the attention of the Post Office department, from which it appeared that the mailings of seed concerns were not always in harmony with paragraph 5, section 496, postal laws and regulations, which reads as follows:

"Seeds x x x which are liable from their form or nature to loss or damage, unless specially protected, must be put up in sealed envelopes made of material sufficiently transparent to show the contents clearly without opening."

The honorable third assistant postmaster general also directs me to immediately bring the provisions of the postal laws and Regulations cited to the attention of the seed concerns of this city, and to advise them that mailings of such seeds on and after July 1, next, cannot be accepted at the third-class rate of postage, unless the requirements of the aforesaid regulations are met.

I trust that this information will be all that is necessary to adjust your mailings in conformity with these regulations. If not, I would be pleased to convey any further information desired.

[It is reported that a committee of eastern mail order seedsmen will call on the postmaster general at Washington shortly with regard to this matter.—Ed.]

### Imports.

During the week ending March 5 imports were received at New York as follows:

H. Frank Darrow, 150 packages seed, 37 cases trees and shrubs, 30 cases plants.

Peter Henderson & Co., 10 bags, 35 packages seeds.

O. G. Hempstead & Son, 27 cases plants, 7 cases trees and shrubs.

F. B. Vandegriff & Co., 20 bags seed, 41 packages, 17 cases trees and shrubs, 3 barrels bulbs.

Stumpp & Walter Co., 4 cases trees. Vaughan's Seed Store, 20 cases trees and shrubs, 5 barrels seed, 10 cases mushroom spawn.

Reed & Keller, 6 crates plants.

J. M. Thorburn & Co., 8 barrels seed.

Maltus & Ware, 284 cases, 50 tubs, 141 packages trees and shrubs.

McHutchison & Co., 95 cases trees and shrubs, 102 cases plants, 10 cases seed.

W. Elliott & Sons, 58 cases trees and shrubs.

P. Ouwerkerk, 226 cases trees.

To others: 890 bags, 3 cases, 10 packages seed, 148 cases, 88 packages trees and shrubs, 67 cases, 1 box, 7 packages plants.

### A New Potato Disease.

The wart disease is a new enemy of the potato crop which is attracting great attention in Europe, and which is liable to be introduced into the United States at any time. It affects the tubers, forming large, rough, unsightly warts, and, in severe attacks, completely destroys the crop. Once the fungus gets into the soil, it is impossible to grow a crop of potatoes on the land for several years.

The fungus which causes this disease was discovered in 1896 in potatoes grown in Hungary. It is now prevalent in many places in England, and there is great danger that it may spread to Ireland. It is also found in Germany and some other European countries. It has been carried to Newfoundland, but has not yet appeared in the United States. It is spread by using affected potatoes for seed, and, as this country imports considerable quantities of potatoes every year, there is danger that it may be introduced. The Department of Agriculture has recently issued a circular (for free distribution), giving a brief account of this disease.

### A New Grape Barrel.

Consular Agent A. E. Carleton, of Almeria, Spain, reports the invention at that place of a barrel for grapes, for which many advantages are claimed. The barrel is cylindrical, and has four compartments, so constructed that the grapes will receive all needed ventilation. Each compartment will hold 12 pounds of fruit, which will keep better, it is claimed, than in the present barrel where the whole quantity, say 50 pounds, is packed together. The entire barrel can be made by machinery and there is practically no waste of wood. Any kind of wood may be used. A company has been formed to exploit the invention and enough orders have already been received to warrant the purchase of the machinery needed. The name of the inventor is on file at the bureau of manufactures, Washington, D. C.

### Prices of Indoor Fruits and Vegetables.

New York, March 12.—Mushrooms, 50 cents per pound; cucumbers, \$1.75 to \$2.50 per dozen; lettuce, \$1 to \$1.25 per dozen heads; tomatoes, 30 cents per pound; radishes, 3 cents per bunch; asparagus, white, \$12 per dozen bunches, green, \$15 per dozen bunches; rhubarb, 75 cents per dozen bunches; mint, \$1 per dozen bunches; beet tops, \$1.50 per bushel; grapes, Gros Colman, 75 cents per pound; peaches, \$2 per dozen.

## The Nursery Trade

### American Association of Nurserymen.

F. H. Stannard, Ottawa, Kans., President;  
W. P. Stark, Louisiana, Mo., Vice-President;  
John Hall, Rochester, N. Y., Sec'y.  
Thirty-fifth annual convention to be held  
at Denver, Colo., June 8-10, 1910.

STURGEON BAY, WIS.—The Sturgeon Bay Orchard & Nursery Co. has increased its capital from \$20,000 to \$40,000.

WE have received the Twenty-fourth Annual Report of the Minneapolis board of park commissioners with many handsome illustrations and maps and much valuable text.

DUNDEE, ILL.—The D. Hill Nursery Co. has been incorporated, with capital stock, \$25,000 to do a general nursery business. David Hill, Geo. W. Hill, Arthur H. Hill and Vernon D. Hill are the incorporators.

WEST BERKELEY, CALIF.—The E. Gill Nursery Co. has just purchased 85 acres of land at Edenvale, six miles south of San Jose, which is now being planted to nursery stock. This place will be run in connection with the home place, where field-grown roses for the wholesale trade are made a specialty.

### Notes from Rochester, N. Y.

March 12 is perhaps a little premature to speak of the final effects of the winter on plant life. Judging, however, from present appearances, everything appears to have wintered remarkably well. According to the weather bureau reports the mean temperature of last December and January was 26°, which represented two degrees below normal. The lowest temperature was 2½ degrees below zero. During February snow fell to a depth of 26 inches. During the past 10 days most of the snow has disappeared. To all appearances the subsoil is thoroughly soaked to a considerable depth. Last fall and during early winter the subsoil in our region appeared to be abnormally dry, and as all horticulturists agree in the theory that trees, shrubs and plants entering the winter with their roots suffering from a lack of water supply are liable to suffer from the effects of winter's cold, we are agreeably surprised to note the excellent condition at the present time—but of course we are not quite out of the wood yet.

Rhododendrons look almost as well as they did last October, with the exceptions of Charles Bagley, Madame Carvahio and Coeruleseus, on which a few of the leaves are slightly browned, but hardly enough to be noticeable, and it will not affect their flowering in the slightest degree. The dwarf rhododendrons such as R. arbutifolium, R. ovatum and R. myrtifolium hardly ever escape any winter with us without more or less scorching of their leaves, but I think I never saw them look better than they do at present. In walking through the pinetum today and taking notes all the conifers appeared to be in the best

of health. Even the cedar of Lebanon, Lawson's cypress, Cephalonian fir and the Nootka Sound cypress which are always liable to be scorched with us in winter show no signs of injury at present. Snowdrops were in full bloom March 3 and the Japanese witchhazel on March 7.

JOHN DUNBAR.

### Notes on Nuts.

Nut bearing trees planted along all the small branches and in the fence corners will increase the beauty and value of the farm. Probably no other field of undeveloped natural resources in all the domain of diversified production offers richer and happier results than does nut culture.

The advent of the budded and grafted pecan has removed the greatest uncertainty in the pecan industry. One may now not only be sure that his trees will bear, but that they will do so at a reasonably early age. The pecan ranks first as a table nut; it ranks first in quality of fat oil; it ranks first in food value per pound over all nuts. It is acknowledged by confectioners as the richest and most valuable. In the production of oil it gives the greatest quantity of the richest nut oil.

Nature has so arranged it that some kind of nuts will thrive in almost every locality. The hickory nut does well in the north, the chestnut in the central states, and the pecan in the south. Walnuts thrive well everywhere. All of these are profitable for nuts and timber and are ornamental for shade.

The subject of pecan culture was admirably treated at the American Pomological Society meeting at St. Catharines, Ontario, by H. H. Hume, of Florida, and S. H. James, of Louisiana. Both papers treated the possibilities of pecan culture in a sensible reasonable manner. The glamour and

## When Traveling in Europe

Do not forget to inspect our nurseries. We grow immense quantities of Rhododendrons, Azaleas, Magnolias, Boxwood, Conifers, Pot-grown plants for forcing, Lily of the Valley, Evergreens, etc. of high grade and quality. Our nurseries are on sandy soil from which trees transplant readily. From Amsterdam to our nurseries it is only 25 minutes by rail and a train runs every hour.

romantic possibilities may be said to have been peeled off and the great future of the industry sketched without exaggeration. Both believed that there was a large future for pecan culture in the south west and that when the propagated varieties came into the market the demand for the improved nut would increase very rapidly. A pecan investment might be regarded as a staple and permanent one. Chestnut culture was treated by J. C. Reist of Pennsylvania.

## Verbenas [for Everybody.....

Enchantress Carnations, R. C. very strong, \$2.25 per 100; \$20.00 per 1000.

C. HUMFELD, The Rooted Cutting Specialist, CLAY CENTER, KANS.

Boston.

A VERY FAIR WEEK.

This has been a very fair week. There was considerable surplus along certain lines, but on the whole conditions were not bad. Violets are falling off perceptibly in size and color. Carnations are coming in more freely all the time and there is a ready market for all but the red shades. Bulbous stock is coming in good and heavy and occasionally gets ahead of the demand. The cheaper stock finds its way to the streets through the medium of the fakirs. Good roses are short and the outlook for first class stock for Easter is not very bright. There seems to be plenty of medium and short roses of all kinds, Chateaufort, My Maryland and Richmond all coming good in color. The new rose (Ward) is coming in limited quantities. Beauties are still scarce and the price keeps up. Valley, gardenias and cattleyas are coming in sufficient numbers to meet all demands. Sweet peas are quite plentiful. Lilies are plentiful and selling well. The plant trade is holding up strong.

#### NOTES.

Welch Bros. report prospects good for a heavy Easter trade. They have arranged for a most complete line of plants and cut flowers. Special attention will be given to the crating and shipping of flowering plants, the safe arrival of which means so much to the out-of-town dealers.

We had the pleasure of a visit from Ernst Wienhoeber and his son, of Chicago, this week. They visited as many of the prominent establishments in the trade as their time permitted and left the city with a most pleasant impression.

Edward Crowley has resigned his position with Donald Carmichael of Wellesley and has opened a retail store in Waltham. Mr. Crowley is well known in the trade and his many friends wish him success in his new enterprise.

The snapdragon grown by Hardy of Natick and handled by E. Fletcher, is worthy of special mention. It makes a valuable flower for use in tall vases and comes in an attractive variety of colors.

L. Carbone's stores are both full of novelties in tempting display. Easter is a particularly busy time with this firm as the line of goods is so extensive that all tastes can be gratified.

The quantity of shamrock plants in various sizes of pots and pans disposed of at this time of year has increased almost beyond belief.

The H. M. Robinson Co. is making plans for a banner Easter trade. The advance orders are coming in heavy and the outlook is bright.

Of the finest varieties that ever grew, 70c per 100; \$6.00 per 1000.

Mums, the good kind, \$1.25 per 100; \$10.00 per 1000.

Daisies, white and yellow, \$1.00 per 100; \$8.00 per 1000. Our big double **Giant Alyssum**, 80c per 100; \$7.00 per 1000.

Feverfew, \$1.25 per 100; \$10.00 per 1000.

We prepay express charges on all rooted cuttings and guarantee satisfaction.

C. very strong, \$2.25 per 100; \$20.00 per 1000.

HEADQUARTERS FOR

# Easter Plants

Azalea Indica One of Our Specialties

Lilies, Spireas, Hydrangeas, Cinerarias

**Azalea Indica.** Don't be bluffed. Be careful, consider what you buy, and from whom you buy. We are the people in Azaleas. Have the real thing. Why? We make a specialty of importing Azaleas. Have sufficient capital to buy for cash in Belgium. Therefore we get the Cream of Belgium production. Full of buds and foliage, a picture of health.

Look! Listen! Stop making those goo-goo eyes. How can I help it? Aschmann's Lilies are looking so charming, and his Azaleas, Cinerarias and other plants are a sight. I am just like bewitched. They are always before my eyes. I see them in my dreams. Aschmann himself looks so inviting. No wonder I am making goo-goo eyes. I will mail him an Easter order today.

## Azalea Indica Our Specialty

In bloom and bud for Easter, ready for shipment on a moment's notice.

Mme. Van der Cruyssen, one of the best leading pink varieties, so well known to every florist in America and Europe, and so covered with buds and flowers that the foliage is hidden. Price: 75c, \$1.00, \$1.25, \$1.50, \$2.00 to \$2.50.

We have other leading varieties in large sizes, also covered with buds: Bernard Andreas Alba, white; Niobe, double white; Helena Thielmann, light pink, one of the finest; Souv. Memoire de Van Houtte, very large flowers, double pink; Empress des Indes, large flowering, double variegated; De Schryveriana, double variegated, very handsome, and a few others, Vervaneana, etc. Price: \$1.50, \$2.00, \$2.50 to \$3.00.

In smaller sizes we have the following varieties, full of buds: Mme. Van der Cruyssen pink; Deutsche Perle, pure double white; Vervaneana, double variegated, one of the old standard varieties; Apollo, red; Simon Mardner, double pink; De Schryveriana, large double variegated; Empress des Indes, double variegated; Niobe, double white. Price, 60c, 75c, \$1.00, \$1.25 to \$1.50. Professor Wolters a well known variegated bright variety, at \$1.00, \$1.25 to \$1.50.

When we are out of one color we send the next similar color; also if we are out of the size ordered, we send the next size, either above or below the price mentioned.

**Moonvines** (Ipomoea Multiflora), best white Moonvine, for which we have a world wide reputation now ready. 2 1/2 in. pots, \$5.10 per 100.

**Begonia New Improved Erford**, 5 in., \$2.00 per doz.; **Begonia Flambeau**, 5 in., \$2.00 per doz.

**Spirea Gladstone**. This variety, owing to the dry summer in Holland last year, is very scarce this Easter but we were fortunate enough to secure sufficient to fill our usual house, and the plants are now in fine condition, full of buds, just right for Easter. 6-7 in. pots, 75c to \$1.00 each.

**Primula Obconica**, 5 in. pots, \$2.00 to \$2.50 per doz.

**Double Daffodils**, Von Sion best yellow, 3 double-nosed bulbs in a 6 in. pot, \$2.50 per doz. pots.

**Tulips**, Murillo (double pink) 3 bulbs planted in a 4 in. pot, \$2.00 per doz. pots. **Tournefort Tulips** (double variegated), 3 bulbs in a 4 in. pot, \$1.50 per doz. pots; ready in bloom for Easter.

**Kentia Forsteriana**, 6-7 in. pots, 35 to 50 in. high, perfect leaves, \$1.25 to \$1.50, \$2.50 to \$3.00; 4 in., 20c. **Kentia Beimoreana**, 6 in., large stock, \$1.25 to \$1.50; 4 in., 20c to 25c; 3 in., 10c.

**Ficus Elastica** (Rubber), 5 1/2 to 6 in. pots, 25c to 30c.

**Hydrangea Otaksa**, already forced into buds, just right for Easter, 6-7 in. pots, 35c, 50c, 75c, \$1.00 to \$1.50 each.

If you would know the fairest sight your eyes can ever see,

Where the most perfect plants are grown, to Aschmann's come with me.

Why! Ne'er since flowers began to bloom was such a glorious show

Of all the best that florists need found in one place to grow.

The lilies are the very best yet seen on Easter day, Azaleas are whole steets of flower-, perfect in every way.

The Araucarias matchless are, so are the ferns, all green,

With bulbs and plumed Spirea, the best you've ever seen.

And Aschmann gives a challenge, let every florist hear.

For flowers or prices, either, no rival does he fear.

If you wish to gather dollars, like violets in the spring,

Then send your largest order, his plants the cash will bring.

## Easter Lilies

**Lilium Multiflorum.** The Genuine Japanese Easter Lily. 6-in. pots, plants having 5, 6, 7, 8 and 10 buds and flowers, 10c per bud and flower. Plants having under 5 buds, 2-3-4 buds, 12c per bud and flower.

As the growing of Lilies is unprofitable, a certain amount of other plants must be taken.

**Hyacinths**, 4 best colors, King of the Blues, Grand Maitre (light blue) La Grandesse (best white), Gertrude (best pink), 4-in. pots, \$12.00 per 100.

**Asparagus Plumosus Nanus**, 3-in., \$5.00 per 100 2 1/2 in., 3c; 4 in., 10c.

**Cineraria Hyb. Grandiflora**, H.F. Michell's n.w. improved strain. Our plants of this strain are twice the size of those of other years, with perfect, large, green foliage. Some of the plants are almost as large as a bushel basket. 6 in. pots, 25c, 35c, 50c, 75c to \$1.00 each.

**Arcia Lutescens**, 5 in. pots, three plants in a pot, 35c.

**Cocos Weddelliana**, 3 in., 15c.

**C Ferns for Dishes**, \$3.00 per 100.

Have an Immense Stock of Easter Plants.

This is our catalogue. Please state if in or out of pots. All goods must travel at purchaser's risk only. Cash with order, please. No references will be investigated.

**GODFREY ASCHMANN**, 1012 W. Ontario St., Philadelphia, Pa.

Importer, Wholesale Grower and Shipper of Pot Plants.

SPRING "BOOK FOR FLORISTS!" ASK FOR IT.

## VAUGHAN'S SEED STORE,

NEW YORK.

All Plants f. o. b. Western Springs, Ill.

CHICAGO.

The new store of S. Hoffman in the business district is exceeding expectations. Trade has been brisk from the day of opening.

T. J. Welch of the Galvin Tremont street store has returned to his post fully recovered from his recent severe cold.

Wm. Aylward is handling an extensive variety of flowering plants in connection with his cut flowers.

Frank Edgar of Edgar Bros., is bringing in a fine lot of sweet peas from a new crop.

WAKEFIELD, MASS.—Otto B. Runge has opened a new store on Albion street.

PORTLAND, ORE.—Frederick E. Botje, of Mt. Tabor, died March 4, at his home, 31 East Sixty-first street, aged 49 years.

LA CROSSE, WIS.—The Florists' Association held its monthly meeting on Tuesday evening, March 8. The subject discussed was the growing of Easter lilies. A number of fine lilies were exhibited and the different varieties were fully discussed by the members and the methods of growing them to the best advantage. The next meeting will be held April 5 and the subjects to be discussed are "Roses in Pots" and the "Watering Pot."

# RED WING

THE BEST  
Geranium Novelty  
FOR 1910.

This new plant is a deep cardinal red, with a soft, velvety sheen, making it unusually attractive. It has a semi-double flower, of good substance, large trusses, very floriferous.

This plant is robust, of strong growth and makes an ideal pot plant or bedder, as it stands the sun well; has no rival in its wonderful color.

## Pittsburg.

The week started out rather slow, but by Thursday stock was moving out a little better and Saturday evening found the wholesalers cleaned up. The prices were anything but satisfactory. This is the first real clean up since the glut came on, so everybody is feeling pretty good. In all probability the market may hold pretty firm until after Easter. Funeral work played a role in this week's business as several very prominent men died, and everybody had all they could do.

### NOTES.

Geo. Benanvantano, Wilmerding, foiled the attempt of a robber to loot his store by knocking him down and taking his guns and \$500 taken from his safe. Benanvantano came into the store just in the nick of time, saving a clean cut get away. He did not prosecute the robber as he thought the beating was sufficient.

John James announces that he has extended his business and taken in a partner, a Mr. Butler, of New Kensington. They have bought the L. A. Neff greenhouses at Springdale, and intend to remodel the plant and grow stock for their New Kensington store.

B. Seidler, Braddock, opened his new store on Saturday at 712 Braddock avenue. Mr. Seidler was formerly with the Braddock Floral Co.

H. L. Blind & Bro., are showing a pretty window of flowering plants at their Fifth street store.

Arthur Langhans, Wheeling, W. Va., is moving from his present location to Chaplin street.

Geo. L. Huscroft, Steubenville, O., is back home after an extensive trip through the east.

Wm. Falconer and daughter have returned from their southern trip.

**JOHN H. SLOCOMBE,  
FLORIST,  
555 Townsend Ave.**

New Haven, Conn., March 7, 1910

Aphine Mfg. Co., Madison, N. J.

Gentlemen:—

After using your product for past three months find that it has effectively killed all the green and black fly on double and single violets in our houses—without injuring in the least the flowers or even tender center leaves. We sprayed our young sweet pea vines, which were badly infested with green fly, and that one application has cleaned out every aphid visible to date.

We have placed order for ten gallons Aphine with your local agents to keep on hand—as we cannot afford to be short should another crop of fly appear.

Yours truly,

J. H. SLOCOMBE.

See pages 416 and 422 for other Aphine endorsements.

John Orth, McKeesport, is going to put up two new greenhouses.

W. D. Faulk, Homestead, is going to move to new quarters May 1.

Julius Ludwig, Northside, has been sick.

J.

YONKERS, N. Y.—Philip Germond, son of a clergyman, was arrested for endeavoring to pass a forged check for \$10 on Gus Massus.

FLORAL PARK, N. Y.—Geo. B. Remsen, foreman of John Lewis Childs' packing room, committed suicide March 8 by hanging. He had been acting queerly since being struck by an automobile a year ago.

**Don't Get Left --- Last Call On  
Rooted Cuttings, April Delivery**

# Carnation Dorothy Gordon

has added to its laurels: At the Toronto show, just closed, a gold medal was awarded to this splendid carnation when exhibited in competition with others. Carnation Dorothy Gordon is a winner—a winner of prizes and a winner of profits, as our customers are learning. Some of its merits are: strong constitution—absolutely free from disease; wonderful productiveness—50% more flowers than Enchantress; good color—clear uniform pink; splendid form and keeping qualities—flowers last four and six days after cutting; and enormous size—averaging three inches in diameter. We know of no other variety possessing all these strong qualities. Order NOW some of the splendid stock we offer for April. Prices remain the same—\$10.00 per 100; \$75.00 per 1000—and you'll find, long before the season is over, that it was the best investment you made this year. If you want to investigate first, come to see us, or write for particulars—but don't delay, for the stock won't last.

Boulevard, WEST BROOKEN, N. J.

Montreal.

TRADE QUIET.

Business during the first couple of weeks of lent showed very little of decline, but these later weeks are felt quite severely. If it was not for the abundance of funeral orders, things could be called very quiet. Cut flowers are plentiful with the advance of brighter days and fine sunshine; bulbous stock is supplied in good quality and roses and carnations are fine and enough to supply the demand. The Easter plants promise to be a fine lot, notably the roses in all the varieties from the Baby Rambler with its clusters of small flowers to the stately hybrids with their large double heads. Hydrangeas are earlier than ever before this season and have been selling for weeks. Lilies, while first class with some growers, are a failure with others and case after case of bulbs showed a very small percentage of healthy plants. All around, the black stem Gigantemum is the most reliable one to grow.

The Gardeners' and Florists' Club had a very interesting meeting March 7, with the largest attendance on record. An interesting lecture was given by J. Hughes, a professional plumber; the subject was "Greenhouse Heating." The members followed the lecturer keenly all through, wandering at times far from the subject. A number of questions were asked at the conclusion, which were answered by Mr. Hughes to the satisfaction of the enquirers. After this Alec Wilkie read his paper on "Bulb Forcing," which provoked a lively discussion. A vote of condolence was tendered to the widow of our late member, A. Pinoteau, who died recently after less than a day's illness. Mr. Pinoteau was superintendent of parks. Born in France, he came to Canada with his parents while quite a young boy. He was employed in the parks department for some years. For a time he was assistant to his brother, Andrew Pinoteau, who died in August, 1908, and on the death of his brother he succeeded to the post. The deceased was 39 years of age, and

## EASTER PLANTS

AZALEAS, 5½ to 8-in. pots, from 75c. to \$5. each; larger plants from \$6.00 to \$10.00 each; Pyramids, \$4.00 to \$5.00 each.

LILIES, \$12.00 per 100 buds; \$120.00 per 1000, \$550.00 per 5000.

LILACS, White and Blue, 8 and 9-in. pots \$1.50, \$4.00, \$2.50 and \$3.00 each.

**S. D. BRANT,**

Clay Center, Kans.

is survived by a widow and three children.

A. C. Legare will build two houses, 25x100 feet each, for violets. The big lettuce house, 65x500 feet, at Camille Legare's has produced lettuce better and finer than he ever grew it before.

The Mount St. Bruno Floral Co. will also build this year, but are undecided yet as to size.

LUCK.

Tarrytown, N. Y.

The Horticultural Society held its regular monthly meeting, February 25. The subject of the meeting, "Roses," was introduced by Andrew McKendry. A very interesting and instructive discussion followed. The monthly prize was won by James Stuart with a splendid vase of Killarney. Mr. McKendry showed a grand vase of mixed varieties which was only a few points behind the first prize lot. A number of other vases were shown, the general quality of which was remarkably good. The subject for next meeting is "Forced Vegetables" and prizes will be given for the best three kinds.

# The Crego Aster

## THE BEST IN THE MARKET

With its enormous blossoms, long stems and vigorous, healthy plants, this Aster is becoming more valuable to the florist from year to year, and its remarkable success is due to the fact that it has had the benefit of twelve years of the most rigid and painstaking selection, every effort having been directed toward developing its commercial qualities—toward making it a money-maker for every florist who handles it. Growing no other seed of any kind, I am able to give this the closest possible attention.

This aster has proved itself to be exactly what every florist needs; an aster which finds instant favor with his customers, for which they are willing to pay the highest price, and which gives him the largest return for his time and labor. It costs the grower no more to produce flowers of that grade than to grow the common run of asters which sell for but little more than enough to pay express charges.

If you are interested in getting the highest possible returns from your aster crop next summer, I shall be pleased to hear from you at an early date.

I have plenty of white and shell pink, but the supply of rose pink is already very low. Orders for that shade should be sent at once.

Prices for this season: Trade pkt., \$1.00; half-oz., \$3.50; oz., \$6.00. A substantial reduction from last year.

**G. S. CREGO,** 562 East Alder St. Portland, Ore.

### Worcester, Mass.

There was a good attendance at the spring show of the Worcester County Horticultural Society in Horticultural Hall March 3. While it was not as large as other years the flowers and plants were of exceptionally good quality. H. F. A. Lange had a nice display of pot plants, acacias, genistas flowering plums, apples, rhododendrons and rambler roses. He took six firsts and two seconds. The awards were as follows: :

Cut Flowers.—H. F. A. Lange, first; L. C. Midgley, second.

Carnations.—L. C. Midgley, first; H. F. A. Lange, second.

Azalea Indica, one plant.—H. F. A. Lange, first; E. W. Breed, second.

Azalea Indica, three plants.—H. F. A. Lange, first; E. W. Breed, second.

Cineraria.—Allyne W. Hixon, first; L. C. Midgley, second; E. W. Breed, third.

Cyclamens, four plants.—H. F. A. Lange, first; E. W. Breed, second.

Cyclamen, one plant.—E. W. Breed, first; H. F. A. Lange, second.

Hyacinths.—H. F. A. Lange, first; E. W. Breed, second.

Primula Sinensis.—H. F. A. Lange, first; E. W. Breed, second; Allyne W. Hixon, third.

The Aitken flower store being closed

E. S. Bavier, the manager, is now with

H. F. A. Lange. Mr. Aitken, who

conducts a business in Springfield,

started this venture two years ago

but found it did not pay.

The H. F. A. Lange estate has

leased a large store in the heart of

the shopping district which they expect

to occupy about May 1. Mr.

Lange plans to have one of the finest

florist's stores in New England. R.

W. W. COLES, Kokomo, Ind.

Baltimore.

The promise of spring did not come to full fruition, for, quick as presto, another snowstorm, leaving four inches on the ground, changed the appearance and hopes of things vernal. This was followed by high winds, the very type of March violence and rawnip, unbearable to men, beasts and plants. There was some greater activity in the market last week and by night of Saturday there was a pretty thorough clearance of stock. Carnations are less in evidence, and prices hardened under increasing demands. Roses about supply calls. Violets were in heavy supply, and on one day the Florists' Exchange sold to one street vendor 16,000 at one clip. Bulbous stock is not much seen, efforts being made naturally to keep it back till next week. Callas are on hand by the thousand, with no outlet. The day of the calla seems over here. There is an extra call for white carnations, both for local trade and shipments, the suspicion being that they are to be dyed for St. Patrick's day, which this year is to be celebrated here with a revival of old-time energy and enthusiasm.

The Gardeners' Club has its annual meeting, election and banquet tonight. Eloquence and Wurtzberger will be on tap. Just whether the censorious critic of Philadelphia, who last year pointed out the incongruity of a gardeners' feast without flowers and decorations, will have cause for similar grumbling this year, remains to be seen. The officers elected for the next year cannot be ascertained in time for this week's notes.

The tree trimming in the parks will not down. Major Richard M. Venable, who was president of the park board himself for several years, and who is of great local repute as a lawyer, wit and after-dinner speaker, and a man of common sense as well as learning, has had something to say on the subject. It is pertinent to these columns. Speaking of the "eminent citizens," who were referred to in these notes last week as having petitioned the board against tree pruning, he says: "A careful reading of the list of petitioners, with some knowledge of their antecedents and training, leads me to the conclusion that they know about as much about tree trimming as I do—which is nothing." This is frankness and quite in contrast with the position of General Latrobe, now president of the board. Major Venable adds: "I have

# CONQUEST

LIGHT PINK,  
Overlaid with  
DEEP ROSE.

The most beautiful and attractive, as well as one of the most valuable Carnations in the market today. The blooms sell for 2 to 3 cents more than any other variety in the Chicago market. Why? Because everybody is deeply impressed with its beautiful large flowers on long strong stems the moment they see it, and will not leave your place without taking some of them along. Not only a novelty but a Carnation that can be used in most any way. The plants have an ideal habit, early, free and continuous, therefore you cannot make a mistake by growing Conquest, the best of them all.

Rooted cuttings, strong, well rooted, \$12.00 per 100; \$100.00 per 1000.

Chicago Carnation Co., A. T. PYFER, Joliet, Ill.  
Manager.

New Crop Early Flowering Single Chrysanthemum Seed

and Gold Medal Pentstemons

at 25c and \$1.00 per package.

CHARLES H. TOTTY, Madison, N. J.

**JUANITA, (Wah-nee-ta)** A grand scarlet Carnation, with about a 3½-inch flower, well built up with a two foot stem.

**Its Strong Points Are:** Abundance of large, high grade flowers at all times; stem very stiff, with good habit in every way; keeping qualities are wonderful; burst blooms are rare. We have grown it 6 years and will still grow as many as we have now. We have never over propagated it, so its vitality is not impaired. Cuttings will be taken from flower stems which are the best. The color is so bright and rich it takes with every one. We have a very large stock. **Price:** Rooted cuttings \$3.00 per 100; \$60.00 per 1000. Special price in large lots. Unrooted stock half price. A discount of 5% for cash.

THE FILLow FLOWER COMPANY,

Westport, Conn.

learned one lesson as I have walked through the wilderness of this world, which they have not learned, and that is that in a matter of expert knowledge we must consult an expert."

S. B.

Greenville, Mich.

The Greenville Floral Co. is turning about 26,000 feet of glass that has been used for lettuce growing over to cut flower growing and this gives the company seven houses of roses, planted principally to Richmond, Killarney and Bride. Asparagus plumosus has one large house devoted to it; in five carnations are grown and there are three houses for chrysanthemum growing, followed by sweet peas. Bedding plant stock has considerable space devoted to it and when the rearrangement of the houses is complete there will be a fine up-to-date plant.

TRAVELER.

J. D. THOMPSON CARNATION CO., JOLIET, ILL.

TRENTON, Mo.—The Trenton Floral Co. is reported dissolved and L. A. Worder, the president, has gone to St. Louis. The firm's capital was reported at \$3,000.

# Florists' Mums

**T**HE most serviceable kinds for the Florist are those which produce perfect flowers from stock planted in June and July. We grow this kind in large quantity including the best Singles, Pompons and Anemones for sprays.

Size is the chief feature at the Exhibition but is not the prime factor for those who wish blooms that can be sold at a profit.

We also have a full quota of the Exhibition sorts. Write us stating how many of each color of the Early, Midseason and Late you desire.

Our experience is at your disposal. We can supply plants from pots or rooted cuttings.

Catalogue Free on Application.

## Orchids..

We have changed our domicile from Secaucus, N. J., to Mamaroneck, N. Y. We are largest collectors and importers of Orchids and are now booking orders for all the commercial Cattleyas for delivery next spring

**CARRILLO & BALDWIN, Mamaroneck, N. Y.**

**New Orleans.**

Business for the past week, while not altogether dull, has been a little spasmodic, but not so much as might be expected on the eve of Easter. Society events are rather small and informal, but call for the best grade of stock. Orchids have been popular the last 10 days and the local supply has been good. The outlook for lilies is rather gloomy, they being either a week early or a week late. It is a hard matter to time them here, but it is easier to force them at the finish than retard them. A. Allost is one of the fortunate growers to have them in right shape. Business at the plant market is brisk and tree planting is not quite over.

B. M. Wichers, of Gretna has a novelty in water hyacinths. The leaves instead of the usual type, resemble very much the fronds of Pteris serrulata. It reproduces itself from tiny plants which form on the old leaves and then drop on the water. Not one out of many thousands has showed signs of going back to type.

## Orchids! Orchids!!

**Of all Kinds and for all Purposes.**

The following freshly imported orchids have arrived in good shape: **Cattleya Warnerii** and **C. labiata**. Due in a few days **C. Mossiae**, others to follow in rapid succession.

FRANK BANNING, Kinsman, Ohio.  
Originator of America and Niagara.

Yonkers, N. Y.

The first annual dinner of the Horticultural Society was held at Park Hill inn on Thursday evening, March 10, and was voted by all as the best ever. About 100 members and their friends from New York, Long Island and other places were present. The dining room was very tastefully decorated and much thanks is due W. H. Waite for the plants used in decorating, also W. Macdonald for arranging the same. All the speakers took occasion to warmly compliment the society on the excellent showing it has made since its start two months ago. They also expressed the hope that success will attend the society in its efforts to hold a show in the fall.

A. T. Boddington, the well known seedsman, presided as toastmaster and his remarks when introducing the speakers were both snappy and humorous. The first speaker was President Bennet, who responded to the toast "The Yonkers Horticultural Society." He gave a brief outline of the work accomplished since the society was formed in January and prophesied great things for the future; he said there was now a membership of 80. Mayor Lennon was the next speaker and congratulated the society on its excellent showing and, on behalf of the city, offered assistance at the show to be held in the fall.

The other speakers and their subjects were as follows: "Kindred Societies," H. A. Bunyard, "The Private Gardener," J. Mooney, "The Nurserymen," J. Scott, "The Visitors," Harry P. Turner, of Castle Gould, "The Seedsmen," Albert Rickards, New York, "The Florists," Louis Melliot, "The Ladies," J. A. Shaw, "The Horticultural Press," J. Pepper. The entertainment was furnished by The Rickards brothers' comic and sentimental songs, James Anderson's baritone solos, and W. H. Waite's tenor solos. The committee in charge of the dinner consisted of W. H. Waite, Hamilton Scott and Peter Macdonald, and much thanks is due them for the very successful way in which the dinner and entertainment was carried out.

L. W.

Lenox, Mass.

The regular meeting of The Horticultural Society was held March 5. President G. Foulsham in the chair, and was largely attended, being full of interest from start to finish. The following were unanimously elected active members of the society, Alfred H. Diprose, Rochester, N. Y.; Joseph Manda, West Orange, N. J.; and L. E. Stickles. The schedule for the year was adopted as read, and the following exhibitions will be held: Annuals and perennials, July 27; fall show, October 26-27; In addition to the society's money prizes for the later show, three silver cups have already

**HENRY EICHHOLZ,** Waynesboro, Pa.

Orange, N. J.

The regular monthly meeting of the New Jersey Floricultural Society was held March 11, at its rooms. The exhibition of flowers, the first in a series of contests for 12 silver cups, consisted largely of orchids. That of Lager & Hurrell of Summit, was staged with the taste and harmony now expected of this firm and was under the charge of George W. Strange. Of chief interest were *Cypripedium* *Orion*, *Phalaenopsis* *Stuartiana* and *Epiphronitis* *Veitchii*. Joseph A. Manda displayed *Cattleya speciosissima*, *intermedia*, *superba* and *amethystoglossa*, *Odontoglossum* *Rossi majus*, *Miltonia cuneata* and *Ansella lutea*, all specimen plants of large size and beauty. There were numerous contributions of the season's flowers from the nearby estates. The Rev. Lewis H. Lightipe read a paper upon "Our Native Orchids," illustrated by 50 mounted specimens from his own herbarium. He gave a list of these with description of their habitats. A spirited discussion took place upon the schedule offered for the season, particularly the orchid class. There are seven classes in the schedule.

J. B. D.

LA CROSSE, WIS.—At a meeting of the Florists' Association, March 8, the culture of the Easter lily, details of storing and other points, were discussed. President J. S. Medary presided and Messrs. Theo. Kienahs, Arthur Zoellner and C. E. Schaefer entered into the discussion.

Satisfaction guaranteed or money back;  
why try cheap substitutes that makers do  
not dare to guarantee?  
THE H. A. STOOTHOFF CO., MOUNT VERNON, N. Y.

Kalamazoo, Mich.

At the greenhouses of G. Van Bochove & Bro. everything is well on time for Easter and a heavy trade is reported. Messrs. Van Bochove say, in substance, that the past year has been the best in the history of the firm. The houses devoted to carnations and roses are in especially good order while all the popular Easter pot plants are good, well flowered and timed to the minute. Four new houses, each 27 x 300 feet, are to be built this year, making a total of 150,000 square feet in all. This increase has been decided on owing to the ex-

## Ammoniated Lawn Lime

Kills Weeds.

Makes Grass Grow.

Applied as a light top dressing to lawns it kills all flat leaved weeds such as Dandelion, Daisy, Plantain, Sorrel, Chickweed, Moss, etc., in 48 hours and without other fertilizer produces a wonderful, luxuriant, rich, green growth of lawn grass—which is distinctly noticeable 50 feet away.

The use of Ammoniated Lawn Lime supersedes hand weeding of lawns, putting greens, etc. It saves the grass from being pulled up and in many cases ruined. Grasses take a new vigorous growth, avoiding probable trouble in the future.

Quantities:

If very weedy 1-lb. to 40 square feet, 25-lbs to 1000 square feet, (20x50). Half to one-quarter amount if moderately weedy.

ABSOLUTELY GUARANTEED.

Money refunded if not satisfactory.

We want Seedsmen or Florists as agents and distributors in every important city and town.

Retail Prices:

2-lb. cans, 25c, 50 cans per case. 5-lb. cans 50c, 20 cans per case. Bags, 25-lbs. \$2.00; 50-lbs. \$3.50; 100-lbs. \$6.00; 1000-lbs. and over 5c per lb.

Descriptive Circular and Wholesale Prices on Request.

DEPARTMENT OF PARKS,

City of New York,

Boroughs of Brooklyn and Queens.

Borough of Brooklyn, March 7, 1910

To the Aphine Manufacturing Co.,

Madison, New Jersey.

Dear Sirs:—

Having received your sample of Aphine, I at once made a test for mealy bug on coleus and crotons and the effect was marvelous; the mealy bug dried up without any damage to the plants. Have since purchased four gallons of Aphine and used the same according to directions, with spray, on green and white fly, also scale on palms, with the same success. I am more than pleased at the results of your insecticide, and will continue its use, as it is safe, sure and reliable, and can honestly recommend it to all my brother craftsmen.

Very respectfully yours,

EDWARD J. WALTERS,

Head Gardener, Forest Park Greenhouse and Nursery.

See Pages 402 and 422 for other Aphine endorsements.

## The "Meyer Green Silkaline"

is the only Green Thread that should be used by florists and growers. It is guaranteed full weight and full measure.

Also Violet Thread for tying up Violets. Price of both, \$1.25 per lb. express or freight paid in good sized orders.

JOHN C. MEYER & CO., 1449 Middlesex St., Lowell, Mass.

cellent trade enjoyed the last four years. Among the pot plants we noted as especially good were cinerarias, pot lilies, primulas and all the popular tulips and other bulb stock.

TRAVELER.

JOLIET, ILL.—Albert C. Rott is again superintendent of the floricultural portion of the Will County agricultural show and is working hard among local florists to make his end of it a success.

# Does Your Heating System Operate As It Should? ~~

A good steam trap saves its cost in a short time and it saves you worry and trouble.

## Why not put It in Shape?

### STRATTON'S GREENHOUSE,

C. D. Stratton, Prop.

Lancaster, Wis., Feb. 28, 1910.

Aphine Mfg. Co., Madison, N. J.

Gentlemen:—

The "Aphine" purchased through your agents, of Chicago, is certainly O. K. I have had success with it both as a spray and as a dip. Have dipped plants in full bloom, such as primulas, cinerarias, roses, etc., with no apparent ill effects on the plants or blooms, but with death to the bugs.

Would like to ask if you would consider it safe to use on edible vegetables such as cabbage, cauliflower, lettuce, etc.?

There ought to be a large sale of "Aphine" when the people become acquainted with it and can be sure of obtaining the results claimed.

Yours very truly,

C. D. STRATTON.

See Pages 402 and 416 for other Aphine endorsements.

## The Mastin Automatic Whitewash and Spraying Machine Is Reliable, Practical and Durable

The tank is made of galvanized sheet steel, and in brass. The pump is of brass throughout, simple and powerful. The mixing device keeps the contents of the tank well stirred up from start to finish.

When the machine is filled to within six inches of the top, a few strokes of the pump will compress enough air in the tank to produce a continuous mist-like spray for 15 minutes.

All parts are made to gauge and may be had for repairs.

Ask your dealer about our **Extension Hose, Extension Rods,** and the **Mastin Whitewash Nozzle** for Bordeaux mixture.

Sold through Seedsmen, Dealers in Florists' and Poultry Supplies.

## TALKS TO THE CUSTOMERS

W. N. Rudd has written a series of seasonable articles for the National Council of Horticulture press service, which are so full of practical suggestion for those numerous florists, seedsmen and nurserymen who have to deal personally with many of their customers at this season of the year that we print them in full herewith, so that none of our readers may miss them. Employers will find this excellent material for their assistants and clerks. Every employee who comes in contact with customers should be familiar with the facts here set forth.

### Placing Shrubs and Flowers in the Yard.

Many people study the nursery, seed and florist catalogues long and faithfully, make a careful selection of what seems to them good, but fail to consider where these beautiful things are to go. The shrubs arrive, the seeds are ready and the florist comes with the plants. They must be got into the ground quickly, nothing has been thought out, no plans made, and the result is that half the beauty of the results is lost for lack of a little study. Where to plant is just as important as what to plant—often more so. And yet we study the "what" carefully and forget all about the "where." Never plant shrubs, flowers or anything else in the center of the lawn. Plant them anywhere else, but never there. It dwarfs the place and spoils all artistic effect.

The place where the house foundation meets the lawn is a harsh, ugly line. We must plant something around the house close to the foundation. The view under the front porch is not pleasing, so we must plant something to hide it. The weekly wash and other things seen in the back yard do not fill the soul with esthetic joy. Therefore, we must plant a screen from the back of the house to the fence on each side. The division fences are ugly, so we must plant something along them to, at least partially, hide them. Square corners are not pleasing, so we must plant in the corners to round them off. Plants are dead during seven months of the year; shrubs partially conceal and have pleasing forms even in winter, so we must use shrubs for this planting. If there is anything ugly or unsightly which cannot be got rid of, plant it out with shrubs.

Now about flowers—we must have flowers. Plant all you can afford to

pay for if you are prepared to take care of them. If you do not wish the trouble of caring for them, don't plant them. Starved, sick and discontented flowers cry out for help to every passerby. Cruelty to flowers should be made a criminal offense. It is almost as bad to abuse a beautiful flowering plant as to beat a horse. Don't plant in round beds. Plant in long beds in front of the shrubbery where the flowers can have the background of green foliage. Plant the big tall fellows and the brilliant colored ones at the back, the cannas, the hollyhocks and the like. Take that big ugly canna bed out of the lawn and string the cannas out, two or three plants deep, in the front of the tall shrubbery way back in the yard. Plant the smaller and more delicate ones near the front. Plant some sweet scented ones near the porch and near the windows of the living room. Plant little triangular beds in the sharp corners of the walks unless rose bushes are already planted there. In short, know just where you are going to plant each thing before you get it; and above all, don't put clashing colors together.

### Plants and the Soil They Like.

There is almost no soil so poor that it cannot be made to grow flowers, vegetables, shrubs and trees well, if properly treated. Successful cultivation demands two things—a good mechanical condition of the soil, and richness. The first is equally as important, or more so, than the last, and is more difficult to secure. Given a soil in good mechanical condition, it is simply necessary to work in the proper amount of well-decayed manure at planting time.

Never dig fresh manure into the ground, just before planting. If there is none which is well rotted at com-

mand, then spread the fresh article thinly on top of the ground, between the rows and between the plants, and allow the rains to wash it in gradually. If the soil has been cultivated before and has plenty of decayed vegetable matter in it, excellent results may be had with artificial fertilizer bought from the florist or seedsman. Bone is good, but is not a complete fertilizer. Wood ashes should be used with caution, as the large amount of lime they contain may do mischief. The best is what is called a complete fertilizer. Ask the man you buy of how to use it, and never use more than he advises. A very light sprinkling over the soil after spading or ploughing and then raked in, is best. Such things are very strong and will injure or kill plants if used in excess.

Well rotted manure is best and safest. Every garden should have its compost heap, where the material is piled up to decay. Turn it over occasionally. If it smokes or steams, turn it over at once, and wet it, when turning, with the hose. Slow decay is what is wanted, not hot fermentation. A good compost heap is the gardeners' most precious possession. If the soil is a heavy, stiff clay or hard pan, then patience and perseverance are needed. Break it up two spades deep if your back is strong, if not, subsidize a laborer who has a strong back and who knows how. Work into the ground at the same time all the fresh horse manure you can. Leave the ground rough and let the manure rot. The rotting of the manure, both mechanically and chemically, helps break up and fine the soil. After the manure has rotted spade it over again and, if in reasonably fine condition, planting may be done. If not, repeat the process. In some very obstinate soils it may be necessary, in addition, to let the ground lie rough over winter for the frost to work on. Frost is a great pulverizer of clay soils when they are spaded or ploughed up roughly. Never work a clay soil when wet or sticky.

Some plants, like Golden Glow rudbeckia and nasturtiums do best in a light soil without any manure. Roses like a clay soil, and it is hardly possible to give them too much manure, provided it is not too close to the roots when first planted. One can hardly grow most kinds of roses successfully in a light, sandy soil. Geraniums will grow in any soil, but must have only a moderate amount of manure, and not too much water. Pansies like the richest kind of a light, loamy soil. Most shrubs like a moderately rich soil with yearly applications of manure on top of the ground over the roots. Cannas like the richest possible kind of soil with abundance of water after they start to grow.

Many plants will not do well two years in succession in the same place, but we do not know exactly why. This is especially true of sweet peas and asters. It is more or less true of all plants. This is why the farmer "rotates his crops," and why we should, if we can avoid it, never plant the same variety in the same place oftener than once in three years. With the best of soil, properly fertilized, and in the best mechanical condition, we must still see that the plants are properly and firmly set in the ground and are

properly and regularly cultivated. Remember that we cultivate, not so much to kill weeds, though that is essential, as to keep the upper layer of soil loose. Don't water too much, and always hoe the next day after watering. Most amateurs water too much, and hoe too little. The hoe is better than the hose.

#### **Danger in Planting the Garden too Early.**

When the birds come, the grass turns green and the first few days arrive in which the amateur gardener can go coatless, the lust for digging and planting comes to us all. The digging is all right; dig as much and as deeply as can be done, provided the ground is not wet and soggy. Dig in the manure, lots of it, but be sure it is well rotted; raw green manure is poison to plants. If the spring fever is still in the bones, if the fingers still tingle for the feel of the garden tools, dig it all over again. No garden ever was dug too often or too deep. No garden soil was ever too finely pulverized by the spade of its owner. Digging makes the garden glad and a glad garden gives fine crops later on.

But beware of planting too early. When in doubt dig, don't plant. It is a mistake to plant seeds or set out plants in a wet, cold soil. With few exceptions they won't grow. They will at best lie dormant; more often the cold and the wet kill the tender germs and the seed and the labor of planting it is lost, while the crop is delayed waiting for the growth which never comes. No seed should be planted until the ground

is reasonably dry, that is, not wet and sticky. When this condition prevails put in the first sowing of the hardy seeds, radishes, lettuce, onions, spinach, early round smooth peas (if one must have them—the wrinkled ones are a world better) and the like in vegetables, pansies, daisies, sweet peas and nasturtiums among the flowers, although pansies should have been started some weeks earlier in the house, or, better still, good plants should be bought from the florist and set out at once. It is to be noted that the little pansy plants are the best. They will grow better and bloom better and longer than the big fat ones which have been carried over from last fall.

A week or 10 days later, if the weather holds good, the wrinkled peas, beets and other seeds may be planted. Again, a week later, a planting of early sweet corn (Golden Bantam is the best) may be tried, although it is a little risky, still. By May 20 most seeds can be planted and most bedding plants can be set out. Corn, melons, cucumbers, geraniums, asters, lobelia and all except the most tender things are reasonably safe. Coleus and very tender plants should not be set out until early June, and while bush beans may be planted in late May, the limas should not be put in the ground until June 1. For the extreme northern states those dates are too early while as the Ohio river line is approached the dates are late.

BASKET OF EASTER LILIES AND WHITE HYACINTHS.

By Andrew McAdams, Chicago.

EASTER BASKET BY ANDREW McADAMS, CHICAGO.

Hyacinths, Crotons and Ferns.

### Where Roses Will Grow Well.

Success with roses depends on three things—climate, soil and location in the yard. The last two we can control more or less, but the question of climate can only be met by selecting such varieties as will succeed, and making up one's mind to do without the many beautiful varieties which will grow well only in favored localities.

As one approaches and goes south of the Ohio river line, nearly all roses do well, and even the tender tea roses will winter with slight protection. Farther north, in northern Illinois, Iowa, Wisconsin, northern New York and similar latitudes, we have the hot burning sun of summer, long droughts in midsummer, severe cold in winter with little snow, and sudden and severe changes of temperature at all times. These conditions, of course, are modified by the lake influence on the east shore of Lake Michigan and south of Lake Erie and Ontario, but in general they prevail, and are very unfavorable to the growth of all but the hardier roses. Of course, careful protection will winter over many kinds which would otherwise be killed outright; but, unless one is an enthusiast and willing to assume much extra work, the uncertain varieties are best left alone. Some of the smaller varieties can also be made to do very nicely if florist plants are obtained from the florist and set out annually and treated as one treats geraniums and other summer bedding plants. There is little use in trying to dig them up in the fall and keep them through the winter indoors. New plants should be bought each year. For permanent

planting the tea roses will not do, and most of the hybrid perpetuals, while listed in the catalogues as hardy, are not to be relied on.

The rose of roses for outdoor planting in the north is the Japanese rose (*Rosa rugosa*) and its hybrids. We are getting new varieties every year and will soon have a list of these which in color, form and variety, will supply our wants. The original form and several of the hybrids are as hardy as an oak tree. The Rambler roses, such as Crimson Rambler, Dorothy Perkins and the like, are desirable, although occasionally killing back in severe winters. The polyantha roses like Clothilde Soupert, and the baby ramblers are very hardy, as are some of the moss roses and the old-fashioned climbing and garden roses.

In soil, the rose prefers a clay or heavy loam. In fact it is almost useless to try to grow roses in a very sandy or gravelly soil unless mixed with clay. The rose is a gross feeder and requires a rich soil. This can be given if well rotted manure is at hand, or, if the manure is not rotted, it can be used on top of the ground. Never dig fresh manure into the ground where roses are to be planted.

One of the great causes of failure with roses is planting them in the wrong place in the yard. Roses must have full exposure to the sun or failure is sure. They must not be overshadowed by the branches of trees or shrubs, and must not be robbed of nourishment and moisture by tree or shrub roots. Trees, especially willows, box elders and poplars, will send their roots a long way to get into the rich, moist soil of a rose bed. Roses will

do well on the south side of a house and even on the east and west sides, but the rubbish from the building generally buried near the foundation makes it necessary to dig deeply when planting, while the building often prevents their getting a proper amount of water from the rains so that it is necessary to watch and water thoroughly at times.

READING, PA.—John Nolan gave a lecture at the Academy of music, March 14 on the bareness and ugliness of the town, urging more parks, boulevards and home planting. He was accorded a very enthusiastic reception.

CHARLOTTE, N. C.—The Chadwick-Hoskins Co. recently placed an order with the Misses Boyd for 1,700 chrysanthemum plants which will be given to the operatives in the various mill settlements of the company to beautify the yards and flower gardens.

DUNKIRK, N. Y.—Alfred Lindberg, employed as a salesman by the Lake Shore Seed Co., fell into an elevator shaft March 14, to the basement of the building 30 feet below. His worst injury was a long, deep gash over the eye which required five stitches to close.

WASHINGTON, D. C.—Fire destroyed a heating plant and burned away the ends of three greenhouses belonging to Michael J. McCabe, Walker road, March 14. The loss is estimated at between \$2,000 and \$3,000, and is not covered by insurance. It is believed the blaze was caused by the heating plant becoming overheated and setting fire to the woodwork.

## THE RETAIL TRADE

### Another St. Patrick's Day Window.

The scene of the picture herewith, a window display put up by the Idle Hour Nurseries, Macon, Ga., is laid around Killarney lakes. A mirror, is used for the lake, the yacht is made from one flat piece of wood for the bottom with one upright piece in center and one for the top, shaped exactly like a boat. Then the frame is mossed inside the wood work. Green carnations are used for the body of the yacht, and sails made out of linen with the word "Shamrock" in green letters. The boat is then filled with Irish potatoes, a card displays the words, "A cargo from the ould country." There is a rugged road twining itself around the lake, gravel is used for this, and real rocks are used everywhere in the landscape, as also is cork bark, and green wood moss employed for the pasture; in the distance is seen an Irish home with an old well and moss-covered bucket, and the usual wooden bench is seen on the left. Miniature lights are used for the lighting effect at night. On the right is noticed St. Patrick's church, with steps leading from the road up to the church, and the church is lit by green electric lights. Snakes are just creeping out of the crevices of the rocks and also on the lake shore, being driven out by St. Patrick. Rocks and sand placed around the edge of the lake with a few small sticks to represent logs add a great deal to the scene.

All along the road side are green stakes with electric lights to represent street lamps; at the side is a break in the roads, one goes at the back of the rocks and the other crosses and goes at the back of the church, and twines past the cottage, where you see two hogs are feeding in the pasture. The background is a large map of Ireland made on stiff paper and outlined with green paint, the towns are also written in green with the Irish sea on the right of the map. It is a typical Irish scene worthy of comment. Shamrock plants were used in the landscape. The yacht was sent to the Robert Emmet club after the window display.

### Suggestions for Easter Decoration.

For altar decoration a trellis made of green ribbon, at the intersections of which small bunches of lily of the valley should be tied with baby ribbon giving the effect of a flat shower, is satisfactory. Intermingled, there should be garlands of dainty asparagus at the lower edge of each trellis and at the end of each ribbon forming this flower mantel should be tied a loose arrangement of stephanotis or stevia intermingled with lily of the valley.

This same trellis arrangement can be used where an elaborate buffet dinner decoration is desired, using it as a scarf extending over the corners of the table, or as an extended centerpiece continuing to the corners. The centerpiece and flowers for the center table decoration give opportunity for rich and delicate color effects and novelty in arrangement. A handsome

silver plate as the central base for a silver loving cup or for a vase or bowl filled with roses, a silver or porcelain jardiniere filled with growing ferns, a pewter bowl of field daisies or four slender crystal vases of graceful carnations are the conventional decoration for the home.

The delicate beauty of a spray of roses in a small gray green Wedgewood vase, of china pink carnations in a grey blue Wedgewood pitcher, of a spray of cyclamen and maidenhair fern in a green and white stem-like vase or the effect of putting orchids and stevia together in contrast with a flaming mass of scarlet geraniums in a copper bowl, are all artistic possibilities. Foliage, fruits and flowers make an artistic and harmonious whole, and rustic simplicity is artistically obtained by Asparagus plumosus rising from a birch bark cylinder. Flowers which have a heavy tropical fragrance should be avoided; the best material is roses, pinks, and violets. Lilacs are always suitable and delightfully effective and lend to many color combinations.

A pretty Easter table decoration consists of a low centerpiece of pale pink hyacinths arranged on a bed of asparagus and, for a table of six or more, full single strings of asparagus should divide the guests, the fronds extending over the edge of the table, where a small loose bunch of pink hyacinths should be attached in various places to the extending garland. Mignonette can be used to good advantage in connection with the underlying decoration of this centerpiece.

Candelabra at each end of the table should have violet shades and, attached to the base of the candelabra, should be the souvenirs for the guests, viz.: bunches of violets arranged in a loose artistic manner tied with wide green gauze ribbon so arranged as to form a background for the violets—or to fall on the cloth in a circle around the base of the candelabra. A fine green finishes the centerpiece, the whole making an effective and inexpensive table decoration. At each plate should be a card with the name of the guest on it in a frame made of the African violet.

A. E. KLUNDER.

### March Flowers in the New York Stores.

Roses and carnations are now at their best. While we may yet see much good stock, a few weeks of mild weather with warm nights may be expected to deteriorate the quality of carnations. Special American Beauties are more plentiful than they were two weeks ago but there is no surplus of good blooms. The supply is increasing and by Easter we may expect an abundant supply. There is an abundance of the short stock but it is not generally handled by the retailers.

Killarney, White Killarney, Chateaufort, Richmond, Bride and Bridesmaid are all good. There are also good blooms of My Maryland to be seen. We venture to state that the above mentioned varieties include 99 per cent of all the rose stock that is

ANOTHER ST. PATRICK'S DAY WINDOW.

By H. G. Evans, of the Idle Hour Nurseries, Macon, Ga.

A suitable decoration for the March luncheon is the modest African violet. The centerpiece should be an oblong flat basket filled with African violets arranged in the following manner: Take a stout wire and, at the end, cluster (loosely) say a dozen violets; encircle these with asparagus vine forming in other words a little individual bouquet—fill the centerpiece with this arrangement. Lily of the valley will lend a pretty variation where contrast is desired.

handled in this city. Sunrise may frequently be seen, as a novelty, but it is not and never will be a staple stock. Its stems are too short and it does not appeal to the flower-buying public for general use.

We have recently had a rose show in this city and a matter-of-fact retailer has delivered himself in an original way regarding shows. He said: "These shows are a nuisance. They are free and the public flocks to them, then they come into our

LILIES AT POEHLMANN BROS. CO.'S, MORTON GROVE, ILL., TEN DAYS BEFORE EASTER.

stores and expect to find the same kind of stock that they saw at the show." While this incident is not mentioned to in any way disparage the exhibitions, which undoubtedly go far toward popularizing flowers, it shows the viewpoint of men who are merely after the dollars and cents and who see no beauty in anything that does not carry a percentage of profit.

Killarney rose is far in the lead. Getting at the facts, this is not so much on account of its popularity with the public. It is largely due to the growers, who find it more profitable than Bride and Bridesmaid. Many of the buyers in retail stores do not know the difference between Killarney and Bridesmaid or between Bride and White Killarney. They simply ask for pink or white roses. As a sidelight, a leading retailer recently said: "We must always have on hand some Brides and Bridesmaids, because there are a few people who ask for them and know them when they see them." As a red rose, Richmond has practically eliminated all the others.

The carnations Alma Ward and Mrs. C. W. Ward are very fine and popular, and so is Enchantress and its sports. While, as Adolph Farenwald puts it, the rose may be the brightest of flowers, there is now and

always will be, a great demand for carnations. They are decidedly the flowers for the plain people of whom Lincoln said, "God must have loved, because he made so many of them." While there is an abundant supply of double violets, many of them are of a miserably poor quality and as it is now the fashion to use orchids, gardenias, lily of the valley and sweet peas in corsage bouquets of violets it goes far toward pushing them. The single violets are increasing in popularity and we warn the growers that, as between a poor double and a good single violet, the choice is quickly made in favor of the latter. There is a steady demand for orchids, and many fine blooms, largely of cattleyas, may be seen. Unlike roses and carnations, there is from year to year, little improvement in the quality of these flowers, but their beauty and utility is always appreciated and they are here to stay.

◆ There is a constant increase in the popularity of good gardenias. Flowers with stems a foot long are no longer novelties and such blooms are in constant demand. Some of us can remember a time when Easter lilies were seldom seen except at Easter. We now have them all the year. Though there has been some talk of a scarcity of good pot plants, there is now an abundance of cut stock

on the market and considering the wide area from which this city draws its supply there is little likelihood of a dearth. Lily of the valley is plentiful and, considering past conditions, it is cheap, but that is inevitable. We have never taken much stock in the artificial flower scare but, considering the great increase in the supply of natural flowers, it would seem that the days of high prices for all stocks will soon be in the dim past. There is an abundance of what may be termed the minor stocks, including sweet peas, daisies, snapdragons and cut primroses, and they are found in the stores. The forsythias, flowering cherries, almonds and other spring stocks are seen in profusion and as decorative features they fill a large space. Of what is generally termed bulb stock, omitting lilies, the tulips seem to be the most popular. By some of the leading retailers, narcissus has come to be considered more of a nuisance than otherwise. In the years when other stocks were scarce it was useful but its popularity is waning and many growers can save time and money by noting this fact. While the Easter stocks of plants are not yet in, many fine plants are to found in the retail stores. These include azaleas, rhododendrons and different varieties of pot roses. Hyacinths, lily of the

valley and other small stocks may also be seen, attractively arranged in pans and baskets.

#### NOTES.

Chas. Thorley, who has original ideas, had recently a great display in his show windows of wicker hamper. Each hamper showed a fine bouquet. Some were of Killarney, White Killarney and Sunrise and moss roses, all being tied with ribbon of appropriate shade. Corsage bouquets displayed in glass boxes were other novelties. In the store, the leading feature was a large combination of fine pot roses and other flowering plants. Mr. Thorley predicts good Easter business.

At Geo. M. Stumpp's preparations are being made for a heavy trade in Easter plants. A feature at this store is a large plant of yellow jasmine which has for the past month been showing an abundance of bloom. In a city as large as this where there are so many skilful men in the business, it is impossible to mention all the good things that are to be seen in the retail stores. Each and all of the dealers, to the best of their ability, display the stock that appeals to their particular line of customers.

#### Easter Preparations in Chicago.

If Chicago retailers do not do a record-breaking business at Easter it will not be for want of preparation, for all the principal stores are well decorated and fine stock in all varieties is well displayed. With regard to novelties there is nothing much new to chronicle though there are new shapes in baskets and fine ribbons in all imaginable shades to "dress" the excellent pot stock that is coming to the market. Plants include the usual Easter offerings. Hydrangeas are not very plentiful or as forward as usual, the date being too early for these plants. Azaleas are at their brightest and best, the few bright days having brought them out but not overdone them. Cyclamens are unusually good for Easter and primulas are in fine shape, while there are the usual small flowering and foliage plants in plenty for baskets.

The George Wittbold Co. has a fine stock of baskets in many novel shades and we specially noted the ivory and green colored ones which are remarkably good. Some Pompeian ware here too is excellent. It is imported from Italy and other European countries and is an exact reproduction of the genuine article. It is high priced but very fine. Other fine things are the willow and gold braid baskets. The plant and cut flower stock is very showy and good here and advance orders for the festival are heavy. Canger & Gormley are preparing fine baskets and other receptacles for their trade. Some of the light green and yellow ones are very beautiful and when well filled make a most artistic and beautiful Easter gift. Bulbous stock, azaleas, Easter lilies and other plants are shown in great variety, suitably decorated.

Harry Rowe, as usual, has some very tasty baskets and his plants are exceptionally good. Cyclamens are far better than usually seen at

Easter while his *Primula obconica*, azaleas, hydrangeas, Easter lilies, rambler roses and others are in fine order. We noted a very good thing here in the way of a jardiniere and pot combined, the pot slipping in closely in the jardiniere case. These are easy to handle, as they can be filled and slipped in when ready without soiling the jardiniere. Grass baskets in pretty light colors were also noted. August Lange reports that his trade at Easter runs along about the same lines as at other times though the bulk of it, of course, is greatly increased.

John Mangel's store is extremely attractive. He has large plants of azaleas in the Monroe street windows, some big specimens of Apollo being especially good and profusely flowered. We also noted some of the most magnificent Keizerskroon tulips we have ever seen, great massive flowers of remarkably good color and substance. The pot stock of Easter lilies is good here and there are also fine foliage plants. Outside in Wabash avenue is a dwarf box hedge and he is also showing fine *Aucuba Japonica*, both the male and female forms. The Bohannon Floral Co. is showing extremely artistic baskets of bulb stock and other flowers and the taste and skill with which they are arranged are very creditable to this rapidly rising firm. Circular letters sent out to customers advising them that ordinary prices would be charged on all goods ordered by a certain date proved to be good business get-

be beautifully fresh when delivered to the customer and, not being disturbed, will last as long as it is possible for them to. Straw Easter hats trimmed with violets and violet covered chiffon are being shown in the windows on Jackson boulevard. Plant stock is excellent here and, as usual, only the choicest of cut flowers will be handled.

## THE CARNATION.

#### Worms in Carnation Soil.

ED. AMERICAN FLORIST:—

I am sending you by this mail several specimens of a worm with which my carnation soil is infested. I have not noticed any harm from it yet. Will you kindly tell me what it is and if it is injurious to plants?

C. W. C.

There was nothing in the box on arrival but a little soil, dust dry, and the insects, if any were put in, had either escaped or were dried up.

#### Carnations Carried Over.

ED. AMERICAN FLORIST:—

In one of your recent issues one of your correspondents ask a question about carrying carnations over the second year. Here it has been a most satisfactory experiment. Some two years ago we happened to try one bench some 80 feet long; this year, or last fall we left two benches, mostly

AMERICAN BEAUTY AT THE METAIRIE RIDGE NURSERY CO., NEW ORLEANS, LA

Harry Papworth, Jr., in Walk.

ters and the advance orders have been heavy. Azaleas, lily of the valley, primulas and hydrangeas are among the finest plants here.

The Fleischman Floral Co., as usual, is making great preparations for Easter and has many elaborate baskets and other devices under way for this holiday. An excellent plan to be followed with some of the baskets is to place tins with lily of the valley, already grown, in them. These tins are numbered to correspond with the baskets and thus there is no risk of their not fitting. The flowers will thus

Enchantress. They look now just as well as those newly planted. The fall crop came in early and produced more flowers. They are now off crop somewhat, but are in the pink of condition. As regards a crop about Easter up 'till next July 1, our mode of treatment is to keep our carnations cool as possible by shade and water during the summer so that they do not get exhausted. In the fall we give them a partial rest by keeping rather dry; then all the dead and weak wood is cut out, the wire and strings are repaired, the weeds cleaned out, top

dressed with good hotbed manure and loam equal parts with a little bone meal or flour. One good watering is given and no more for a few days until the growth begins and more water by degrees is given. About October or November they ought to produce a pretty good crop, quite as many as the newly planted ones. Such has been our experience; we cannot answer for others in a different climate, as circumstances or a more southerly climate might alter the case. I would say experiment yourself with a piece; there is nothing like your own experience.

J. B.

Frederickton, N. B.

a self-evident fact that the experiment was a success, considering the fact that here in the west the same price is paid for carnations practically all the time—summer and winter. Taken as a whole there is nothing specially to favor the average beds of carnations being carried over the second season but where one has a good healthy lot of plants in the spring and a good demand throughout the summer and fall, with care and plenty of ventilation, good handling and management and a crop of tomatoes to follow early the next spring, we would consider it a wise thing to carry the plants over. How-

be of great benefit in aiding the plants to resist the hot bright weather.

Wherever possible, the ground should be put in condition for planting out the young stock. In the extreme south the time to plant is now. Further north a month later will be all right. The ground selected for planting should have ample natural drainage, and when the ridge and furrow style of planting is adopted, the same can be easily irrigated during periods of drought. Where the ground is limited in extent the plants can be set out in beds in close rows and worked with a hand cultivator, but where there is plenty of room the ridge and furrow system is preferable. The grass is easily kept in subjection, the drainage is more perfect and working with the plow conserves the moisture to the utmost in times of drought.

WM. LEAR.

### Horticultural Society of New York.

#### AWARDS AT SPRING SHOW.

The following are the awards at the spring flower show of the Horticultural Society of New York, held in connection with the convention and exhibition of the American Rose Society as reported in our last issue:

Kentia Belmoreana specimen—Siebrecht & Son, New Rochelle, first.

Kentia Forsteriana, specimen—Siebrecht & Son, first.

Vase of Stocks, Queen Alexandria—Chas. Hathaway, East Orange, N. J., (gardener Max Schneider), special mention.

Daisies—A. L. Miller, Brooklyn, special mention.

Bunch of Snapdragons—Francis X. Gully, Ramsey, N. J., special mention.

Three plants of stocks—Francis X. Gully, Ramsey, N. J., first.

New Carnation Wodenethe, Winthrop Sargent, Fishkill-on-Hudson, N. Y., (Frank Whitney, gardener), certificate of merit.

New Carnation Pierson's Pink No. 40—F. R. Pierson Co., Tarrytown, certificate of merit.

Cytisus praecox—Samuel Untermeyer, Yonkers (W. H. Waite, gardener), first.

Hippeastrum (Amaryllis) hybrids—Samuel Untermeyer, Yonkers, first.

Phoenix rupicola—Siebrecht & Son, first.

Chamaerops humilis—Siebrecht & Son, first.

Encephalartos Altensteinii—Siebrecht & Son, first.

Adiantum Farleyense and Lily of the valley—A. N. Pierson, Cromwell, Conn., special mention.

Violet Marie Louise—Thos. De Voy's Son, Poughkeepsie, certificate of merit.

Calla Elliottiana—John Lewis Childs, special mention.

Carnation Mrs. C. W. Ward—The Cottage Gardens Co., Queens, certificate of merit.

Carnation Alma Ward—The Cottage Gardens Co., certificate of merit.

Artistic decorations of hat, parasol and fan, trimmed with violets and orchids—Rosary Flower Co., special mention.

NEW YORK HORTICULTURAL SOCIETY.

Cyclamens Exhibited by J. Stuart, Gardener to Mrs. F. A. Constable, Mamaroneck, N. Y.

In a recent issue of the FLORIST I noticed an inquiry from "G. T.," Virginia, and I would like to mention some carnations that were carried over at the establishment of H. W. Manike of Tacoma, Wash. They were Lawson and Enchantress and the way they were handled may be said to have proved a profitable experiment when we consider total of time and space occupied and the financial returns. The plants were not very large when benched after a season's growth outside and not early planted, consequently in the early part of the first season no great number of blooms were cut. A fine cut of choice flowers came on in early spring and continued through the summer and the plants were neglected somewhat until the demand began in fall when they received more attention and a cleaning up, picking over, mulching and watering. They were quite promising in the fall and supplied a goodly cut of very nice flowers. They greatly outdid the newly planted stock until after the holidays, in number and quality of flowers.

As the next spring came on they began to fail and it was decided to plant the space to early tomatoes. The space was planted to them, and carnations left in for a while until they interfered, then taken out and the space given to tomatoes altogether. A fine crop of tomatoes soon grew and the crop finished in just the right time to fill the space with a crop of carnations for the next year. No exact record was kept of either crop of carnations, or tomatoes, but it was

ever there is a lot depending on the man who has the handling of them.

TACOMA.

### Carnations in the South.

The month of March with its warm weather marks the beginning of the end of indoor culture generally all over the south. Not that fair carnations cannot be produced for a couple of months, but the blooms begin to get smaller and lose much of their keeping quality. All the points in good culture should be strictly observed, giving the plants the limit in fertilizers. A good shade on the houses will

NEW YORK HORTICULTURAL SOCIETY.

Lager & Hurrell's First Prize Orchid Display.

### Echoes of the Rose Show.

A feature of interest was the classified exhibit of various types of roses by Dr. E. B. Southwick. It showed the painstaking work of a skilled rosarian and botanist. It was not an exhibit of flowers but a classification of varieties and a commendable feature.

Cornell University should be credited with two good men whose interest in horticulture is untiring. These are Prof. John Craig and L. B. Judson of its department of horticulture.

The exhibit of A. N. Pierson Inc., Cromwell, Conn., was very fine but was not entered for competition. In addition to the very fine roses there was a beautiful display of *Adiantum Farleyense* and lily of the valley.

The Cottage Gardens Co., Queens, N. Y., staged a fine exhibit of its carnations—Alma Ward and Mrs. C. W. Ward.

Pierson's Pink, a seedling carnation by F. R. Pierson, looked well and attracted attention.

The prize winning exhibits of Richmond and Killarney by A. Farewell were truly magnificent.

A feature deserving high praise was the orchid exhibit of Lager & Hurrell. Not only was the stock very fine but the arrangement and staging was perfect.

We must say a word for Joseph A. Manda, manager of the show. He filled the bill. He was always on the job and while not obtrusive or fussy he knows how to do the right thing at the right time.

The chancicleer hat and floral muff, made of violets and *dendrobium's* exhibited by the Rosary Flower Co. were very pretty features.

### THE BANQUET.

The St. Patrick's night banquet at the Fifth avenue restaurant was very interesting and enjoyable about 300 being present. Patrick O'Mara was toastmaster and he is well known to be an expert in that line. There was an excellent musical programme, and the different speakers said many good things. A large number of the visiting rosarians were present with their lady friends and the affair was an unquestioned success. Chairman Sheridan and his committee are to be congratulated. In his address of welcome to the American Rose Society President Miller, of the New York Florists' Club, spoke in part as follows:

Mr. Toastmaster, Mr. President and members of the American Rose Soci-

ety:—Ladies and gentlemen, I have been given a task. If I could express my feelings I would say a good many kind words of praise to you but, however, I will endeavor to do the best I can. Little did I think several months ago that I would have the honor to welcome your society and to make you feel at home.

It is needless for me to say that the New York Florists' Club extends a hearty welcome to all. Gentlemen, you are always welcome and the more often we meet our brother florists from other sections of the country and talk matters over—let it be the rose, carnation, sweet pea or any other society connected with our business—let us be neighborly and friendly and our work will be a great deal lighter. Of course we must not forget the S. A. F., the foundation of all our societies, and hope that we will all meet at Rochester in August next. I told President Frank Pierson that one of the largest locomotives in New York city would not be strong enough to carry the members of the New York Florists' Club to the convention city.

Now, ladies and gentlemen, when I was elected president of the club I promised to do all the work that was piled upon me, but would have to be excused on the talking end; as I look over the lengthy programme and see such distinguished orators who certainly can talk and who I know you will enjoy I must give way to those gentlemen. I trust that we will have in the near future the pleasure of entertaining you again, and with a rising toast we drink to the health, prosperity and long life of the American Rose Society.

### PROFESSOR CRAIG'S ADDRESS.

Speaking of the "Relation Between the Florists and the Experiment Station," Prof. Craig drew attention to the significant fact that the entire state led all others in the extent and variety of its horticultural products. She stood first in the annual output of deciduous fruits, first in the value of nursery products, first in the output of vegetable crops, first in the extent of land covered by glass for the forcing of vegetable and flower crops and first in the value of her floricultural products. She occupied a proud and enviable position in the horticultural world.

He then commented upon the peculiar fact that while most of the agricultural industries were well cared for by the state through its experiment station activities, floriculture was but weakly represented. In look-

ing for the reason it appeared that the responsibility of this condition rested primarily upon the florist himself, for the manner in which the other industries was represented was due in large measure to the aggressiveness of the men in the field. That the greenhouse equipment for the experiment station research was painfully inadequate in the state which claimed floriculture supremacy was a reflection upon the progressiveness of the men in the work. The speaker cited the conditions existing in Illinois where the state association had not only secured a fine range of commercial houses for the agricultural experiment station but also a grant of \$10,000 to be used in conducting experiments in floriculture. This illustrated a splendid type of co-operation between florists and research officers.

The germ of a similar movement had been started in New York by the recent action of the Florists' Club of Buffalo which had resulted in the introduction of a bill in the New York legislature providing for an appropriation to cover the cost of erecting greenhouses to be used in solving problems in commercial floriculture. These houses are to be located at the New York State College of Agriculture at Ithaca where the glass structures already in use are now devoted to laboratory and educational work. The movement had already received the endorsement of the Rochester Florists' Club and the support of the executive committee of the national society. He raised the question as to the position and attitude of the New York florists in promoting such a movement. The work was theirs and should be promoted or discouraged according to their own views and desires.

### ADDITIONAL AWARDS.

W. G. Badgley, Chatham, N. J., won the prize of \$25 for the best vase of 50 Killarney roses offered by A. J. Guttman. The Dorrance challenge prize, which has been offered by Benjamin Dorrance, Dorranceton, Pa., for a number of years but never won, was awarded to Mr. Dorrance this year by the judges. In Division B, Class 121, the United States Cut Flower Co., Elmira, N. Y., took first for 25 Ivory.

### ADDITIONAL VISITORS.

P. J. Donahoe, Boston, Mass.; John A. Evans, Richmond, Ind.; P. H. Barnes, Harrisburg, Pa.; Richard Vincent, Jr., White Marsh, Md.; S. S. Skidelsky, Philadelphia, Pa.; J. A.

MASSACHUSETTS AGRICULTURAL COLLEGE.

Short Course Students in Agriculture and Horticulture, Winter Season, 1910.

TRI-CITY FLORISTS' CLUB BANQUET, MARCH 17, 1910

Valentine, Denver, Colo.; E. G. Hill, Richmond, Ind.; Francis G. Marchan, Dorrenceton, Pa.; Anna Dorrence, Dorrenceton, Pa.; A. J. Loveless, Lenox, Mass.; Fred Burki, Pittsburg, Pa.; Chas. Schwenke, New York; C. C. Taylor, Louisville, Ky.; James Campbell, Ardsley, N. Y.

#### Massachusetts Agricultural College.

##### SHORT COURSE IN FLORICULTURE.

The short course in floriculture closed March 11. It is to be regretted that so few took advantage of the excellent opportunities to avail themselves of practical and theoretical information along floricultural lines, and it is hoped the course may be more largely attended next year. The registration for this course included: Albert C. Bradstreet, Topsfield, Mass.; Lydia A. Bowser, Cohasset, Mass.; George A. Gray, Beverly, Mass.; Edward I. McCarroll, Waban, Mass.; Albert Lewis, Rockaway, Long Island, N. Y.; L. E. Torrey, Southbridge, Mass.; John L. Killam, Boxford, Mass.; Willard M. Pease, Monson, Mass.; William Seace, Pittsfield, Mass.; Edwin G. Scott, Garfield, Wash.; Edwin R. Selkregg, North East, Pa. While it is difficult to arrange a course which will meet the needs of all classes of students, the aim is to give the beginner as much elementary information as possible without neglecting those who are more advanced, and at the same time to make the work sufficiently scientific to satisfy the needs of those who have been longer in the business.

The talks by the various practical men who have generously assisted in the course have again proved most valuable. Aside from the general lectures of the course the following spoke on some special feature of greenhouse

work. F. J. Elder, heating expert, Lord & Burnham Co., Irvington-on-Hudson, N. Y., on "Heating"; Eber Holmes, Montrose, and W. H. Elliott, of Brighton, on "Rose Culture"; Peter Fisher, Ellis, Mass., on the "Development of the Carnation"; M. A. Patten, Tewksbury, on "Cultural Methods for the Carnation." E. O. Orpet, of South Lancaster, gave a very fine talk on orchid growing and exhibited a large number of varieties in bloom. E. J. Canning, of Northampton, spoke on the work of the private gardener. Aside from these speakers, C. H. Totty, of Madison, N. J., gave an excellent talk on chrysanthemums. J. K. Shaw, of the horticultural division of the experiment station, spoke on the principles of plant breeding, and H. D. Haskins, of the chemical division of the experiment station, gave an instructive talk on fertilizers for the greenhouse crops. Edward MacMullin, of Boston, was scheduled to speak on the retail trade, but was prevented from doing so because of sickness.

The Saturday observation trips proved especially profitable. The following are among the ranges visited: H. W. Field's, Northampton; A. N. Pierson's, Cromwell, Conn. The Montgomery Co.'s, Hadley; Smith College conservatories, Northampton; Mt. Holyoke College conservatories, South Hadley; Waban Rose Conservatories, Natick; Wm. Nicholson's and S. J. Goddard's, Framingham; Butterworth's, South Framingham; Peter Fisher's, Ellis; Geo. Sinclair's, Holyoke, and Wm. Sim's, Cliftondale. Full notes on each of these trips were required. The Massachusetts Agricultural College stands ready to assist the state florists in every way possible; the mission of the floricultural department is to be of service to the practical growers and retail men.

#### Tri-City Florists' Club.

Probably the prettiest and most elaborate decorations ever seen in Davenport, Ia., were unfolded at the fourth annual banquet of the Tri-City Florists' Club, which was held at the outing club on the evening of St. Patrick's day when some 16 couples who had been invited sat down to a sumptuous banquet. The tables were placed in the form of a horseshoe and were profuse with cut flowers donated by the members of the club. A bar for the shoe was formed by an orchid vase which defies description, being exquisite in its very conception. At the banquet last year it was thought that the decorations had reached the height of the decorators' art, but it was left for Harry Bills, John Temple, E. O. Boehm and Theodore Ewoldt to reach the mark of perfection.

Theodore Ewoldt acted as toastmaster and speeches and humorous talks were made by various members. Harry Bills, chairman of the committee, did himself proud by his remarks in introducing the toastmaster of the evening, and R. C. Rohlf's sang a song that created no little merriment. Wm. Knees won the applause of all the ladies in his speech on behalf of the fairer sex. Supt. Boehm, John Temple and Ludwig Stapp all received their share of the applause for their talks along humorous lines. After the banquet everyone took part in the ball, and made merry till the wee hours of the morn, all voting the banquet and ball the most enjoyable affair ever held by the club. The committee takes this means of thanking one and all who donated flowers and by their presence made the success that attended the fourth annual banquet.

# THE AMERICAN FLORIST

MEMORIAL DAY stock now claims attention.

WE shall be pleased to have Easter trade reports from all our readers.

CUSTOMERS will remember that pickled stock and perhaps buy artificial flowers next time.

### Society of American Florists.

#### DEPARTMENT OF REGISTRATION.

As no objections have been filed, public notice is hereby given that the registration of the rose, Wm. R. Smith, by The Conard & Jones Co., West Grove, Pa., becomes complete.

H. B. DORNER, Sec'y.

March 17, 1910.

THE fourth annual rose festival will be held at Portland, Ore., June 6-11. The round trip fare from Missouri river points is \$50, tickets good for 90 days.

PLAN now for the National Flower Show which will be held at Boston next March. The preliminary premium list appeared in our issue of March 5.

IN our telegraphic report of the awards at the exhibition of the American Rose Society last week, Adolph Farenwald was not credited with the first prizes which he was awarded in classes for 50 blooms of Killarney and 50 blooms of Richmond, the premiums being offered by Henshaw & Fenrich and H. Froment, respectively.

THE Boston Orchid Show occurs this year, May 26-30, 1910—don't forget that. Bunker Hill monument still stands and part of the Common remains. The old lady with the spectacles is usually very charming at that time of year, with a very reliable east wind for hot days and beans for breakfast every Sunday morning. "I want to know."

### The Grapes of New York.

#### IMPORTANT CONTRIBUTION TO POMOLOGY.

The publication of "The Grapes of New York" in the Report of the New York State Experiment Station, Part 2, for the year 1909, by Professor U. P. Hedrick, horticulturist at the station, is a highly meritorious contribution to an important field of American pomology. It might be inferred from the title of the work that it is only of local value, but such is far from the case as it is in reality of high importance to viticulturists throughout North America, as inferences and deductions can be readily drawn, applicable to the eastern section of the country where grape growing is possible. The scope of the work is clearly stated in the preface as follows: "Brief historical narratives of old world and new world grapes; an account of the grape regions and grape growing in New York state, with statistics relating to the grapes, wine and grape juice industries in this state; a discussion of the species of American grapes, and synonymy, bibliography, economic status, and full description of all the important varieties of American grapes. In the footnotes will be found brief biographical sketches of those persons who have contributed most to the evolution of the grape and to grape-growing in America, and some historical and descriptive notices of certain things pertaining to the grape which do not belong in the text and yet serve to give a better understanding of it, or otherwise add to the completeness of the book. Color plates are shown of varieties which from various standpoints are considered most important."

In Chapter IV the author deals clearly and comprehensively with the species of American grapes, and follows L. H. Bailey in his specific interpretation of North American vitis and credits 23 species to North America. We, however, are strongly of the opinion that when the genus is critically examined throughout North America in the same way that rubus, crataegus and some other genera have been lately, that a number of new species will be dis-

covered, and admitted; and as the tendency seems to be with some of our most painstaking botanists to multiply species, when scientific facts point clearly in that direction, it is therefore quite likely that the wild grapes will be further investigated in the near future, and the species increased.

The author calls attention to an important specific status amongst grapes, first observed by Professor Millardet of Bordeaux, namely, the value of the diaphragm as a means of distinguishing species. Any horticulturist familiar with the wood of the grape has observed that grape canes contain a central pith, and this pith is interrupted at the joints by a woody tissue known as the diaphragm. In different species this diaphragm varies, and is constant in all the individuals that represent the species. In some species it is quite thick, in others medium, in some quite thin and, in one, entirely absent. There is an excellent color plate showing the canes of 10 species, with the position of the diaphragms plainly shown. It is highly important that all viticulturists who are aiming at the improvement of the grape, should be familiar with the specific attributes of the various species from which our cultivated grapes have been evolved, because, as the author says, "The great problem of plant breeding in the future will be to correlate the characters known to exist in the plant being improved," and whilst in the case of the grape, the main factor is the highest quality of the fruit, there is a physical correlation in every part of the plant that is being improved, commensurate with, or corresponding to, its development.

For example, take the northern Fox grape (*Vitis labrusca*): The blood of this species is strongly prevalent in the large majority of the best and most popular American grapes today, and the correlation of its physical qualities in its hybrid offspring can easily be detected, such as the brown pubescence of the leaves underneath; more or less musky aroma in the fruit, which is so pleasing to Americans; and other qualities. It is not probable, judging by past and present experiences, that an all-round first-class variety of grape can be evolved, satisfactory and popular with the American public, in which the blood and physical properties of the northern Fox grape will not be markedly present. This should be borne in mind by hybridizers, and in our judgment, a great deal of wasted effort may be averted in trying to produce something which may not be adapted to many exacting conditions. Prof. Hedrick devotes considerable space recounting the many determined efforts made by Englishmen, Frenchmen, and others, towards establishing the European grape and its varieties, many years since, in eastern America, but which after large expenditure of money and time ended in complete failures. The western section of the continental divide, particularly in California, is the only part of this continent where it will flourish.

The color plates, in the work, illustrating 92 varieties of important American grapes, are superb reproductions. We do not think that human

ingenuity could devise anything better. Certainly nothing comparable exists on the same subject. In the body of the work all the leading varieties are technically described with numerous historical and other notes. A chapter is devoted to briefly describing or noting "the minor varieties of American grapes;" that is, every variety of American grape that has ever been recorded or brought to light, no matter if it turned out to be worthless. The amount of work involved in the experimentation, investigation, bibliographical references and compilation, in this record of American grapes was enormous. The Geneva Experiment Station, the gentlemen who assisted in this work, and Prof. Hedrick are to be congratulated in placing before the world a work which will take its place in the front rank of American pomology.

JOHN DUNBAR.

### Meetings Next Week.

Baltimore, Md., March 28, 8 p. m.—Gardeners' and Florists' Club of Baltimore, Florists' Exchange hall, St. Paul and Franklin streets.

Cleveland, O., March 28, 7:30 p. m.—Cleveland Florists' Club, Progress hall, 2610 Detroit street.

Lake Forest, Ill., March 30, 8 p. m.—Horticultural Society of Lake Forest, Council Chamber, City hall.

Lake Geneva, Wis., April 2, 8 p. m.—Lake Geneva Gardeners' and Foremen's Association, News building.

Pasadena, Calif., April 1, 8 p. m.—Pasadena Gardeners' Association, Board of Trade rooms, West Colorado street.

San Francisco, Calif., April 2.—Pacific Coast Horticultural Society.

## Wants, For Sale, Etc

One Cent Per Word, Cash with Adv.

For Plant Ads., See Ready Reference Section.

Where answers are to be mailed from this office enclose 10 cents extra to cover postage, etc.

**Situation Wanted**—By young man with twelve years' experience in seed business, both retail and wholesale; can furnish reference. Address  
Key 475, care American Florist.

**Situation Wanted**—As second gardener or single handed place; understands greenhouses, lawns and vegetables; best references; English; single. Address  
BURTON,  
13 Dixwell Ave., New Haven, Conn.

**Situation Wanted**—As gardener; private; 25 years' experience; married; no children; ready for engagement April 1; best of references. Address  
MAX STERDLER,  
Oconomowoc, Wis.

**Situation Wanted**—By A No. 1 grower of cut flowers and potted plants; good propagator; German, 36 years of age; able to take full charge; have always made a success of it. Address  
EMERT FRIGGE,  
316 Capitol Avenue, North Lansing, Mich.

**Situation Wanted**—By practical grower of cut flowers and pot plants in general; 20 years' experience in England, 3 years in Canada; private or commercial; married; middle aged; total abstainer. Address  
HENRY TUCKER,  
815 Queen St., Chatham, Ont., Canada.

**Situation Wanted**—By competent grower of cut flowers and potted plants in general; willing to take charge; or as foreman in an up-to-date commercial place; 26 years in the trade; middle age; single, sober. Address  
Key 461, care American Florist.

**Situation Wanted**—On commercial or private place by life experienced grower of roses, carnations, mums and pot plants in general; capable of taking full charge; age 33; single; best of references please state wages and particulars in first letter. Address  
CHAS. KLEINSORG,  
44 S. Oak st., Kansas City, Mo.

**Help Wanted**—Man for carnations and general greenhouse work; good potter.  
G. VAN BOCHOVE & BRO.,  
Kalamazoo, Mich.

**Help Wanted**—A man who is handy with garden and outside flowers; work on shares or salary; state age experience and nationality.  
ALPHA FLORAL CO., Kansas City, Mo.

**Help Wanted**—Man for general greenhouse work at once; state wages and experience in first letter. Address  
A. BOMMERSBACH,  
Decatur, Ill.

**Help Wanted**—Four rose section men to do potting, shifting, planting and help in different sections cutting roses, disbudding, etc.; salary \$50.00 per month until section is open.  
POEHLMANN BROS. Co., Morton Grove Ill.

**Help Wanted**—At once—working foreman, to take charge of extensive trial gardens of a large Eastern seed house; must thoroughly understand testing and growing seeds, bulbs, etc., of all kinds, both under glass and outside reference required; give experience and wages wanted. Address  
Key 471, care American Florist.

**Help Wanted**—A working practical gardener, bright, active, energetic, rigidly temperate, familiar with steam-heated greenhouses flower gardens and decorative work; a married man, English-speaking; wages to begin, \$75; excellent house, fuel and light. Apply, giving full particulars and references, to  
SUPT. ALLEGHENY CEMETERY,  
Pittsburg, Pa.

**For Sale**—Only greenhouses in Hendricks Co. Address  
MRS. B. F. HOWELL, Danville, Ind.

**For Sale**—5000 feet of glass with dwelling; no competition; a rapid growing trade; a rare opportunity for a florist of small means.  
DWIGHT GREENHOUSES, Dwight, Ill.

**For Sale**—Four greenhouses and 1 acre or more of land; also house and lot next to same in one of best cities of Northern Ohio; one of firm retiring reason for selling. Address  
Key 455, care American Florist.

**For Sale**—One brickset Furman boiler in good shape; 1 model No. 30-5 good as new, used two winters, very cheap if taken at once; will install larger one in place of the two.  
Key 468, care American Florist.

**For Sale**—10,000 ft. glass in city of 1,800, in the middle west, established retail business of 25 years; close to four large cities; one of the best locations in the country to build up wholesale business; owners are engaged in other line of business and cannot give greenhouse personal attention; present owners can handle entire output of purchaser; a splendid opportunity for live energetic man. Address  
Key 463, care American Florist.

**For Sale or Rent**—40,000 square feet of glass, in good location; needs partial rebuilding; rent accordingly, or will sell at reasonable price.  
Key 460, care American Florist.

**Wanted to Buy or Lease**—with privilege of buying, small greenhouse establishment, in June; have \$1000 for first payment; Ind., Ill., Iowa, Ky., or Mo. preferred; give full particulars in first letter. Address

#### Chicago.

#### EASTER PROSPECTS GOOD.

The condition of the market the past week has been very difficult to describe. One day wholesalers were running around picking up stock to fill orders, the next their growers were loading them up with stock that had evidently been cut several days and held. Some growers, apparently, will never learn the happy medium between holding a day's cut in hand and holding a week's, putting the commission men to all kinds of inconvenience to look for stock and then dumping old open roses and stale carnations in quantities that can not be handled. As regards the supply of flowers it will be much as we anticipated in these columns. Roses are in good cut, plentiful and of excellent quality as we supposed they would be, but carnations, and especially white, are on the short side, several growers who have been in full crop reporting a scarcity. We may, of course, look for this kind of report before any holiday but, as outlined some time ago, the roses had a good rest while the carnations were flowering and just now it is the turn of the roses. The number of short and undeveloped lilies seen around the market indicates if not a shortage, at least no glut, and there will be few good lilies left to sell on Saturday night. Bulbous stock is very plentiful, the price of the forced article having been forced down by the large amount of outdoor narcissus coming in from Virginia, southern Illinois and other points. While the quality of this is not, of course, so good as that of the forced stock it is fairly good and answers many purposes, consequently customers will take it rather than pay the higher price for forced stock. As to the East-

ter prospects, they certainly never looked better. City retailers have bought forward with more spirit than usual as their customers have done the same to them and sheaves of orders from out-of-town points have come in to the wholesalers in advance. Although the weather is of a kind to soften the stock, one hopes for its continuance as it will certainly increase the volume of transient trade. Outside the leading lines of stock there is a great variety of small flowers that are always useful at this time. Sweet peas are very variable in quality. There are some good ones, but a far larger number are short and poor. White daisies are superb, fine, pure flowers of excellent substance. Marigolds, mignonette, fuchsias, forget-me-nots, pansies and a host of others are in full supply and mostly of good quality. Boxwood is plentiful but all the better kinds of green, such as smilax, Asparagus plumosus and Sprengeri are scarce. Ferns are high and not of the best quality in all cases. Violets are about equal to the demand but soft in many cases, while gardenias and orchids meet with no very spirited demand. American Beauty roses of high grade are scarce, but there is plenty of the small and medium lengths.

#### NOTES.

At Peter Reinberg's we noticed some of the finest Beauties on the market, long stems with good foliage and excellent flowers. There is also plenty of medium and short grades. Roses of all kinds are here in large quantities and good, such varieties as Uncle John, Ivory and Sunrise, which are not available everywhere, being well represented here by fine stock of magnificent size and substance. Carnations are good and plentiful, indeed all stock is in first class condition.

2,000,000 FEET OF MODERN GLASS.

# Peter Reinberg

35 Randolph St., CHICAGO.

Harry Rowe had the decorations at the wedding of Miss Wilkowski, daughter of a high official in the First National bank, to Mr. Pick of the Albert Pick Co., March 21. The ceremony took place under a canopy of wild smilax, palms and Easter lilies. The bridal bouquet was a shower of valley and white roses while the bridesmaids carried baskets of pink sweet peas. The tables in the banquet hall were arranged to seat 150 guests and were done in Killarney roses. The ballroom was in palms and southern smilax. Mr. Rowe reports business as improving right along and Easter prospects good.

A Chicago corporation, under the name of Lord & Burnham Co., has been formed with Geo. F. Sykes, F. S. Munro and Geo. Sykes as incorporators. The company is, of course, con-

nected with the New York firm of the same name but has been incorporated to obtain a local legal standing and for other conveniences. The capital stock is \$50,000 and the company is formed to deal in greenhouses, fixtures, horticultural implements, etc. Ground has been secured at Des-plaines for a model factory, particulars of which are given in our "Allied Trades" department, page 468.

Kyle & Foerster are showing large quantities of excellent Easter lilies both in pots and cut, while ferns in pots are a leading line. This go-ahead firm is certainly handling the goods.

At Winterson's Seed Store counter trade in seeds, bulbs and plants is being helped considerably by the fine weather and a busy week is recorded.

E. F. Winterson has been showing a very fine line of Easter plants, such as rambler roses, azaleas, lilies, li-

lacs, hydrangeas and others all week and a big business is reported.

Vaughan & Sperry are handling southern bulb stock but the quality can not compare with the forced daffodils they are showing. These are certainly fine in every way, so good that they clean up regularly despite the lower price at which they are offering the outdoor stock. Good sweet peas, roses in all the principal varieties and Easter plants are among the showings here this week. Advance orders for Easter foreshadow a record breaking holiday.

The Easter show of flowering plants is now open at the Garfield park conservatory and will continue until April 1. The large house is looking well and the annexes devoted to various flowering and foliage plants are also in the best of order and gay with color. There are many orchids in

# J. A. BUDLONG

37-39 Randolph Street, CHICAGO.

Roses and Carnations  
A Specialty....

WHOLESALE  
GROWER of

# CUT FLOWERS

bloom and the fernery is a pleasant retreat. Gardener John Sells is certainly to be congratulated on having such a fine show with all the difficulties he has had to meet.

Edward Ladiges, who was up till a short time ago employed in John Mangel's store and since the opening of Thos. J. McNally's store has been employed there, died on Saturday at the County hospital after a very brief illness from pneumonia. Ed. was a good decorator and designer and much liked. His funeral work was marked by strong individuality and was always striking and good. The body was taken to his home in New York for interment.

Poehlmann Bros. Co. is strong on all classes of roses, the quality of the stock now being sent in by Adolph Poehlmann from Plant B at Morton Grove being remarkably fine. The immense stock of Easter lilies is going down but there will be plenty for all comers and the quality is excellent. John Poehlmann prides himself, and with just cause, on being able to fill any kind of order of any size.

The sweet peas H. C. Blewitt is showing in the Flower Growers' Market are among the best coming to the city. Mr. Blewitt is going to build a new greenhouse as an addition to his plant at Desplaines. It is to be 27x150 feet and Geo. Garland's newest improved truss construction will be used. Probably this will be the first greenhouse of the new style.

Geo. Sykes, of the Lord & Burnham Co., will address the Lake Forest Horticultural Society, March 24, on greenhouse construction, especially in regard to aspects for various purposes and for securing the full benefit of the rays of the sun. Mr. Sykes' talk will be illustrated by explanatory diagrams prepared by himself and should prove most interesting and instructive.

At the J. A. Budlong store roses of excellent quality have been arriving all the week and carnations are in sufficient quantity to meet all demands, white being the shortest. Out-of-town trade has been good during the week, also local business and the advance orders for Easter are indicative of a good demand.

As an instance of how quickly good fresh stock cleans up the tables at Wietor Bros.' store may be mentioned. There is great activity when the stock arrives but later in the day

## "The Busiest House in Chicago"

**W**IRE us for what you want and we will take care of you.

# J. B. DEAMUD CO.

CHICAGO.

ice boxes and tables look bare and the amount of stock moved is remarkable.

Mrs. Alice Hastings, mother of Mrs. Edwin A. Kanst, died March 23 at Minneapolis. Mrs. Hastings was well known in Chicago, where she often visited, and had a large circle of friends by whom she will be sincerely mourned.

Beauties, fine roses of all kinds and Easter lilies are coming in quantity to the store of Bassett & Washburn. This noted firm has once more hit the Easter market just right and a very big shipping trade to all points is assured.

August Lange, after long and careful deliberation, says the horse is behind the auto in every way and has accordingly ordered two new electric machines of the latest model, one for the store and the other for home use.

J. B. Deamud Co. is receiving New York sweet peas of good quality and they arrive in fine condition. The white carnations that this house is receiving from Hunt Bros. are also especially good.

E. C. Amling had a magnificent stock of all lines for Easter. Mr. Amling does not care to prophesy but we think he will be disappointed with anything less than a record breaker this Easter.

A fire occurred March 21 in the Flower Growers' Market building on the fifth floor, but beyond a little damage by water no harm was done to the stall holders.

Wm. A. Engbrecht, of West Twenty-first street, will build a new store and greenhouse, one story and basement,

on Twenty-first place in the near future.

C. W. McKellar is handling large quantities of southern bulb stock such as Princeps, Golden Spur and other daffodils, 75,000 flowers arriving one day.

A meeting of the Horticultural Society executive committee will be held at the Union restaurant Thursday, March 24, at 6 p. m., for the furtherance of fall flower show plans.

Vaughan's Nurseries have leased 80 acres additional at Western Springs, adjoining the present property, giving a total nursery area of 150 acres.

A. J. Simmons of Sixty-third street and Yale avenue has opened a fine new store and conservatory, just in time for Easter.

Zech & Mann's leaders this week are excellent Bride, White Killarney and Richmond roses, callas and elegant narcissi.

John Kruchten reports a busy week. His rose and carnation stock is excellent and boxwood is still a leading line.

Sinner Bros.' roses are in excellent shape now. Carnations are not quite so plentiful but the quality is first rate.

C. A. Schnell, late of the Donaldson store in Minneapolis, has returned to his old position with John Mangel.

Hoerber Bros. commence work on their new addition to the greenhouse plant at Desplaines this week.

H. N. Bruns is investigating automobiles.

## POEHLMANN'S FANCY VALLEY EXTRA FINE EASTER LILIES

We make these a specialty.  
Can supply them all the year.  
Once tried you will have no other.

### St. Louis.

#### LILY SHORTAGE PREDICTED.

The past week has been a busy one. There was quite a demand for white carnations St. Patrick's day, at top prices. Bright weather has had the effect of bringing on the crop and a good supply is expected for Easter. Carnations from the outlook will hold up well. Violets are daily getting smaller and the supply less. Many of the growers report they will not hold out till Easter. Sweet peas are coming in and going nicely, the shortage in violets assisting materially. Bulbous stock is coming on well. Lilies are expected to be short. It is thought there will be enough roses to go around.

#### NOTES.

The Florists' Protective Society, now known as the Retail Florists' Association, held its second meeting last Wednesday at the Washington hotel. Permanent officers were elected as follows: C. C. Sanders, president; Theodore Miller, vice-president; F. C. Weber, Jr., secretary; Robert J. Windler, treasurer. Sixty-five dollars were at once subscribed by members present and letters were received from others willing to support the society. The retailers seem to think that their rights as retailers have been in some way interfered with by wholesalers and they seek satisfaction. The association will also take up the credit system and in other ways endeavor to uphold the business.

A. Jablonsky, of Olivette, has a splendid crop of 2,500 lily plants just right for the Easter market, also a fine crop of carnations which are handled by H. G. Berning.

Alexander P. Geranios, manager at F. H. Weber's, took out papers of citizenship last week. It is rumored

that he will take out other equally important papers shortly.

Young's Easter display of plants is very fine, lilacs, azaleas, lilies, in fact everything seasonable. A special display of roses is made.

W. J. Edwards and Joe Scheidegger are now bringing in some of the finest and longest sweet peas seen in this market.

A meeting of the executive committee of the Horticultural Society was held last Tuesday at the Missouri athletic club.

Grimm & Gorly have taken the store next door for their Easter plant trade. They are hard up for room at that time.

A considerable quantity of flowers were used at the funeral of Ex-Mayor Ziegenheim March 20.

The H. J. Weber & Sons Nursery Co. has a fine stock of rhododendrons for Easter trade.

W. F.

### Minneapolis.

Miss Whitted opened her new store at Tenth street and Nicolett avenue March 21. She will cater to the highest class of trade for which her location is eminently suitable.

The Radisson Shop Co. opened its new store March 22 with a sale of plants. The ice box and fittings not being complete, cut flowers can not be handled for a few days.

Swanson of Nicolett avenue has a magnificent Easter window, the best of stock of all kinds beautifully arranged.

Ralph Latham, in Tenth street, is doing a big business in plants, of which he has an immense stock.

Oscar Carlson's only regret is that he has not more plants to sell. He could have sold many more had they been forthcoming.

S.

### Cleveland.

#### A BUSY WEEK.

The past week has been a busy one. Nearly all retailers report a good St. Patrick's day trade in cut flowers and table decorations. The call for flowers for Palm Sunday was exceptionally good up to the Sunday morning when rain put a damper on everything. The afternoon, however, turned up bright and warm, the church doings using considerable flowers, mostly in white, the demand for white roses and carnations far exceeding the supply. Carnations are bringing a slightly better price and cleaned up quickly. Considerable stock went to the street fakirs, who did a good business, the bright sunshine bringing out many people. Easter lilies have not been over-plentiful the past week, and indications are that they will be a little short for Easter, particularly in pots. Sweet peas and violets are selling well. Valley has been a little slow. String smilax is in good demand. Callas are selling fairly well. Calendula, daisies, freesias and lupins sell on sight.

#### NOTES.

The firm of Smith & Feters has been incorporated into a \$20,000 stock company, consisting of Frank Monroe Smith, William S. Kruzen, Louis A. Koons, Jr., Timothy Smith and Clarence A. Meyers. All of the stockholders except Frank M. Smith were old employees of Smith & Feters. This firm will be known as the Smith & Feters Co., and continue at the old stand.

A very pretty and attractive east end window the past week was that of Westman & Getz, portraying a woodland scene in spring. Pussy willow, birch bark stumps and single violets in pans were arranged with

# DO NOT HESITATE

To Order at the Last Minute. There will be plenty of stock for all.

the artistic skill for which this firm is noted. It was an appropriate display and attracted considerable attention.

The wholesale florists won the last of the series of five games with the retailers, giving the wholesalers three out of five. Score follows.

| Wholesalers. |      |     |      | Retailers.  |      |     |      |

C. M. Wagner's mother died Saturday noon of old age, being about 80 years old; she has been sick for some time. The funeral took place on Monday from the home of her son, East Sixty-sixth street. Services were held at the Schifflin-Christi church.

C. M. Wagner took Geo. W. Smith and Charlie Gilson out to Mentor to Merkel's place one day this week and they report the place looks fine and they were treated royally, Wagner's automobile hitting only the high places on their return.

The past week saw a number of new store openings which helped to clean up considerable stock, the Story & Clark Piano Co. giving roses and carnations to all their friends.

The Jones-Russell Co. has just received a new van and same is one to be proud of. Together with their uniformed delivery men it makes an excellent showing.

John Leuschner, Rocky River, has opened a retail store at 14704 Detroit avenue in connection with his greenhouses and reports a good business.

Kirchner's on Quincy street have added an automobile to their equipment. C. B.

EUGENE, ORE.—H. A. Newton is erecting two large greenhouses in South Williamette street, and will also erect a violet house.

HUNTINGTON, N. Y.—There was a very fine exhibition of carnations at the Trade School building March 8, under the auspices of the Horticultural and Agricultural Society. Most of the flowers came from the greenhouses of August Heckscher, W. J. Matheson, H. T. and A. H. Funnell and the Huntington Nursery Co. Beside carnations there were cinerarias, cyclamens, Easter lilies and violets.

### Pittsburg.

#### PROSPECTS FOR EASTER GOOD.

The market this last week has been pretty good. St. Patrick's day created a heavy demand for white carnations, consequently a number of orders had to be cut down, as white were a little off and yet it is reported a number of retailers carried over a good many dyed ones; the demand for green ones was not as strong as expected. The wholesalers are cleaning up daily on almost everything. The prospects for Easter business looks the "best yet" as a great number of advance orders are coming in. People not holding off until the last minute leads to the belief that business will be good. Stock never was better. American Beauties are selling at stiff prices. Smilax has been very scarce.

#### NOTES.

J. W. Dudley, Parkersburg, W. Va., has been in town disposing of his plants, and states that he has cleaned his greenhouses out entirely, which means that he has been going some.

Ernest Zieger is going to take a trip to Germany. Mr. Zieger is going to spend this vacation in the way of a rest, and expects to be gone about four months.

T. F. Beckert, Neville Isle, states he will have a fine lot of Spanish Iris in blue, yellow and white. This is one of Mr. Beckert's specialties.

The department stores are getting into the plant business—some on a very large scale—carrying all the varieties and slicing the prices.

T. Malbranc, Johnstown, has been laid up with grip but is around again and reports business very good.

Miss A. L. Wells, Steubenville, O., who is touring through the west, will spend Easter in California.

Samuel McClements of the Randolph McClements Co., is back from the east.

Gilbert Weaklin of the Randolph McClements Co. is reported ill.

John Roehrick, Sharon, has bought out Chas. Heinz of that place.

Peter Demas is back from the east.

Visitors: Miss McDowell of A. L. Wells Co., Steubenville, O.; Mr. Tarker, Walton Floral Co., Rice's Landing; E. Bell, Bell Floral Co., Franklin; E. J. Fancourt, Pennock & Meehan Co., Philadelphia. J.

### Rochester, N. Y.

The annual banquet of the chamber of commerce was held on March 18, and President Taft was the guest of honor for the occasion. Salter Bros. had the contract for the decorations. The general scheme in color was pink and green. The whole area beneath the ceiling and over the main floor, in front of the gallery, was covered with a lattice screen about 10 feet from the ceiling. This of course was built in sections on the floor and raised up to its position by pulley blocks. The lattice work was then covered with smilax, from which were suspended drooping racemes of lavender and pink wistarias, which were of course artificial. The front of the galleries and the walls and pillars throughout the auditorium were treated in the same way. The front of the proscenium was banked solidly with palms resting on a base of aspidistras. Surmounting the palms was a solid bank of Tausendschon and Dorothy Perkins roses in pots, the pots of course perfectly concealed. The back of the proscenium was treated in the same way. The banquet table at which the president sat, with other speakers and officers of the chamber of commerce, occupied the center of the stage. The tables were all decorated with large bouquets of pink Killarney roses. About 1,000 men sat down to the banquet. Ladies were admitted to the galleries and about 15,000 ladies were present, and as they were all dressed in elaborate toilets the whole effect, with the decorations was one of remarkable brilliancy. Salter Bros. deserve great credit for their skillful treatment of the decorations.

JOHN DUNBAR.

LEWISTON, ME.—Ernst Saunders will erect another greenhouse 200 feet long on his land at Main street this spring.

PHILADELPHIA, PA.—Window plants, azaleas, cinerarias, hyacinths and cut roses in great variety were exhibited March 14 at a meeting of the Germantown Horticultural Society, held in the lecture room of the Germantown Y. M. C. A. Short talks on the plants and flowers displayed were given by President Heyl, Secretary George Redles, James G. Scott and Edwin C. Jellett.

PLENTY OF EASTER LILIES.

The Easter rush is upon us and all is hustle and hurry. Palm Sunday was a lovely day but there was not much church for the craft. Some had their places in apple pie order as was the case at Harris' where not a stroke of work was done, all the employees being dressed in their best and standing guard in the various houses, to keep the crowds moving that now make an annual visit to admire the wealth of blooming plants. At midnight on Sunday the entire force pitches in and packs orders for out-of-town and have them ready for the early call of the express wagons. This has been the custom for years and will continue under the new proprietors. It was thought Easter lilies would be very scarce but the market appears to be softening a little at this writing; 12 cents per bud and flower has been the pot price. Carnations are advancing as is usual and will sell at from \$4 to \$6 per 100; other stock will remain at much the same prices. This city is famous as a plant center and about all the prominent florists within a radius of 100 miles or more have paid visits to this city and much of the cream of the stock is shipped out of town.

### NOTES.

At the gardeners' dinner last week Fred Kelsey made the speech of the evening. Robt. Craig had said that in England where gardening had reached its greatest perfection the gardener was the chief man of the estate. Mr. Kelsey, recounting his large experience with the owners of large estates in this country, said that many of them placed great confidence in the men in charge and those were most successful who had given thought and studied up the requirements and had a general knowledge, that it was possible for all bright men to acquire. He pictured in glowing colors the future of the gardener in the immense number of beautiful places that would soon equal in magnificence those in

the old world. He said that money would be spent without question when the proper results were shown and it behooved the present and coming generation of gardeners to study and leave no stone unturned in their search for the knowledge necessary to enable them to grasp the opportunities when they were presented.

Floral Philadelphians are a trifle chesty just at this time; those of us who had the good fortune to attend the National Rose show in New York last week and saw the way their brethren carried off the prizes, all the firsts for entries in which they competed, had good cause to pat each other on the back and say "We are the people." John Walsh Young, Myers & Santman, Robert Scott & Son, Adolph Farenwald, Teddy Towill, who was second on Richmonds with his magnificent vase of blooms only because his neighbor, Mr. Farenwald, had them just a shade better. Farenwald's Killarneys were superb blooms. Wm. Geiger of Oak Lane, and Robert Scott & Son. It was a clean sweep and the trade of the Quaker city has indeed cause to be proud of its growers. The two vases of Richmond entered by Messrs. Farenwald and Towill were the feature of the exhibition, such quality in red roses was never exhibited before.

#### Horticulture for Women.

Laura Blanchard Dawson, of Jamaica Plain, was the lecturer, March 5, 1910, before the Massachusetts Horticultural Society, speaking on "Horticulture as a Profession for Women." The stage was decorated with eight splendid specimens of Dendrobium nobile virginalis, from the conservatories of Dr. C. G. Weld. There was a large attendance, particularly of ladies, and Miss Dawson's talk was listened to with close interest. Miss Dawson dwelt upon the growing importance of women's work in horticulture. One of the earliest women gardeners in this country was a Miss Lamballe, of South Carolina, in the middle of the seventeenth century. Abigail Adams was a successful gardener. Many women have written books on horticulture. Previous to 1880 there were six women members of the Massachusetts Horticultural Society; now there are many.

There are phases of horticultural work for which women are particularly fitted, said Miss Dawson. In Germany there are five horticultural schools, conducted by women. The first of these was started about 20 years ago. The best paid work in German horticulture is teaching gardening in the sanatoriums, where gardening is a part of the occupation of the patients. In England there are two good horticultural schools exclusively for women. About 80 pupils are graduated each year. One of the most important of horticultural pursuits is the growing of flowers for the retail trade. One to succeed in this line must have executive ability. In the middle west it is the common custom to have women to make up wreaths, wedding decorations, etc.,

florists insisting that women have better taste and skill in this line than men. In addition to high scientific knowledge, to succeed in growing flow-

ers for the wholesale trade, one must have good health and tremendous nerve force. Women can make a success of raising orchard fruits, especially if they have in connection with it a plant for putting up fruit in cans. Women have also successfully grown fancy vegetables for market. The average woman should not attempt such work as raising plants for landscape gardening. The growing of herbaceous plants, however, affords an opportunity for women.

Miss Dawson then said that no woman should attempt landscape gardening without possessing more than the average strength. To do a week's work in an office on plans, following this with a month in the field, is not easy for any woman. The woman landscape gardener must know architecture, grading, draining, the technique of planting and have a great sense for color and form.

There should be opportunities for women as consulting gardeners. In small towns, where there are many small places kept by some gardener who looks after several of them, there would be an improvement in the gardens if they were looked after, in the busy season by some skilled gardener, who may not have the strength to do more strenuous work. Other opportunities for women in horticulture are in caring for school gardens and in writing on horticultural topics. There are opportunities for women to learn horticulture in private horticultural schools and in the state agricultural colleges. A school of horticulture for women exclusively is soon to be opened near Philadelphia, and students at Wellesley and Smith colleges may take horticultural courses. In conclusion, Miss Dawson warned her hearers that no woman should undertake to enter horticultural work for profit unless she has strength, health, ability and some capital.

## New York.

## A QUIET WEEK.

The past week was quiet as to business with a little more life in the market on Saturday. The rose meeting and exhibitors brought a number of well known men to the city and they took advantage of the opportunity to look in on the wholesale district. Taking the exhibition, the banquet and attending visitors, the events of the week were interesting. This week, the hustle and bustle of Easter preparations are in full swing. Authorities agree that there will be much fine stock. With good stock the next great desire is for good weather. Under favorable weather conditions we look for a record breaking business. St. Patrick's day was a great holiday with a great parade but it made no great impression on the florist trade. There were shamrocks and dyed flowers but we noted few of the latter being worn by genuine Irishmen. At the Florists' Club banquet there was a good display of flowers, but not \$10,000 worth; which is the way a local daily paper puts it.

March 21.—There is little change in the condition of the market. Everything is being held back for Easter.

## NOTES.

Alexander Trumpere, father of Wm. Trumpere, buyer for Small's New York store, died at Stapleton, S. I., on March 11. He was 84 years old and had long been a prominent resident of Staten Island.

The Easter flower show at the Prospect park greenhouses has been visited by a large number of people since the opening March 20. The show of flowering plants of all kinds is unusually good.

J. H. Small of Washington, D. C., was in the city during the week but business engagements prevented him from remaining for the exhibition.

An interesting and encouraging feature of the recent exhibition was the large attendance of local retailers. They evidently enjoyed it.

Kessler Bros., the exclusive plantmen of Twenty-eighth street, have a great stock of lilies, azaleas, daisies and other Easter plants.

## Buffalo.

## SOME GROWERS SUSPECTED OF PICKLING.

March weather in all its different varieties has been with us the past week ending with an ideal Saturday. Trade has been quiet which is always expected at this time with the exception of funeral work. The death of one of our most prominent railroad officials gave S. A. Anderson a tremendous amount of work, also W. J. Palmer & Son, both stores being in the railroad office district. Among the orders of Anderson was a blanket of violets, carnations and lily of the valley, an immense mound of lilies and Richmond, together with several other pieces of large proportions. Stock the latter part of the week was scarce, no doubt owing to the usual attempt to keep flowers too long before a holiday and perhaps losing a fair price. A little cold storage is good for some things but not too much of it for anything.

## NOTES.

Joe Sangster of the northeast side has made all arrangements for a good supply to accommodate that fast growing section which is thickly populated with flower-buying people.

B. S. Myers, superintendent at W. J. Palmer & Sons, Lancaster, says he never had a finer lot of lilies, bulb stock, azaleas and roses, with carnations plentiful.

George Asmus of Chicago was a visitor last week, full of hustle, as all

are from the big city. The national census will not be taken until George returns.

L. H. Neubeck is well prepared for Easter and Chas. Schoenhut of William street has a good lot of stock.

W. J. Peake of Broadway always has a big trade from St. Mary's and the other churches in that vicinity.

Wm. Scott Co.'s and G. F. Newlands' lilies are not as tall as they should be but other stock is fine.

W. J. Palmer and W. F. Kasting were busy in New York, the former as judge at the rose exhibition.

Schwerdt & Berner, of Forks, have their usual stock of azaleas, hyacinths, tulips, etc., in good shape.

There are several events on the calendar for next week which will keep the florists busy.

W. J. Palmer & Son and S. A. Anderson will be able to wholesale a lot of stock.

C. F. Christensen, of Eggertsville, has a fine lot of lilies and other Easter plants.

BISON.

## European Horticulture.

## FROM THE FRENCH TRADE PAPERS.

"Should fruit trees be pruned the year of planting?" is a question on which doctors disagree most vigorously. As to fruits with kernels, like the peach, opinion is almost unanimous that even planted fairly late in spring, there is an advantage in pruning the same season, i. e., the end of March. On the contrary, seed fruits like the apple and pear, are more open to discussion, and a learned French horticulturist, M. Pierre Passy, solves the question as follows: When trees have been planted under the best conditions, dug when dormant without injuring the roots, planted October to January in well-prepared and enriched soil, they may well be pruned at the end of March. The trees will not suffer and a year will have been gained in their development. When, however, for any reason, conditions have been unfavorable, planting late, rootlets dried, maimed or frosted, or the soil badly prepared, only a slight shortening of the branches should be undertaken, though by this process a year's development be lost. A second objection to the non-pruning system is that the young trees sometimes begin to bear too early and so sap their vitality.

The Haarlem Flower Show.—The exposition which will take place at Haarlem this spring is one of peculiar interest. It celebrates the fiftieth anniversary of the General Society of Bulb Growers; the grounds have been furnished by the city of Haarlem, near the wonderful Haarlem wood, the trees of which are unrivalled in all Europe. Through August and September last, nurserymen of Boskoop, Naarden, Alameer and other centers, were busy making their plantations, some quite formal others in landscape style. Bulbs to the number of one million have been planted and will make a continuous and interesting show for weeks. No florist or plant lover who will be in Europe in April and May should miss this opportunity.

Hellanthus Daniel Dewar is a variety of *H. multiflora*, stiff, stalked, more branching than the type, bushy, three to four feet in height; leaves alternate, rather far apart; flower stalks one to two feet long, bearing terminal flowers three to four inches in diameter, bright yellow in color with wavy pointed petals. Begins to bloom in July or August, and continues until frost. Both for habit and bloom this is the best of all the *hellanthuses*.

*Populus lasiocarpa* is a new member of the poplar family, from central China, and a very showy one. It attains from 12 to 35 feet, and its leaves, heart shaped, 9 to 12 inches broad by 16 inches long, are brilliant green, while the stem, the median and other principal veins are of a superb red. It promises to be a most effective plant for landscape work, it being singularly ornamental, especially as single specimens.

The new hardy carnation, Countess Knuth, a Danish novelty, should be a great acquisition. It has pure yellow flowers two to 2½ inches in diameter, borne on stems two feet in length; quite hardy, and unsurpassed in freedom and season of bloom. Planted out in the fall one foot apart, the young cuttings bloom the first year and give a marvelous quantity of bloom the second.

To keep lilac flowers, which have been forced, it is important that they do not pass the night in a room which has been heated during the day. If at night the sprays are separated, the stems cut and placed in slightly salted water in a cool place, the flowers may be kept in good condition for a week or more.

Phoenix Roebeleni.—This is the most delicately graceful of the palms that are suited for rooms; its charming, finely cut foliage and its exceedingly dwarf habit adapt it for use in small apartments while, even in the greenhouse, good specimens seem never to attain to more than four feet in height.

A Double Hardy Aster.—The first double hardy aster, Beauty of Colwall, is an English novelty. The flowers are entirely double, with no yellow disk whatever, and of a pretty mauve blue shade. Any desirable new September and October blooming perennial is sure of a welcome.

Sidalcea Rosy Gem.—This is a hardy perennial which merits a place in the border or landscape garden. It grows about four feet high, bearing abundant spikes of rich bright pink flowers, showy in the garden and well adapted for cutting.

New Rose Aviateur Bleriot.—(hybrid Wichuriana). Flowers saffron yellow, center golden yellow, medium size, double. Very strong climber, shining dark green foliage, flowers in corymbs. The best yellow of this class.

Rose Jonkheer J. L. Mock.—The new Dutch rose, Jonkheer J. L. Mock, continues to make a sensation in its native land. This rose, which in many respects resembles La France, has received several medals and certificates.

Philadelphus Lemoinei Etolle Rose has small, fine foliage and flowers in panicles at the tips of the branches, large petals elongated, purplish pink at the base, fading toward the center of the flower. Delicately fragrant.

Viburnum utile is a very early blooming member of this large family. The foliage is lustrous, dark green; the flowers are pure white, abundantly produced, and the plant very graceful in appearance.

Viburnum Henryi, especially grown for its prodigality of coral-colored berries, is very ornamental. Its shining green, lanceolate leaves are very strikingly marked along the middle vein with yellow.

Rose, White Cecile Brunner.—(polyantha.) A sport of Cecile Brunner, retaining all its good qualities. Pure white, chamois and sulphur yellow flowers are found on the same plant.

Madame Joseph Gouleau.—(hybrid tea.) A sport of La France of 89, which, instead of vermillion, is the most beautiful white. Said to be one of the most important novelties.

## TRADE GOOD.

Trade has been good the past week in many lines. The weather has been favorable and stock has come in freely. Violets are falling off rapidly. Carnations are evidently being held back somewhat as they were plentiful the early part of the week but quite the reverse the latter part. Roses are plentiful, the only shortage being in the best grades. Killarney, Maryland and Chataenay are all coming with better stems and color. Beauties are off and the outlook is bad for Easter. There is an abundance of high grade sweet peas coming in, and they sell on sight. Snapdragon is at its best now and sells fairly well. Easter lilies have been plentiful to date. Quite a few of the growers will be a little late for the Easter trade. The demand for small flowers, such as pansies, primroses, anemone, myosotis, etc., is very strong. Mignonette is selling well. Gardenias are coming in freely and are of superior quality. Valley is plentiful enough to meet all demands. The market in cattleyas is somewhat limited and the crop seems to be off with the local growers. The plant trade is strong.

## NOTES.

The recent death of Edward Hatch is a personal loss to all his host of friends. For many years Mr. Hatch has been closely identified with the gardeners and florists of this city and vicinity and while not strictly in the trade himself he was always regarded as one of them at the various gatherings he so often attended. His health has been poor for some time and the end was not wholly unexpected. He was buried quietly from his late residence on Tuesday last.

A visit to the wholesalers found everything in readiness for the big rush. Special attention is being given this year to the handling of flowering plants. Orders in many cases are to be shipped direct from the growers.

James Petros of Casey's "Rosary" is confined in the city hospital. He is suffering from a rupture and is expected to leave the hospital in about two weeks' time. Mr. Petros has the sincere sympathy of the trade.

The J. A. Budlong Sons Co. is getting back to the old form again as Easter approaches. Chataenay, My Maryland and Killarney are showing a remarkable improvement over a few weeks ago.

H. Arnold of the Galvin forces made a brief trip to New York this week. He found things more quiet there than here but all hands were anticipating a lively Easter trade.

Lester Mann is bringing in some good Lillium candidum. Not many of these have been grown of recent years but they seem to be in good demand.

C. P. Owens has resigned his position with R. McGorum and accepted a position in the retail store of Mrs. J. W. Rogers on Summer street.

The regular monthly meeting of the Gardeners' and Florists' Club is postponed for a week owing to the hall being previously engaged.

John Newman of Woburn has been bringing in upwards of 30,000 violets daily for the past few weeks and disposing of them readily.

Thomas Curran died of heart failure suddenly last Sunday. He was employed by F. E. Hanly of Brookline.

W. M. Walsh, of Woods Hole, is sending out some ramblers roses that would be hard to beat.

Pierce Bros. are bringing in some fine mignonette, the first of a new crop. R.

Trade has been exceptionally good. Funeral work has kept nearly everyone working overtime. The fine spring weather which we have been having has put the world, at least so far as this city is concerned, in the best of spirits, and a liberal amount has been spent for flowers.

NOTES.

Owing to the efforts of Secretary Baur, of the State Florists' Association, the annual state fair is going to be an event of importance to florists from now on. He has succeeded in getting the state fair board in the proper sort of notion as regards to premiums. However, the board seemed very willing to adjust the matter and were very glad to receive the capable advice of Adolph Baur.

Bertermann Bros. Co. entertained the public at the East Washington street greenhouses last Sunday with the large Easter display. Irwin Bertermann is working on a device to prevent the skidding of automobiles.

The Indianapolis Plant and Flower Co. has started the scheme of replacing all its old wooden benches with cement ones, and as soon as a bench becomes shaky the cement is installed.

The market men have again agreed to keep the price of geraniums at \$1.50, but in some mysterious way the geraniums will be sold for \$1 in a couple of weeks.

Roepke-Rieman Co. is no doubt leading in the line of sweet peas. This firm also has a large line of bedding plants which are developing nicely.

Smith & Young want to add 5,000 square feet for smilax and Asparagus Sprengeri to meet the ever-increasing demand for green.

The Hukriede Floral Co. has a fine lot of daffodils and will be able to cut several thousand of them for Easter.

John Grande, as usual, has a fine lot of Easter lilies. His tulips are also attracting favorable attention.

Henry W. Rieman is still leading in the line of cypripediums. They are in crop now and are fine.

John Rieman has installed the Tungstolier lights throughout his store.  
A. W. B.

BROOKLAND, D. C.—A lecture in the interest of landscape gardening, illustrated with stereopticon views, was delivered March 8, by Prof. L. C. Corbett, of the Department of Agriculture, in the lecture room of the Baptist church. Prof. Corbett described modes of planting flower gardens so as to bring out the most attractive color schemes in the plants and explained at some length the botanical characteristics of the better known garden flowers.

One of the notable funeral pieces made in this section lately was a handsome 7-foot standing cross, ordered by the state legislature for the funeral of Thomas C. Platt, formerly United States senator from this state. The funeral was held at Oswego, March 9, and was attended by committees representing the two branches of the legislature, and by prominent leaders in the republican party. The cross was made by Eyres of cattleyas and Coelogyne cristata, and was a handsome piece of work. President and Mrs. Taft sent a wreath of hyacinths; Senator and Mrs. Chauncey M. Depew, orchids and lilies; the Amen Corner, violets and gardenias; the republican state committee, a wreath of roses, and the New York state congressional delegation, a blanket of roses.

TRADE FAIR.

The condition of the cut flower market is very satisfactory; prices remain firm and buyers have been more active than at any time since the beginning of Lent. The wholesale houses sell out clean every day and the question is, "What are you going to have Easter?" By the time this letter appears the Easter rush will nearly be over and here is hoping that everybody does a record breaking business. From present indications everything points to the biggest and best ever. Flowers are coming along in nice shape. The quality is all that can be desired and we never handled better and cleaner stock. Another commendable feature is the fact that local growers are not holding back stock. However we do not know what the out-of-town growers are doing for there was not much stock shipped into the city the past week which undoubtedly is a sign that pickling is in process somewhere.

## NOTES.

Charles Dudley, of J. W. Dudley & Sons, of Parkersburg, W. Va., was in the city last Friday calling on the trade. He is selling some of those hydrangeas for which his firm is noted and is very successful in having them in bloom for Easter no matter whether the date is early or late. Having disposed of two carloads in Washington, D. C.—and he states that every florist he called on gave him an order—the four houses he has in bloom are nearly sold out.

James B. Allan, of the firm of George & Allan, received the appointment as city nurseryman from the park commissioners the past week. The park commissioners are to be congratulated upon securing the services of a man with Mr. Allan's ability and there is no question of Jimmie's making good.

J. A. Peterson is spending a week or 10 days at French Lick Springs, where he went to recuperate, being all run down from a strenuous season's business and he writes that he is getting along fine and will be back in time to get into business again for the Easter rush.

Burglars entered the store of A. Sunderbruch's Sons Thursday night but were frightened away before securing much booty. Two hundred stamps and a few lead pencils were reported missing and the hinges on the safe were damaged.

Wm. Speck, of Newport, Ernst Mack of Price Hill, and George & Allen, Hyde Park, will have a nice lot of Easter lilies but refuse to take any more orders for same as they

claim to be pretty well ordered up.

Gus Adrian, Clifton, has about the nicest collection of flowering plants about the city, including azaleas, rhododendrons, and bulbous stock in pans.

G. Brunner's Sons have a nice house of hybrid roses which will be just right for Easter.

Tom Windram has ordered an automobile.

WILKESBARRE, PA.—Mrs. Herbert's handsome new store, The Fernery, was opened March 10. The room has been finished in green and white, and a fine display of both cut flowers and plants was made. Souvenirs were given to all visitors on the opening day.

## The Seed Trade.

### American Seed Trade Association.

J. C. Robinson, Waterloo, Neb., Pres.; M. H. Duryea, New York, First Vice-Pres.; F. W. Boligiano, Washington, D.C., Second Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas.; Leonard H. Vaughan, Chicago, Asst. Sec'y. Twenty-eighth annual convention, at Atlantic City, N. J. June 21, 1910.

TIMOTHY seed advanced 40 cents this week.

ONION SETS at Chicago were lower in price this week, yellows being particularly weak.

SANTA ROSA, CALIF.—Luther Burbank, who has been away for some time on a lecturing tour, returned March 19.

SEED TRADE, both mail and counter, continues good generally. The rush is on in earnest and the weather seasonable. Rain is needed.

CHICAGO.—Contract prices on the board of trade March 23 for grass seed were noted as follows: Timothy, \$4.60 nominal. White clover, from 20 cents to 25 cents.—Visitor: A. L. Rogers, of Rogers Bros. Seed Co., Alpena, Mich.

FRENCH BULB crop reports of March 10 tell us that the dry weather still continues, with high winds. It is reported that the syndicate of growers at the annual meeting April 16 will decide on wholesale prices for the year.

ROCHESTER, N. Y.—James Vick's Sons say business thus far surpasses that of any previous season for many years past. During the first three weeks of March wholesale orders advanced 32½ per cent over any similar previous period in the history of the concern.

THE Department of Agriculture has declared war against salesmen who have been selling sorghum seed to unsuspecting farmers in the south, declaring it to be a new variety of wheat that yields 400 bushels to the acre. They have also been disposing of sorghum seed by labeling it "ribbon" cane, or sugar cane, of a new and decidedly improved kind.

THE tariff committee on bulbs made an error in not giving the botanical names with the common names as it is now reported that the customs collectors are charging Dutch hyacinth rates on Hyacinthus candicans and grape hyacinths which should come under the head of "bulbs not otherwise specified."

## Braslan Seed Growers Co.

Lettuce, Onion, Sweet Peas,  
Growers for the Wholesale  
Trade Only.

**SAN JOSE, CALIF.**

SANTA BARBARA, CALIF., March 16.—We have just had a half inch of rain, the first since Christmas; it has done lots of good.—C.

### Dutch Bulb Trade.

According to a recently-issued British consular report, the trade in Dutch bulbs continues to increase. There are in Holland 10,000 acres of bulb farms, producing yearly some 15,000 tons of bulbs for export. Nearly half of this goes to the United Kingdom. It is remarkable that the Dutch thus maintain their supremacy, and can still produce better bulbs than English florists. Some attribute this to the peculiarity of the soil of Holland, and the bulb farms are mostly on an area between Leyden and Haarlem, recently reclaimed from the sea. The lily bulb trade, however, has passed almost entirely to Spain.

### Congressional Free Seeds.

The Practical Farmer prints the following letter an Ohio man wrote to his congressman who "favored" him with some packets of congressional seeds. It states the case as well as we have ever seen it stated:

"Thank you for the courtesy and good intention evident, but I don't want them. I have a reliable dealer who supplies me annually with such seeds as I require and he does not expect my continued trade unless he supplies good seeds. Hence he sends me only good seeds, true to name, and just such varieties as suit my needs. I note that of these five papers you have sent to me, none are claimed to be anything but old standard sorts. I wish to call to your attention the fact that this free seed distribution was originally intended to place in the hands of the farmer new or improved varieties whose success or failure was desired reported to the secretary of agriculture. Now I ask you, why you ask me to report the results of these poor, unfathered seeds' growth, whose origin a 'congressional investigation' could not determine? Can you tell who raised these seeds? Do you think it any more fair to distribute poor garden seeds free, than it would be to send out to the voters in your district any other class of merchandise in return for a support which you must have to enable you to stay where you are? Do you think I can afford to plant seed of doubtful origin? I cannot. The cost of dependable ones is trifling. Do you think we can afford to pay the bill of sending thousands of tons of free matter through the mails at a cost 200 per cent greater than

our avaricious express companies would handle it? We cannot, and unless you get busy in giving us a parcels post, postal savings bank, and redeeming some of the pledges which our president is insisting upon, we may give another your opportunity. I ask you, in case you have any defense to make of this free seed graft, to give it to us. If not, kill it at once. If you consider this package of garden seeds has any value, please send stamps and I will return them. Possibly you can use them in your own garden."

We hope more who receive free seeds will do likewise.

### Non-Guaranty.

A prominent seedsman in some recent correspondence justifies the non-guaranty of seeds, plants and trees by seedsmen and nurserymen as follows:

"If the seedsman is open to a lawsuit and the complainant testifies that all the conditions were ideal for the seed and yet he got no crop, how can the seedsman who has never seen the soil or its conditions defend himself without any opportunity for introducing first-hand evidence in his defense?

"Further; you know that a tree, fresh and alive with fine fibrous roots, may be unpacked, opened and exposed to the air and sunshine for three hours and thus have all its fine fibrous roots killed. How can a nurseryman prove, in case he is sued for damages, the facts of this careless exposure and ruin by the purchaser?

"If you think a little further along these lines, you will find that it is impossible for the seedsman and nurseryman to do anything further than sell the seeds, trees and shrubs on the basis that if they are not accepted when they are received and examined they must be returned at once and money refunded."

### Imports.

During the week ending March 12 imports were received at New York as follows:

Peter Henderson & Co., 5 bags seed.  
H. Frank Darrow, 20 packages seed.  
Yokohama Nursery Co., 64 cases bulbs.

J. M. Thorburn & Co., 4 barrels, 4 bags, 5 packages seed.

F. B. Vandegrift & Co., 11 cases palm seed.

Vaughan's Seed Store, 1 case plants, 3 bags seed.

To others: 5 cases trees and shrubs, 2 packages bulbs, 138 cases, 2 baskets plants, 1,415 bags, 5 cases, 163 packages seed, 2 bags grass seed.

During the week ending March 19 imports were received at New York as follows:

H. Frank Darrow, 30 cases trees and shrubs, 19 cases plants.

Wm. Elliott & Sons, 32 cases trees.  
Evergreen Nurseries, 54 packages trees.

Fruit Auction Co., 3 cases trees.  
McHutchison & Co., 311 cases, 2 bundles shrubs and trees, 28 cases plants.

J. M. Thorburn & Co., 10 cases trees, 9 cases plants.

Vaughan's Seed Store, 33 cases trees.  
Wadley & Smythe, 227 packages trees.

Yokohama Nursery Co., 49 cases roots.

To others: 808 bags, 753 sacks seed, 50 bags grass seed, 53 bags clover seed, 92 bags alfalfa seed, 978 cases, 228 packages, 2 bales trees and shrubs, 161 cases, 11 boxes plants, 3 cases bulbs, 122 bundles cuttings.

## Market Gardeners

### Greenhouse Vegetable Growers and Market Gardeners' Association.

C. W. Waid, New Carlisle, Pa., President; Franklin DeKleine, Grand Rapids, Mich., Vice-President; S. W. Severance, 508 Illinois Life Building, Louisville, Ky., Secretary; M. L. Ruetenik, Cleveland, O., Treas.

AN interesting talk for market gardeners, entitled "Fertilizers: How to Make and Apply Them," was given at the meeting of the Buffalo Society of Natural Sciences by Professor Geo. W. Cavanaugh, of the New York State College of Agriculture, March 12.

WASHINGTON, ARK. — The Truck Growers' Association met here March 12 and elected J. H. Bradford as president, all the other officers being re-elected. About 35 acres were reported planted in potatoes, and it was agreed to plant 15 or 20 acres in sunflowers.

FIRE, supposed to be of incendiary origin, destroyed two barns and a greenhouse with their contents for Delbert Miller, of Espy, Pa. This is the second fire Mr. Miller has suffered from in a few months. The loss is stated to be about \$3,000, with only \$1,000 insurance.

### Prices of Indoor Fruits and Vegetables.

New York, March 19.—Mushrooms, 30 cents to 50 cents per pound; cucumbers, \$1 to \$2.50 per dozen; lettuce, 87 cents to \$1.12 per dozen heads; tomatoes, 35 cents per pound; radishes, 3 cents per bunch; asparagus, white, \$6.50 per dozen bunches, green, \$5.50 to \$11 per dozen bunches; rhubarb, 6 cents per bunch; mint, \$1 per dozen bunches; grapes, Gros Colman, 85 cents per pound; peaches, \$2 per dozen.

Chicago, March 23.—Mushrooms, 25 cents to 60 cents per pound; cucumbers, \$1.25 to \$1.50 per dozen; leaf lettuce, 40 cents per box; head lettuce, Florida, \$3.50 per hamper, Louisiana, \$5 and \$7 per barrel; tomatoes, 20 cents per pound; radishes, 50 cents per dozen; asparagus, 25 cents to 40 cents per bunch; grapes, Gros Colman, 75 cents per pound; rhubarb, 60 cents.

### Early Onions in the Southwest.

The work of the Arizona, New Mexico, and Texas experiment stations has shown that the raising of onions, particularly for the early market, may be made extremely profitable in certain parts of the southwestern United States. In warm valleys, where the winter conditions are favorable to growth and with proper methods of culture, fertilizing, and irrigation, large yields of very early onions can be produced which command high prices both in local markets and when shipped to distant markets.

E. L. Crane and R. H. Forbes, in a recent bulletin of the Arizona Experiment Station, state that onions are very successfully grown as a winter crop in the warmer southwestern valleys. "Planted at the close of hot weather, the crop grows during the cool months when labor is most effective, and early varieties mature in time for high prices in mining and coast towns." The New Mexico station has obtained yields of over 60,000 pounds per acre of early onions at a cost of production not exceeding \$125 per acre, but such yields were exceptional, about one-half this quantity being more common. As high as 27,000

pounds per acre were obtained at the Texas substation at Beeville. The Arizona station gives eight tons per acre as a common yield in that region, with a cost of production of about \$170 per acre.

The profits depend not only on skill in growing and yield, but also upon prices and marketing facilities. In 1907, with a good yield and prices ranging from two to five cents a pound delivered at Yuma, 1.2 acres of White Bermudas netted about \$400 after deducting all costs, including labor. In 1908, with increased costs and decreased yields due to onion thrips and mildew, with a late season, demoralized markets, and poor shipping arrangements, the crop was grown at a loss.

The lighter loam soils are considered preferable for onion culture on account of the greater ease and less cost of preparing the soil and cultivating and harvesting the crop. The soil should be abundantly supplied with organic matter, which may be chiefly added in the form of well-rotted barnyard manure. Soils containing much alkali should not be chosen, especially if ridge culture is followed, because this system of culture favors a surface accumulation of soluble salts around the plants. Flat culture with flood irrigation or ridge culture with furrow irrigation may be followed. The flooding method is more applicable to heavy soils, but ridges and furrow irrigation are preferable for light soils which work easily and sub-irrigate readily.

For ridge and furrow culture the field should be perfectly level and laid off for rows from 100 to 500 feet long. This arrangement will permit of equal and sufficient irrigations without loss of water or flooding the rows. Just before planting time the ground is again irrigated, and when sufficiently dry is disc and drag harrowed to secure perfect surface pulverization. To fertilize the field open out double furrows 30 inches apart, throwing the two furrow slices in opposite directions and manuring to a depth of four inches in the furrows. Then plow in to form ridges over the manure. These ridges may be conveniently finished by dragging them lengthwise with a long weighted plank drawn by a horse. This will leave flat-topped ridges about 24 inches wide on top, with furrows about six inches wide and deep between. Thus prepared the soil may be more easily kept in tilth and weeds controlled, than in flat culture.

The best and cheapest method is to sow the seed in beds and transplant later to the field. As soon as hot weather abates (usually in September), the seed is thickly sown in drills five inches apart in beds of well fertilized soil. The water furrows must be placed at intervals suitable for subirrigation. Two pounds of seed thus planted will provide young onions enough for an acre. If the soil is moist when the seed is planted, the seedlings should begin to appear in about nine days. An irrigation will then bring the whole stand up quickly, and with proper irrigation and cultivation thereafter the young onions will be as large as slate pencils in nine or ten weeks and ready to transplant, usually in December. It is very important that the seed should be fresh.

The ridges having been prepared just in advance of planting, the young onions are lifted as needed, the roots trimmed to about an inch in length, and the tops cut back about half. The rows are best laid out along the ridges by means of Crane's marker. This is a round cottonwood log two feet long and 10 to 12 inches in diameter, with three rows nine inches apart of pegs extending around the roller. The pegs should be about 1½ inches long and spaced at four to six inches, according to distance desired between onions. By

## VEGETABLE PLANTS.

Cabbage, Wakefield and Succession, \$1.50 per 1000. Parsley, 25c per 100; \$1.25 per 1000. Lettuce, Big Boston, Boston Market, Grand Rapids, \$1.00 per 1000. Beet plants, \$1.25 per 1000.

—Cash with order.—

R. VINCENT, Jr. & SONS CO., White Marsh Md.

means of a light frame tacked to the ends of the roller the marker is drawn along the ridge, leaving three perfectly uniform rows of holes. The trimmed plants are then dropped one at each hole, set about 1½ inches deep, and the soil firmly pressed about them by hand. It is then well to irrigate them lightly to insure an even start of all the plants. By this plan about 120,000 onions an acre may be placed, planting five inches apart in the row, with three rows to each ridge.

If the ground has been well prepared and ridges and furrows carefully constructed, the labor of irrigating and cultivating onions is not excessive. For the sandy loam of the Yuma trial ground about 15 irrigations are required from September to April in seed beds and field. Irrigation should be followed by cultivation both in furrows and on ridges to kill weeds, lessen evaporation of soil moisture, and break up the salty crust which in most arid

## VAUGHAN'S SEED STORE,

25 Barclay St., NEW YORK.

84-86 Randolph St. and 202 W. Randolph St., CHICAGO.

"Spring Book for Florists." Ask for it.

soils tends to form on interirrigated ridges. In order to reach the early markets in April and May it is essential, planting seed in September, to use the earliest varieties of onions, inasmuch as they require between seven and eight months, including the winter season, to mature.

The Arizona station has found White Bermuda the most successful variety at Yuma, although Red Bermuda and Crystal White Wax have also given good results. These are all mild early onions and good producers, but must be sold promptly, as they do not keep long. The superior appearance of Crystal White Wax brings it a somewhat higher price than the Bermudas, compared with which, however, this variety is a little later and a poorer keeper. New White Queen produced a good test crop of large late onions in 1906. El Paso and Prizetaker are very uncertain yielders under Colorado valley conditions, while Louisiana Creole and Australian Brown have thus far produced tops only and no onions. At higher elevations, however, near Tucson and in Graham county, Australian Brown is a good producer and keeper.

The White and Red Bermudas were grown with success at the Texas sta-

tion. The New Mexico station found Early White Queen, Barletta, White Bermuda, and Extra Early White Pearl quite satisfactory for early ripening. They are mild onions of good keeping quality. Red Victoria gave the best yield on unfertilized soil at this station. In the Arizona experiments downy mildew often proved troublesome, but was held in check by spraying with Bordeaux mixture as soon as the mildew appeared. Thrips frequently caused considerable damage, but was controlled by spraying with strong kerosene emulsion.

As the onions attain marketable size, maturity may be hastened by withholding irrigating water and drying out the soil. To the same end the tops may be broken over by means of a small roller. By these means three weeks may be gained in the time of ripening. The lessened yield will usually be more than made up by higher prices for an earlier crop.

Next to transplanting and cultivation, harvesting is the most costly item in connection with the crop. Flat culture onions are most costly to harvest, requiring the aid of a digging tool, especially in adobe soil. Ridge culture onions, however, if the soil is

light and has been kept mellow by cultivation, may be pulled by hand, and tops and roots trimmed with a sharp knife in one operation. The trimmed onions are collected in small piles, covered lightly with grass or weeds to prevent sunburn, and left a few days to cure. If to be kept for some time, they must then be stored in thin layers or crates in a cool, shaded, well-ventilated place. Sacks are a cheap market package, costing five to 10 cents for 105 pounds; but sacks allow the onions to bruise. Fifty-pound onion crates, costing 14 to 25 cents each in Arizona, are more convenient to handle, insure better keeping, and are usually demanded by the trade.

FREMONT, MICH.—The spring session of the State Horticultural Society opened here March 12 at the auditorium. C. B. Welsh, of Douglas, C. E. Bassett, of Fennville, and Professor H. J. Eustace, of Lansing, together with T. A. Farrant of Eaton Rapids and Edward Hutchins, of Fennville, spoke on the use of lime sulphur sprays, the discussion taking the greater part of the day.

## The Nursery Trade

### American Association of Nurserymen.

F. H. Stannard, Ottawa, Kans., President;  
W. P. Stark, Louisiana, Mo., Vice-President;  
John Hall, Rochester, N. Y., Sec'y.  
Thirty-fifth annual convention to be held  
at Denver, Colo., June 8-10, 1910.

ABRAHAM DEAN HARTLEY, landscape gardener of Pittsburg, Pa., died at his home, Woodlawn avenue, Bellevue, at the age of 73. He was a native of England and came to this country in 1867 settling in Philadelphia but later coming to Pittsburg.

### Among the Newer Deutzias.

The beauty and grace of the older deutzias ensured them a place in nearly all gardens where flowering shrubs are appreciated. Perhaps the most popular group for outdoor cultivation is the ever useful *D. crenata* and its varieties, which rank among the prettiest of flowering shrubs for border and shrubbery plantings. For greenhouse and conservatory adornment the well-known *D. gracilis* and its varied forms have long held the field, being decidedly light and graceful in contour, very floriferous, and readily amenable to gentle forcing. It would be extremely difficult to compute the number of the *gracilis* section which are grown for indoor decoration, but it must be exceedingly large.

The discolor group provides very good decorative subjects, and the newer hybrid varieties are especially noteworthy. As regards outdoor culture the majority of the deutzias will thrive admirably in the southern portions of the country, but in the colder north, only the hardier types should be attempted outside, such typical forms as *D. crenata* and the strong growing *D. scabra* doing fairly well with a little shelter.

Where one can plant deutzias, with the knowledge that they will do well, then informal groupings in the grass, or on an open bank in the wild garden should be the aim. Even well-grown single specimens look charming isolated on the lawns, and some of the newer forms will prove of great value. It may be of interest to the reader to know something of the newer hybrids, especially as they are so charmingly adapted for widespread culture, and may maintain the future popularity of the race.

Taking *D. crenata* first, one notes the delightful *D. candidissima flore plena*, a fine, graceful, pure white subject. Pride of Rochester, a grand pure double white, extremely well adapted for forcing; *Rosea flore plena*, a notable form, with rosy markings upon the white blossoms; and *Watereri*, the fine single white.

Fine progress is being made in the *D. discolor* group. The fine form, *D. discolor major*, which was introduced by Messrs. Veitch from Central China, has been followed by a charming series of hybrids from Messrs. Lemoine, of Nancy. *D. discolor grandiflora* is a fine seedling from *D. discolor purpurascens*, which was crossed with *D. gracilis*. It is of dwarf habit, with

## LEGAL NOTES.

## An Injunction Granted.

The plaintiff in the action Thorpe v. Hall, a corn and seed merchant, of Birmingham, moved on Friday last, before Mr. Justice Neville, in the chancery division of the high court, for an interim injunction to restrain the defendant, until the trial or further order, from selling certain peas grown by him from the plaintiff's seed. Mr. Maxwell Thin, in support of the motion, said the injunction asked for was to restrain the defendant, his servants or agents from selling, offering for sale, disposing of, or otherwise dealing in or parting with certain pea seed known as Bellthorpe's Prolific. By an agreement of February 10, 1906, the plaintiff supplied the defendant with seven quarts of pea seed to be grown at his farm at Bloxham, and delivered to the plaintiff's order at Banbury station. The plaintiff had specialized a pea, which he called Bellthorpe's Prolific, and the agreement provided for the defendant growing seven quarts of those peas on his land, and for the plaintiff purchasing the crop at a certain price. The plaintiff alleged that the defendant had not rendered to him the whole quantity grown, but had retained 10 quarts for his own use. These he had sown, and from them had now on his farm three stacks of these peas. It was very important to the plaintiff that the peas should not be sold to anyone else, for, having acquired a reputation for Bellthorpe's Prolific, anyone else selling the same peas would materially damage his business.

Mr. Northcote, for the defendant, said the season of 1907, being a bad one for peas, it was agreed that the defendant should retain some of the peas and sow them the next year, and this he did. His Lordship said it seemed to him that there was no sale of the peas to the defendant, but that they were merely handed to him for a special purpose. Whatever the rights of the parties were at the trial, he should have to grant an injunction if the defendant did not give an undertaking. After some discussion, Mr. Northcote undertook not to part with the peas to anyone but the plaintiff until the trial, on the plaintiff giving an undertaking in damages. This the plaintiff assented to, and no order was made upon the motion, except that costs should be costs in the action.—Gardeners' Chronicle.

## Poisonous Tomatoes.

Our old familiar friend the tomato is under suspicion again. When it first obtained a place in cultivation it was under the guise of an ornamental plant named love apple. As such it was regarded as deadly poisonous and its relationship to the nightshades gave color to the belief. Sooner or later, however, it was found to be edible and thereupon it was transferred to the garden where it has since remained as a highly prized fruit. Its harmful characteristics always have been more or less hinted at, however, and but a short time ago tomatoes were reputed to cause cancer. Of course this was all nonsense, but there seems more truth in the charge that is now being made by various physicians to the effect that some kinds of tomatoes are likely to cause heart trouble. Since all people are not affected alike it seems still to be a question whether all tomatoes are harmful or whether only a few per-

sons are susceptible. It is well known that the luscious strawberry appears to be poisonous to some people, but that does not prevent the rest of us from indulging in strawberry shortcake. The harm in the tomato is laid to "lycopersic acid," whatever that may be. It is supposed to be most abundant in tomatoes that have been picked green and ripened on the way to market and the moral of all this is that one should eat only fresh tomatoes, and the inference that he should grow them himself. If the fact that some people's hearts are affected by stale tomatoes induces every man to make a garden, we shall welcome the discovery of "lycopersic acid."—American Botanist.

PHILADELPHIA, PA.—Flower vendors of all classes, those selling the green carnations which are plentiful on St. Patrick's day, and those with the modest little violet in bunches, were arraigned in City hall March 17 on charges of disorderly conduct. Market street, from Second to Thirteenth, was cleared of the flower vendors after numerous complaints had been made to the police department in regard to their persistent methods of selling. It was declared that they would single out a prospective victim and follow him for a square with their cries of "buy a bunch of violets, mister." "Get a green carnation on St. Patrick's day. You're Irish, ain't you; get a green one," until the one solicited appealed frantically to the police.

SAMUEL COCKBURN & SONS,  
233rd St. and Verio Ave., Woodlawn,  
NEW YORK CITY.

LEWISTON, ME.—Ernst Saunders will soon begin the erection of another greenhouse, 200 feet long, at his plant on Upper Main street.

PORTLAND, ME.—The retailers are making great preparations for Easter and fine displays of plants in their windows. The prospects are good for a large trade for plants and flowers.

BERKELEY, CALIF.—The Gardening Association will give a flower show in this city some time during April. F. H. Meyer has been named chairman of a committee to formulate plans for such a show. The committee having charge of the distribution of seeds reports that 11,000 packages were sold to school children. They are to be planted at the homes of the children, while others were distributed for planting in the school yards.

## VAUGHAN'S SEED STORE,

NEW YORK.

All Plants f. o. b. Western Springs, Ill.

CHICAGO.

WESTERLY, R. I.—Conrad S. Schultz, who has been proprietor of the Elm street greenhouses for the past two years, has taken possession and is now operating the four large Smith greenhouses on Franklin street. The Smith houses are 25x120 feet and are practically new. The houses will be devoted to the raising of carnations and are now fully stocked with a fancy assortment of this flower.

BATAVIA, N. Y.—W. W. Stroh, of Buffalo, now with W. J. Palmer & Son, and his brother, Albert L. Stroh, will become associated with their father, Louis C. Stroh, under the firm name of L. C. Stroh & Sons, and begin the

erection at once of two greenhouses, 70x150 feet, at the junction of South Main and River streets. It is hoped to get the greenhouses ready for business early in the summer. The firm expects to engage in the wholesale and retail trade. Louis C. Stroh years ago lived here, being employed as a cooper. Afterward he moved to Attica, returning six years ago and buying the property where the greenhouses are now to be erected and putting up a dwelling.

WASHINGTON, D. C.—F. H. Kramer used a page for his advertisement in last Sunday's Times and about half a page in the Star of the same date.

**BYER BROS.**, Chambersburg, Pa.

Baltimore.

Weather seasonable, suns bright, all kinds of stock in cut flowers flourishing. Some Easter stock, supposed a few days ago to be short, will more than fill all demands. Roses are good and quite sufficient for calls; carnations have slackened off and there will be no Easter glut. Some of those coming in today show signs of having been rather retarded on their way. Valley will supply all inquiries, and hyacinths and tulips, narcissus, etc., will be very abundant. Plants of all sorts are abundant.

The Gardeners' Club, organized for the new year by electing the following officers: George Morrison, president; Wm. Christies, vice-president; N. F. Flitton, secretary; George Talbott, financial secretary; Fredk. G. Burger, treasurer. The membership of the club is on the increase and interest grows, it is said, in its operations. At the banquet held after the meeting, the dining hall was tastefully decorated with growing plants, and the tables carried large vases of fine carnations. Robert L. Graham presided at the dinner and called upon the speakers, all of whom urged the advantage and policy of increasing the number of members and the co-operation of all interested in floricultural interests. Mr. Morrison, the new president, is the gardener at Upland's, the country place of Mr. Jacobs, and recognized as an experienced rosarian and thorough all-around gardener.

Quite an animated campaign is being arranged for the improvement of the appearance of the back yards of the residences of the city, and the Municipal Art society is urging the adoption of more window and porch boxes to improve the effect of the fronts of city houses. If both these features of advanced taste are followed up the gain to the looks of the city will be great. S. B.

## Mrs. C. W. Ward

Mrs. C. W. Ward is a perfectly formed flower, with full center; color, deep pink, several shades lighter than Lawson, deeper than Winsor; having strong, erect stems 24 to 36 inches in length. A vigorous, healthy grower, and has never shown disease of any kind.

Price, Rooted Cuttings:—\$2.00 per 12; \$12.00 per 100; \$100.00 per 1000; 25 at the 100 rate; 250 at the 1000 rate.

Plants from 2-inch pots, \$15.00 per 100.

## New Method of Forcing Plants.

Most plants in temperate regions, where the cold of winter is severe enough to put an end to plant growth, have learned to take a rest in winter and this habit has become so thoroughly fixed that, even when dug up and kept in a greenhouse, such plants refuse to grow until they have finished their natural dormant period. By taking the plants up early in autumn and giving them a good freezing it has been found that they begin at once to grow. Evidently the cold has something to do with the acceleration of the resting process. A few years ago, it was discovered that by exposing plants to the fumes of ether or chloroform for a short time, they would grow exactly as they would if frozen or if allowed to finish their natural period of dormancy. Recently a German, Prof. Molisch, according to a botanical journal, has written a pamphlet in which he claims that the plants can be forced as well by warmth as by cold. In the new treatment, all that is required is to immerse the shoots of the plants to be forced, in water at a temperature of 30° to 35° centigrade (about 80° or 90° of the ordinary scale) for 10-12

BRISTOL, PA.

**List of 200 Roses**

Bumper crops for spring delivery.

**THE LEEDLE FLORAL COMPANY**  
SPRINGFIELD, OHIO.

**Gladiolus Bulbs in Mixture**

First size, \$15.00 per 1000; second size \$10.00 per 1000; third size, \$8.00 per 1000; fourth size, (good planting stock) \$5.00 per 1000. This is one of the finest mixtures ever offered.

**FRANK BANNING,** Kinsman, Ohio.  
Originator of America and Niagara.

**Sympathy With the Soil.**

"Live plants. Handle with care," reads the label of the nurseryman, but did you ever think that good seeds are alive? The next time you are in a seed store take off your hat and do obeisance to those dry shelves! They contain potential, living individuals, needing but a touch of His finger who said: "I am the resurrection and the Life." These plant-babies are like our own, requiring, in proper ration, three things: moisture, air and warmth. Deprived of any one of these, the other two will only avail to destroy life. The housewife "preserves" by removing any one of the three. In the dried fruits, the moisture; in canning, the air; in refrigeration, the warmth. Proving that even the lower forms of bacterial life she would avoid; live by the same rule.

So of your garden; if so wet or solid that air can not freely enter the soil; if too cold or too dry—failure. Also this will be true of the opposite extreme, if too porous, too hot, or too wet. There must be proportion, that the struggling babe find comfort, and that his nurses, the soil-bacteria, may also thrive and provide his food.

Every secret or right soil, right season, right planting depth, the details of exposure—even most transplanting problems end in this study of "comfort" for living things. One must be sympathetic, and instinctively "feel" for them. You must see and hear their laughter and their plaints. Add but food to the three items above named and their "cup runneth over."

"But I've never had a garden in my life! What should you advice trying?" Anything—Collier's Weekly.

**CHARLES H. TOTTY, Madison, N. J.**

**JUANITA, (Wah-nee-la)** A grand scarlet **Carnation**, with about a 3½-inch flower, well built up with a two foot stem.

**Its Strong Points Are:** Abundance of large, high grade flowers at all times; stem very stiff, with good habit in every way; keeping qualities are wonderful; burst blooms are rare. We have grown it 6 years and will still grow as many as we have now. We have **never over propagated** it, so its vitality is not impaired. Cuttings will be taken from flower stems which are the best. The color is so bright and rich it takes with every one. We have a very large stock. **Price:** Rooted cuttings \$8.00 per 100; \$60.00 per 1000. Special price in large lots. Unrooted stock half price. A discount of 5% for cash.

**FRANK OECHSLIN**

4911 Quincy St. CHICAGO.  
Mention the American Florist when writing

EVANSVILLE, IND.—J. D. Carmody, who has been under the weather for some time, is out and about again. He says he didn't die because he has a grudge against the undertaker.

GOSHEN, IND.—Miss Dora Brown, of the Colonial Flower Shop, will open a retail store at Gary in the near future. Miss Brown has leased a room in the new Gem building and purchased fixtures and supplies in Chicago. Miss Brown started here three years ago and has succeeded in building up a fine trade. She will still control the Colonial, leaving Miss Ruth Cripe in charge.

**S. D. BRANT,**

**Clay Center, Kans.**

**CINCINNATI, O.**—Eight persons were seriously injured recently when a greenhouse at the Eden Park conservatories collapsed as a result of March winds. Every one of the two adults and six children who had sought shelter in the place from the wind, which amounted to a gale, suffered broken bones. Of those injured two are probably fatally hurt.

# Ammoniated Lawn Lime

**Kills Weeds.**

**Makes Grass Grow.**

Applied as a light top dressing to lawns it kills all flat leaved weeds such as Dandelion, Daisy, Plantain, Sorrel, Chickweed, Moss, etc., in 48 hours and without other fertilizer produces a wonderful, luxuriant, rich, green growth of lawn grass—which is distinctly noticeable 50 feet away.

The use of Ammoniated Lawn Lime supersedes hand weeding of lawns, putting greens, etc. It saves the grass from being pulled up and in many cases ruined. Grasses take a new vigorous growth, avoiding probable trouble in the future.

**Quantities:** If very weedy 1-lb. to 40 square feet, 25-lbs to 1000 square feet, (20x50). Half to one-quarter amount if moderately weedy.

**ABSOLUTELY GUARANTEED.** Money refunded if not satisfactory.

We want Seedsmen or Florists as agents and distributors in every important city and town.

**Retail Prices:** 2-lb. cans, 25c, 50 cans per case. 5-lb. cans 50c, 20 cans per case. Bags, 25-lbs. \$2.00; 50-lbs. \$3.50; 100-lbs. \$6.00; 1000-lbs. and over 5c per lb.

Descriptive Circular and Wholesale Prices on Request.

## Evergreen Brand Flower Fertilizer.

A Pure Plant Food immediately available. It permanently enriches the soil. It prevents the onslaught of plant diseases or insect pests. Can be used at any time during the growing season, dry or in solution. Put up in 12 pound cans, Price, \$2.00 each.

**For Sale by Leading Jobbers**

Further information can be obtained from

**D. D. JOHNSON CO.,** Manufacturers,  
64-66 Wabash Ave., CHICAGO.

## The Mastin Automatic Whitewash and Spraying Machine Is Reliable, Practical and Durable

The tank is made of galvanized sheet steel, and in brass. The pump is of brass throughout, simple and powerful. The mixing device keeps the contents of the tank well stirred up from start to finish.

When the machine is filled to within six inches of the top, a few strokes of the pump will compress enough air in the tank to produce a continuous mist-like spray for 15 minutes.

All parts are made to gauge and may be had for repairs.

Ask your dealer about our Extension Hose, Extension Rods, and the Mastin Whitewash Nozzle for Bordeaux mixture.

Sold through Seedsmen, Dealers in Florists' and Poultry Supplies.

**J. G. MASTIN & CO., 3124 West Lake St., CHICAGO, IL**

## THE ALLIED TRADES

### A Heating Question.

ED. AMERICAN FLORIST:—

As we are putting up another greenhouse, and going to have a 2½-inch main, we ask your advice as to how many 1¼-inch returns it would require. The house will be 21x100 feet. The coldest we ever have here is 15°, and that for a few nights only.

Alabama.

H. B.

It is not possible to tell how much radiation will be required in a greenhouse without knowing what temperature is desired, but supposing that 60° is required and that the 2½-inch main passes through the house so that it will be available for radiation, it will be necessary to use five 1¼-inch returns. For 50° only four returns will be required. The above estimate is for steam heat.

L. R. T.

The Lord & Burnham Co., Chicago.

The formation of a Chicago corporation in connection with the well-known firm of Lord & Burnham Co., New York, is an event of much importance. Not only is a separate corporation formed but plans are about matured for a strictly modern, up-to-date factory to be built upon a site of 15 acres which the company has secured at Desplaines, Ill., a splendid location, being only about 17 miles from the heart of Chicago, yet well outside the city limits and high labor zone. The tract of land purchased is bounded on three sides by railways, one by the Wisconsin Central another by the Chicago and North-Western and the third by a belt line belonging to the latter company. Thus switch accommodations will be easily arranged connecting with all three lines and as the railway companies have promised Chicago freight rates to the new company—a matter of two cents per 100 pounds less than the freight to Desplaines—it will certainly be in a favored position in every way.

The idea in part, in building this factory near Chicago, is to enable the firm to compete on an equal footing with other local firms in the matter of shipping and freight and thus secure its share of the commercial florists' work which the New York house has been, to some extent, held out of. Geo. Sykes, the Chicago representative of the firm, has been in treaty with the village of Desplaines regarding the making and straightening of roads, water concessions and the like and the matter has, of course, led to a great mass of correspondence and other

## The Superior Standard

RETURN FLUE FIRE BOX BOILER

contains more heating surface, and less water space than any other steel boiler.  
2/3 of the heating surface is in the tubes.

Ask the man that knows the one using different style boilers—names are yours for the asking.

After using our boiler one season, you will say like all others: Nothing but "Superior" for me.

This boiler has given better satisfaction than any other boiler on the market  
MADE IN NINE (9) SIZES FOR HOT WATER.

work. The present plans are to build a foundry, wood working and erecting shops with the necessary buildings and offices. The main office will be at the extreme end of the property—if the plans go through—816 yards away, over a straight road, from the passenger station. The buildings will all be of modern construction, fireproof and the most up-to-date woodworking and other machinery will be installed. The country to be covered by the western house under Mr. Sykes' direction, will be Ohio, Kentucky, Tennessee, Alabama, Mississippi, Indiana, Illinois, Michigan, Louisiana and all points west of Chicago, a pretty comprehensive territory.

## Steel Return Tubular Boilers

The Most Economical Type of Boiler for Greenhouse Heating. Highly recommended by well-known florists.

Glen Cove, N. Y.

The meeting of the Nassau County Horticultural Society was held in Pembroke hall, March 9 with over 30 members present, President Duthie in the chair. One application for membership was received and six new members elected, among whom were E. Stanley Brown, East Moriches and W. H. Hunt of Boddington's. We elected our first life member, Mortimer L. Shiff of Oyster Bay, and the following as honorary members: L. Tiffany, Emlin Roosevelt, M. Chandler Moore, all from Oyster Bay; A. G. Hodenpyle, Locust Valley; Colgate Hoyt, Centre Island; D. M. Munger, Glen Cove, and Congressman W. W. Cocks, of Washington, D. C. Credit is due our president for securing all those members for the society. There was also a shower of checks for our fall show. We were sure of the goods, now we are sure of the cash, which promises a most successful show. Messrs. Eccles, Robertson and McQuinn acted as judges with the following decisions: Roses, White, J. Everet. Pink, J. Everet. Any other color, G. Wilson, all three exhibits of superior merit. H. Gaut, first for sweet peas. Cultural certificates to R. Marshall for two beautiful cyclamens, J. McDonald for a splendid schizan-

Grand Rapids, Mich.

At Crabb & Hunter's, preparations for Easter are going on apace and the lilies, with the exception of a large batch of Harrisii, are looking fine. These bulbs were bought as gilt edge stock but very few good blooms will be produced though they were treated the same as the Giganteums, which are elegant plants now and producing fine flowers. Colour Cardinal tulip is highly thought of here for forcing. They had it in perfect condition January 4 and as good in color as this beautiful variety is in the open ground in May. The hydrangeas look like being in for Easter, while rambler roses and other pot stock will certainly be on time. The single violets here are a sheet of color and look remarkably well.

Henry Smith's houses are in fine condition now, the crops being all in good time for Easter except the lilies, which are a little behind. The pot plants are in fine order, specimen hydrangeas, primulas, cinerarias, spireas, rhododendrons and azaleas being finely flowered and good plants all ready for the Easter demand. In the cut flower section carnations and violets are especially good and we noted some extra heavy Asparagus plumosus and smilax strings 13-14 feet long. Local trade has been excellent here and Mr. Smith reports a lot of inquiries from out-of-town.

J. Schols has a grand lot of single violets and his benches of the double Lady Campbell are also in fine trim. We did not know that "Red Violets" had spread to Michigan but we found them here all right. Mr. Schols having called our attention to the highly colored radishes in the violet beds. We did not hear of any kick coming from the retailers on this account. It will be no trouble for Mr. Schols to cut from 15-20,000 of the blue violets per day for the next two weeks or so.

## That Hitchings Corrugated

It's the boiler with the hump, but it's the hump that makes the small coal bills. If it wasn't for the hump, it wouldn't have its long fire travel, and the longer the fire travel, the more economical the boiler.

The corrugations on the fire box increases the fire surface 50 per cent, and the greater the fire surface, the more heat absorbed. Send for catalog.

## HALF HOUR CHAPTERS FOR PLANT GROWERS

### Geraniums for Bedding.

Up to now the Easter plants have been taking up a good deal of room, and the grower has not been able to repot his bedding geraniums. But as soon as these are out the geraniums must have attention. We like to spread the plants out a little and give plenty of air for a day or two before potting, as it hardens the plants a little before disturbing the roots. Still, when time cannot be found for this it is not important and a portion of a bench can be cleared and the plants set back on it as they are potted. This potting, into 3½-inch or 4-inch, should be firm, as no further potting will be done and they still have quite a good deal to do. If the plants have drawn at all, it will be necessary to pinch the points to insure the side shoots breaking, but if they are already of good shape this will not be necessary. In setting them back, give them all the room possible, and if they are drawn either way, stage them pointing away from the light, so they will grow into shape. The small pots, out of which the plants are taken, should be laid out to dry, as there will probably be later batches in the sand ready for potting and these can also have attention. Careful attention to the ventilation for this young stock will be necessary for a few days after repotting, but when once re-established in the pots the plants will need all the air possible to induce a sturdy, hard growth, and the oftener they are picked over and given a new stand, the better, as it tends to make the plants a better shape than if allowed to grow straight up.

### Shading Plants in Flower.

Nothing so quickly takes the color out of azaleas, bulbous stock and other flowering plants as bright sunshine, such as we are likely to get now, following dull weather, and it will be necessary to shade them regularly. Some growers content themselves with whitewashing the roof, but a covering, just above the plants, of thin, cheap muslin is far better. Suspended about

a yard above the heads of the plants, this material not only keeps the color in the flowers but, in the case of light colored and white flowers, it prevents dust settling on them and disfiguring them. Dust will blow in through the roof even of the best constructed houses, and in or near large cities the sooty deposit from soft coal renders it impossible to keep the flowers clean without some such protection. And it may be noted that a blemish of this kind is a serious one in the eyes of first-class retailers who handle the plants, and shows up much more plainly in the retail store, where everything is spick and span, than in the green-houses. From now on it will probably be necessary to shade all the time and, even if there are not always sufficient flowering plants to fill the space, there are always some plants that need retarding, or newly potted stock that needs the shade, to fill up, so that it is not necessary to take the shading material up and down frequently.

### Fibrous Rooted Begonias.

The free flowering nature of the fibrous rooted, small growing begonias is well known, and this must not be further encouraged by allowing the plants to become pot-bound, or they will not make a free growth. In a batch of seedlings there is always considerable variety, and we have selected those of best growth and color of flowers for stock. But unfortunately, the two things are not always combined and the plants with the finest color flowers are only too often either weak in growth or tall and lanky, and have not the bush form and many shoots that are desirable in this class of plant. While, as noted above, the plants do not like to be pinched for pot room, they should not, on the other hand, be given too much. The roots, while fairly vigorous, are not of a nature to enwrap and take possession of large quantities of soil; nor is it necessary, for in many cases, they have to be planted in window boxes, vases and other similar positions, and the smaller, in reason, the pots are the

better. Give the plants a good light position and allow plenty of air, a cool and only moderately moist atmosphere suiting them best.

#### Cyclamens.

The cyclamen grower will have to get busy now, for if good stock is to be produced by Christmas the plants will have to be kept going at a good pace right along. This does not mean that forcing conditions have to be resorted to, for these are not suitable for cyclamens. What they want is to be kept growing steadily all the time, from the time the seedlings appear above ground until the plants are finished. What the old growers lost, with their system of growing and resting—or roasting—is easily seen in the handsome specimens now grown in about 12 months, or a little over, simply by the natural method of letting the plants go on and take their proper course. The cyclamen likes light in winter and shade in summer, equable temperature and atmospheric conditions all the year round, as far as possible, and there you are—that is all there is to it from that point of view. As to soil, they like a good, holding loam, enriched with well-dried cow manure, or some other good fertilizer, and held in proper mechanical condition by the addition of some hard, gritty substance as sand or road grit, finely broken crocks, or anything that forms a buffer to the moisture and gives the roots a chance to breathe. The forwardest plants are now getting established in 2-inch pots and we have them on a bench quite a little distance from the glass, rather farther than we like, in fact, and they will be raised as soon as we can get around to it. The reason for putting them there was that

after potting, a very severe frost occurred, and if placed on the shelves close to the glass the rapid change of temperature may cause a check to their growth, which is very undesirable just now. But just as soon as the weather moderated the plants were put up close to the glass, where they will have to be watched carefully for water at the root and shaded lightly as soon next month as the sun gains power enough to injure the foliage. This about sums up the situation for the grower of these plants during the next month.

#### Hardwooded Plants

It is just at this time, between the seasons, that growers of hardwooded plants, such as heaths, epacris, boronias, and similar stock are apt to neglect their plants because of lack of room or lack of time to attend to them. It is too early to place them outdoors and the temperature inside is likely to rise too high for the plants. The proper place for them now, whether young stock or old plants, is on a cool, moist bottom of ashes in a house not shaded but well ventilated night and day. This will insure the roots drying out regularly and taking moisture, which is absolutely necessary to their well being. Plants that keep constantly moist have something wrong at the root, and it is up to the grower to find out what it is and find out pretty quickly if he is going to raise them, for these plants are too sensitive and the roots too small to stand extremes of either moisture or drought for long. Possibly the drainage may be wrong or worms may have worked up into the soil, and if they are badly injured the plants may just as well be thrown

away, for they will never pay for keeping. To do any good with this class of plants they must be kept healthy and growing from the start, and the only way to do this is to keep them in a cool, light, airy house during winter, and water carefully, thoroughly soaking every inch of the soil when watering and giving no more until it is getting on the dry side again. In summer the plants should be grown in a sunny position outdoors, but the pots must be covered with ashes (plunged) to keep the heat of the sun from burning the roots.

## THE RETAIL TRADE

#### Home Wedding Decorations.

Among the most interesting and profitable work a retailer has to do is the decoration of homes for wedding celebrations. It brings him into close personal contact with his customers and, if well carried out, establishes a confidence that insures a continuation of their patronage not only for this class of work, but for anything else that may be needed. The very nature of the work prevents anything like general rules being laid down for it. The amount of money the customer wishes to pay, the style and character of the rooms and the wishes of those connected with it have all to be considered in preparing a scheme for decorations, but the decorator should have a scheme prepared and work in conformity with it all through. In the majority of cases it is usual to have each room treated with one color outside of the green used, but this rule, too, is frequently broken and the florist must study the taste and orders of his patron, unless he is given *carte blanche*, in which case he must use his own judgment and make the most artistic and pleasing decorations he is capable of.

Unfortunately florist decorators often get into a rut and carry out the same scheme, or at least the same style of decorations, on all and sundry occasions. It is well to have a distinctive style, but let the details of the scheme be changed as often as possible. The use of plants for mantels and other prominent parts of the rooms is not as popular as it once was, especially in rooms or homes of moderate dimensions. In large halls and corridors, reception rooms and salons where the style of indoor architecture needs them, large palms and foliage plants have a noble appearance and are suitable, but in many smaller rooms a few vases of cut flowers and a pedestal plant or two are more in keeping. Still many people prefer the former and like their mantels draped with vines and enlivened with flowering plants. In this case see that the plants are of a light and elegant character, that the mirrors on the mantels are draped, not hidden, and that the vines used are light and elegant, not heavy in comparison with the room fittings.

Decorations should not be obtrusive. They should appear supplementary to the furniture and fittings of the room, not as if the room was built purposely for them and must, in all cases, be in keeping with the general

NOVELTY EASTER BASKET BY H. C. ROWE, CHICAGO.

Twig Basket with Hyacinths, Easter Lilies and Primula Obconica

A FINE HOME WEDDING DECORATION BY SMITH & FETTERS, CLEVELAND, O.

style of decorations. In heavy paneled dining rooms the large Japanese and other chrysanthemums on long stems and, in large vases are fine but they would be quite out of place in a pretty pink and white or white and gilt room where sprays of single and pompon varieties would be more suitable enlivened with pretty little specimens of Cocos Weddelliana or some of the small, fine foliaged aralias. Many more instances of suitable decorations could be cited, but so much depends upon individual circumstances that little good would probably result. One thing is very important. Always choose help that will be as quiet and orderly as possible around the homes of patrons, men not given to untidy or loose habits, and instruct them to defer to the wishes of anyone with whom they come into contact in their work. Many a good patron has been lost to a florist owing to young and irresponsible help being sent with no controlling head to keep order. Patrons may not say anything at the time, but it is credited up—not to the helpers themselves, but to the firm that employs them and will be remembered the next time work of this class is needed. The decorations illustrated on page 475 were carried out at the home of a customer by Smith & Fetters, Cleveland, O. This firm has a reputation for this class of work and has carried out some of the most successful and elaborate decoration in the country.

#### Easter Business in Chicago.

The low price at which good stock could be obtained, the excellent demand and the fine weather all combined to make the Easter business of 1910 one of the best on record for the retailer. Wholesalers and commission men may feel sore when good stock has to be sold at so low a price, but this does not make any difference to the retailer. Still the present can hardly be described as a good Easter for cut flowers, even with the retailers and quite a considerable part of the business was in pot plants, which surely never sold better. When we looked at the immense number of plants in some of the principal retailers' stores we must confess that we had our doubts about their cleaning up, but on Monday, in the same stores, not a plant or basket of any consequence could be seen. Everybody was tired, but all expressed themselves as more than satisfied, business having exceeded their most sanguine expectations. We did not make a very exhaustive tour of the city after Easter, but the few instances noted are typical of conditions all over.

Harry C. Rowe, Monroe street, had a very fine lot of plants and plant baskets. He had his counter moved back to give more room in the store and every available corner was filled. Mr. Rowe always has original ideas in his baskets and this season was no exception. We have not space to go into details, but one is certainly worthy of mention if only on account of its simplicity. It was made only of Easter lilies and white spirea with a little green added and we have seldom seen a simpler and at the same time

so effective a basket. Great quantities were handled, both of cut flowers and plants and on Monday of the present week hardly a plant could be seen, showing that an excellent business had been done. At the Bohannon Floral Co., the same story was told. The baskets here were very artistic, the rambler rose being very effectively used. Here too on Monday there was nothing much left and the business was exceptionally good.

John Mangel had a fine trade. As we noted last week his store was just full of choice and elegant work, but everything was cleaned out. Besides the rush of Easter business, Mr. Mangel had the decorations at a banquet given by Hart, Schafner & Marx at the New Congress hotel and this kept everyone on the jump. The tables were laid in an egg-shaped formation

baskets would go. They were there in all imaginable shapes and sizes from the small china vase to large baskets containing big specimen plants and everything sold.

Early orders nearly cleaned out Chas. A. Samuelson's stock of large baskets and more had to be made. The business was especially good in the pretty art ware and similar stock for which this store is noted. His Easter window was a beauty. A gateway in white was flanked by pillars, Dorothy Perkins roses being trained over these in a very natural and pleasing manner. In front a lawn was made of green moss and a miniature lake, in which ducks were disporting, was edged with *Adiantum Farleyense*. Fine specimen plants and baskets stood around and the whole scene was very pretty. Wm. J. Smyth had a fine lot

POTS OF SINGLE YELLOW TULIPS, GOLDFINCH.

and in the center was a fountain, kept playing, with a border of red tulips, flowering plants and ferns. In the basin, crotons and *Cyperus alternifolius* were arranged, boxes of yellow tulips were placed at prominent places among the palms and ferns and red tulips were used on the cloth. The whole scheme was red and yellow and was carried out in the new Florentine room. The Fleischman Floral Co. had by far the biggest Easter business ever done by the firm and that is saying a good deal. Anyone seeing the store on Friday would naturally wonder where all the fine plants and plant

of all kinds of stock and baskets in his own excellent style and all the other south side retailers report a magnificent business. Retailers, in fact, will have cause to remember the present Easter as one of the best on record.

OSHKOSH, WIS.—E. F. Barnett, of the Oshkosh Floral Co., has incorporated a company, under the old title. Mr. Barnett started doing business here, February 19, at 116 Main street, and has enjoyed an excellent business since then.

## THE VIOLET.

### Violets in the East.

As the present is the time of greatest flower production and also of very low prices, would it not pay to throw out a part of the plants and make room for a planting of Memorial day flowers? I think sometimes we hang on to a crop that is hardly paying the cost of picking, when, by clearing the

### PLANT BREEDING.

If you would build up a good strain of either single or double violets, practice rigid selection. It is possible to create a strain, after a few years of careful work, that will be so much superior to the stock with which one started as to pass for an improved variety. This is true of almost all plants, but we think the single violet lends itself to this method of improvement more easily than anything with

that the stems always come longer; another throws flowers of a darker or more desirable shade; still another is more free in flowering. There are only a few plants in the house showing these desirable traits, while there are hundreds with deformed or streaky flowers, short stems, or with a rank growth and few flowers. If you are a careful observer, with a quick eye, you will see this difference, and if you are not, you will never rank with the best growers of violets or anything else. All these desirable and undesirable characteristics can most surely be perpetuated by propagation. There may be some reversion, but that may be eliminated by further selection.

Indiscriminate propagation is the surest way to so run out the stock that it is not worth growing, while from one plant of superior merit one can, in a few years, build up a strain that will be flattering to the self respect and fattening to the pocket-book. The man who owns this superior stock is always popular with the buyers, while the careless, slipshod grower remains always in the ranks of the "also rans." VIOLA.

SARATOGA SPRINGS, N. Y.—John Ralph, of Woodlawn avenue, had the floral decorations at the Saratoga club, given to the commissioners of the state reservation March 15. In the flag and bunting decorations only the national colors were used. In front of the speakers' table was a large wreath of pink carnations, and on either side smaller wreaths of daffodils, arranged in Empire design. Between the wreaths were garlands of smilax. On the table was a large vase of Killarney roses and daffodils. The other tables alternated, one having a vase of carnations with the pink flowers strewn beneath, the same arrangement being followed out on the adjoining table, by the use of daffodils. The effect, aided by a profuse use of ferns, proved most attractive, and was the cause of highly complimentary comment.

BIRCH BARK BASKET OF EASTER LILY, HYACINTHS AND FERNS.

By Andrew McAdams, Chicago.

space promptly, room could be made for something that would pay. There seems a considerable lack of knowledge, not only among beginners, but among those who ought to know, as to the proper time to pick violets, and how to handle them after gathering. Single violets should not be picked until the flowers are open flat, that is, until the two upper petals are slightly reflexed. At this stage they bunch better and will not hang their heads or "show their necks" so quickly. Our method is to bunch as fast as the flowers are picked, plunging the stems into clean water for about a half hour, and placing in a cool cellar. After a half hour in water, they are packed in boxes, made as near air-tight as possible by the use of waxed paper, and not disturbed again until sold. Treated in this way they will retain their freshness and odor much longer than if left in water.

### PROPAGATION.

If strong plants of the double varieties for next year are wanted, propagation should start now. Select only from the best plants the strongest runners and root in clean sand, in a temperature eight or ten degrees warmer than the violet house. If propagating plants of the single varieties from divisions, which is believed to be the best method, next month, after the plants are through flowering, is the proper time to divide them. Use only the new growth, throwing away the old crown; cut back the roots two-thirds and plant in flats of soil.

which we have worked. Go through the beds carefully, noting such plants as show desirable traits of habit or bloom. On one you will perhaps notice that the petals are wider, larger, or with more substance; on another

## THE CANNA.

### Cannas of the Past Quarter-Century.

BY ANTOINE WINTZER.

Those of us who can look back 25 years, when the canna as a decorative plant was valued more for its tropical foliage effect than for blossoms, cannot fail to observe with pleasure the vast improvement in the size, color and form of the present day canna as compared with those we knew in the past. The transformation has been truly marvelous, but the majority have failed to realize its far-reaching effect. The canna of today is, without exception, the king of summer bedding and foliage plants. The writer cannot think of any other class of plants that will give a continuous mass of bloom from early summer on an average of 100 days, and sometimes more, especially if the fall be favorable. The modern cannas have a combination of form and a range and richness of color that is simply wonderful.

Those who have not seen a field of cannas near the close of a calm and mild August or September day, have missed one of the most beautiful and charming floral displays that earth has ever produced. People travel hundreds of miles and have climbed to the top of mountains to view a glorious sunset. When you have a beautiful field of cannas in bloom you can feast your eyes to your heart's content on colors as rich and gorgeous as the most brilliant sunset skies, with the advantage that while you cannot reach the clouds, which will dissolve into vapor as you approach them, you can admire and examine the canna to your heart's content.

### THE HISTORY OF THE CANNA.

The canna has a history. Centuries before the foot of the white man trod the pathless wilderness of the American continent, it grew and expanded its massive foliage to the eyes of the red man of the forest, who probably found in its hard round seeds the source of amusement for his children to try their skill in shooting at small birds through blow guns. Early in, or during the middle of the last century, enterprising botanists or collectors introduced the canna into Europe where the species were inspected by men of science and honored with high sounding botanical names. The garden cannas of the present time were mainly bred from such types as *C. Indica*, *C. iridiflora*, *C. Warscewiczii*, *C. glauca* and later *C. Ehmannii*, *C. alba rosea* and *C. flaccida*. From these various types, through interbreeding, the magnificent cannas of the present day have been evolved.

### THE CROZY CANNAS.

The name of Antoine Crozy, of France, as the originator of an improved breed of cannas, is well known wherever this beautiful flower is grown. Through the introduction in 1890 of his famous *Mme. Crozy*, the name of Crozy cannas was generally applied to all the gladiolus flowered type originated later, although many of the later types and varieties were bred from other strains by different growers. After the introduction of

*Mme. Crozy*, *Mons. Crozy*, by his numerous introductions, began to be looked upon as the chief source from which the new French cannas could be expected. Of the numerous varieties originated by Crozy from 1890 to 1895 many are still quite prominent, among these being *Alphonse Bouvier*, *Florence Vaughan*, *Souv. de Antoine Crozy*, *Charles Henderson* and others.

There next loomed into prominence the introductions of Pfitzer from Germany, most noteworthy of which was *Queen Charlotte*, which at the time of its introduction in 1893 created

Canna King Humbert.

quite a sensation, being the finest gilt edge variety at that time. Mr. Pfitzer has and is still introducing many other notable kinds. At the time of the Columbian exposition held at Chicago in 1893 a number of the most progressive firms were already listing the notable varieties introduced by these two pioneers, and it remained for this exhibition to show to the general public the possibilities of this wonderful bedding plant. Among the prominent

Antoine Wintzer.  
Hybridizing Cannas.

kinds there exhibited may be mentioned a few of those which were successful in carrying off prizes, as follows: *Alphonse Bouvier*, *Charles Henderson*, *Egandale*, *Florence Vaughan*, *J. B. Cabot*, *Mme. Crozy*, *Explorateur Crampbell*, *Geo. W. Childs*, *J. C. Vaughan* and *Alba Rosea* made the best display.

### AMERICAN RAISED CANNAS.

This display seemed to have aroused the American people, and especially hybridizers, to an increased interest in the possibilities of the canna, so that in the following few years the market soon began to be flooded with new varieties. One noteworthy feature of the list at this period shows an almost total absence of pink varieties; this color class was left for an American breeder to develop, and the need was soon supplied by such sorts as *Pink Ehmannii*, 1894; *Maiden's Blush*, 1897, shortly followed by *Martha Washington* and *Rosemawr* in 1898; also others. Prominent among the hybridizers of this period was Dr. Van Fleet, who, through his untiring efforts in working with *Ehmannii*, produced the first shades of pink; and *Alsace*, the nearest approach to a white, was introduced in 1896 in co-operation with the writer, who has continued and is still following up the work.

### DAMMANNS, THE ITALIAN RAISERS.

At this time, about 1895, there appeared on the horizon entirely new workers in this line, Dammanns of Italy, who produced the first of the strain of cannas now known as the orchid flowering type. The first two in this class were *Austria* and *Italia*, said to have been produced by crossing *Mme. Crozy* with *C. flaccida*. It is interesting now for us to remember their predictions made at that time, that all other varieties would soon be discarded in favor of the new strain. But later experience has proved that, while this type has given us the largest flower, it has by no means superseded the gladiolus flowered type, which now is more extensively used than any other class.

In the following year many varieties of this same strain were introduced by the Dammanns, but comparatively few of them have remained in general commerce. While this class produced flowers of larger size and better form, the petals were flimsy and lacking in substance, the trusses were also smaller and they were of later blooming habit. There was a loss also in brilliancy of color as compared with the gladiolus flowered type. Many of these defective features, however, have been eliminated by American and European breeders, whose later introductions show great improvement in earliness and profusion of bloom, texture of petals and brilliancy of color, at the same time retaining their wonderful size and form.

### NEW SHADES.

While the Dammanns were busy on their orchid flowering strain American breeders were striving to develop new types by producing shades and colors heretofore lacking. The catalogues of prominent growers of this period by various introductions attest to the

great improvement being made annually in size of flowers, brilliancy of color and altogether new shades. The efforts to produce a strain better adapted to the trying conditions of the American climate, which called for petals of greater substance were very successful. Another fault of many of the early introductions, as for example Alphonse Bouvier, was the drooping head, another feature corrected by later hybridizers. Still further advance was made in the breeding of more dwarf varieties of good habit and free blooming qualities, better adapted for planting in small gardens. Prominent among these dwarf varieties were Niagara, Buttercup, Triumph and others. Another line of work was developing flowers of new colors on the bronze leaved types, the efforts of hybridizers being directed toward producing flowers of lighter shade on darker foliage.

A new canna of great merit, originated about this time by John A. Kemp, was Pennsylvania, an example of one of the most remarkable achievements and greatest breaks in canna hybridizing. This was produced by crossing Duke of Marlboro with one of the orchid flowering varieties, thus producing the first solid red in this class. A good example of the perseverance and patience required in canna breeders is exemplified in the production of the then nearest white canna, Mont Blanc, which is the result of cross breeding extending over eight years, having for its progenitor, Alsace, which always had the disadvantage of very narrow petals. This was in 1903.

Many who attended the Louisiana Purchase exposition, held at St. Louis in 1904, will long remember the remarkable display of cannas there shown by the leading firms of this country, one firm alone having beds extending over a space of four and a half acres, with no less than 50 kinds, many of them made up in beds of a solid color, and perhaps the most prominent of those there exhibited was Louisiana, which carried off the grand prize. This is an introduction of the author's, and, together with King Humbert, attracted wide attention for its brilliancy, early blooming qualities and splendid effectiveness. It might be of interest to know that the two cannas, Louisiana and New York, are the result of an entire winter's work in hybridizing. Prominent among the prize-winning cannas at St. Louis were Betsy Ross, Buttercup, Duke of York, Evolution, Niagara, Queen of Holland, Cherokee, West Grove, Florence Vaughan, Black Prince, Hiawatha and Brandywine.

#### THE ENGLISH GROWERS' WORK.

But without doubt the most comprehensive test that has been made in the history of the canna, to our knowledge, took place at Wisley, near London, the experimental station of the Royal Horticultural Society of England. This test was inaugurated in the spring of 1906 when an invitation was sent out to growers in Europe and America and 271 different stocks were received for trial, which extended over two years (1906-1907); 220 distinct varieties were represented in this test and were three times in-

CANNA ROSEA GIGANTEA.

spected by the floral committee and the following varieties were selected as the best in color, receiving awards of merit (A. M.) or highly commended (XXX):

White.—Blanche Wintzer. Yellow.—Burbank, R. Wallace, Wyoming. Orange.—Hesperide, Oscar Dannecker, S. T. Wright, Uncle Sam. Rose.—Duke of York, Frau Philipp Siesmayer, Isabella Breitschwerdt, Melrose, Venus. Red.—Furst Wied, Grossherzog Ernst Ludwig, Karl Kirsten, Pluto, Wilhelm Boffinger, Wm. Saunders. Yellow, spotted with red.—Elizabeth Hoss, Gladiator, J. B. van der Schoot.

It is valuable as a matter of history for us to note the awards of merit that have been granted cannas by the Royal Horticultural Society during the past 20 years as follows: 1890, Mad. Crozy. 1892, Alphonse Bouvier. 1892,

Queen Charlotte, Sophie Buchner, Duchess of York. 1894, L. E. Bally. 1896, Roi des Rouges, Austria, Italia. 1897, Allemania, America, Compté de Bouchard. Stradfrath Hiedenrich, Edouard Meig. 1898, Partenope. 1900, Secy. Chabanne. 1901, Grossherzog Ernst Ludwig, Oscar Dannecker, Jean Tissot, Elizabeth Hoss, Reichkanzler Furst Hohenlohe, Mrs. Kate Gray, Mrs. G. A. Strohlein. 1907, Melrose, S. T. Wright, Wm. Saunders, Blanche Wintzer, Duke of York, Venus, Gladiator, Uncle Sam, Isabella Breitschwerdt, Wm. Boffinger, Hesperide, R. Wallace, J. B. van der Schoot, Pluto, Burbank, Furst Weid. Forty per cent of the awards of 1907 were of American origin, although there was but one firm contributing.

There is considerable confusion about the canna business as it exists today. The summary of the cannas of-

ferred in the catalogues of 11 of the most prominent firms show as many as 158 canna varieties now offered on this side of the Atlantic.

The work done by the English through their Royal Horticultural Society is certainly an object lesson which we Americans would do well to adopt, especially as the canna is much better adapted to the climatic conditions of America than to those in England. If there was an experiment station to which all new cannas could be sent for trial it would help us soon to see and give proper credit for deserving new kinds while inferior varieties could be readily weeded out.

The writer feels that in compiling this paper he may have omitted some noteworthy varieties, which he has not had the opportunity of seeing, but submits herewith a list of kinds which have been thoroughly tested and found to be among the best in America to-day.

#### GLADIOLUS FLOWERED, BRONZE FOLIAGE.

Shades of Red.—Wm. Saunders, Chautauqua, Jupiter, David Harum, Brandywine, Mrs. Geo. Strohleim.

Pink and Salmon Shades.—Hiawatha, Minnehaha, Eastern Beauty, Queen of Holland, Evolution.

#### GREEN FOLIAGE.

Shades of Red.—Duke of Marlboro, Chicago, Pres. McKinley, Comte de Sachs, Philadelphia Improved, Pillar of Fire, Chas. Henderson, Geo. Washington, Pres. Cleveland, Wintzer's Meteor, Cherokee, Express.

Shades of Pink, Rose and Salmon.—Rosea Gigantea, West Grove, Ottawa, Martha Washington, Betsy Ross, Louise, Mlle. Berat.

Shades of Yellow and Orange.—Buttercup, Gladiator, Brilliant, Improved Coronet, Florence Vaughan, Elizabeth Hoss, California, Comte de Bouchard.

Near White.—Mont Blanc, Alsace, Pink Variegated.—Venus, Duke of York, Gladiolora.

Gilt Edged.—Niagara, Mme. Crozy, Souv. de A. Crozy, Queen Charlotte.

#### ORCHID FLOWERING, BRONZE FOLIAGE.

Red Shades.—New York, King Humbert.

Orange.—Wyoming.

#### GREEN FOLIAGE.

Red Shades.—Louisiana, Uncle Sam, Pennsylvania, Mrs. Kate Gray.

Orange.—Indiana.

Variegated.—Allemania, Long Branch, Frederic Benary.

### Three Good New Cannas

At Schenley park, Pittsburg, Pa., quite a number of the finer varieties of cannas are grown in the fine bedding displays made there each summer and the following, which are recommended by Geo. W. Burke, the superintendent of parks, should be kept in mind:

"King Humbert was considered a great acquisition; it is a grand canna. foliage and trusses fine and size and color of individual flowers almost ideal. We would highly recommend it to any one interested in cannas.

"Venus is quite a novelty; the foliage is good and the flowers quite attractive. It is a nice thing to grow in limited quantities but with us it does not stand the sun, as well as other varieties.

"Harry Laing is a fine canna for general purposes, with good foliage, large trusses of flowers and fine color.

We consider it quite an improvement on some of the older scarlet varieties."

### Hotbeds.

After the rush of Easter business is over the grower's energies must turn to the bedding plants and the working up of the new stock for the coming season's planting. The grower who handles a general line of plants for bedding, together with roses, carnations, chrysanthemums, etc., for cut flowers, usually finds at this season of the year that the lack of bench space is his most difficult problem. To relieve this overcrowded condition, a hotbed, by taking care of several varieties of the bedding plants, will be found extremely useful. Steam heated hotbeds are those most generally used. These can be constructed as permanent frames, the length of which may be governed to suit the requirements, but they are much handier and more economical to work if built in lengths of not more than 50 feet. Two-inch lumber is the best material to use for constructing the frames; drive stout stakes into the ground about every four feet, nailing the planks to these; allow the height of the frame at the back to be 16 inches, the front 12 inches and the width of the frame six feet. To provide the steam heat for a bottom temperature of 70°-75° it will take three lines of 1-inch pipe, one on each side, about eight inches away from the sides of the frame and one line in the center of the bed connected to headers at each end of the frames.

The pipes should be fitted with flow and return valves at the headers at both ends of the frame to enable each run of beds to be controlled separately. The steam pipes should be laid about 10 inches below the surface of the beds. Dig trenches the length of the beds where the pipes are to go and after laying them, fill in with light, loose soil such as the heat can penetrate freely. Avoid any cold clay soil for this purpose. Allowance should be made for plenty of head room for the plants when filling the soil. A clear 10 inches at the back and five inches in the front of the frame from the top of the plants to the glass should be allowed. Steam should be turned into the frame two or three days before using, so that the beds are thoroughly heated through. The plants can be planted direct into the soil of the beds, carried in flats on the surface or left in the pots and plunged in loose material, the latter method suiting our ideas the best. The hotbed is an ideal place for bringing along such plants as alternanthera, lobelia, centaurea, verbenas, santolina, celosia or achyranthus, also egg plants, peppers and all of the stock for outdoor planting that requires a quick growth.

Stable manure is also very largely used as heating material for hotbeds, and for this purpose the building of the frames is the same, leaving out the piping. In preparing the manure it should be turned over thoroughly a week or so before putting into the frame, but do not let it remain in the pile long enough to burn dry. If it appears too dry at any time, give a light damping down. The old style

way of building a pile of manure and setting the frame on the top is not now followed to any great extent by those who work hotbeds on a large scale but, instead, the manure is thrown into the frames and thoroughly tramped down, allowing for a depth of about 10 inches of the material after it has settled down. To do this it is necessary to take out a little of the ground before putting in the manure to insure the proper head room for the plants. The sides and ends of the frames on the outside are then well banked up with manure, even to the top of the frame. The sash are placed on and the manure allowed to steam off a little for a day or two before putting in soil or plants. One of the essential points in managing the hotbed is to keep a little air on on every favorable occasion to guard against fungus and damping.

C. W. JOHNSON.

### Yellow Callas.

A peculiar charm invests the yellow calla, to which the average gardener readily succumbs. The chaste white *Richardia* (*Calla*) *Africana* has been familiar to generations of gardeners, and it cannot be displaced even by the charming newcomers. The cultural requirements of the white and yellow kinds is entirely at variance, inasmuch as the period of greatest activity with *Richardia Africana* agrees with the dormant or resting season of the yellow kinds.

Seeds of the yellow callas are sometimes obtainable, and flowering plants may be raised from them in three or four years. Dormant tubers are always offered by the trade at this season, and for a small sum flowering tubers can be had to begin with, and where an early display is required the latter are generally to be recommended.

The common calla comes from the moister regions of South Africa, and is therefore semi-aquatic by origin, whereas the yellow kinds come from warm inland districts, where the "hot season" is of periodic occurrence, and synchronises with the resting period of the plants. In this country their cultivation can only be successfully carried out under glass, and, in general practice, it is found of greatest convenience to rest them during the winter months, crowding their vegetative period into our spring and summer.

All the yellow callas are best potted in spring, in a rich light compost similar to that used for the common arum; an intermediate house will meet their requirements till June, when they succeed under ordinary greenhouse conditions until such time as they pass out of flower, and the plants are induced to go to rest by gradually withdrawing the supply of water, eventually withholding it entirely.

The best yellow callas for garden purposes are as under: *Richardia Elliottiana*, a species originally raised from seed imported from South Africa. The spathes are of a golden-yellow color, and the leaves are marked by irregular white blotches. The plant is vigorous in growth, and flowers freely during June and July from tubers started in February and March. *R. Pentlandi* is a stronger and finer species than the foregoing, and the leaves are deep green, while the stalks are more or less marked with purple blotches. The spathes are rich golden-yellow, with a maroon blotch at the base; it is a free and vigorous grower, requiring at least 10 degrees more heat than the common arum to bring

it to perfection. R. Mrs. Roosevelt is a hybrid between R. Elliottiana and R. albo maculata; from the latter parent it derives a hardy constitution, and, therefore, succeeds under cooler conditions than the others. The flowers are pale sulphur-yellow, with a maroon blotch at the base of the spathe. R. Taylori is a hybrid between R. Elliottiana and R. aurata, in which the flowers are almost identical with those of R. Mrs. Roosevelt, if anything, rather deeper in tint. R. albo maculata is the hardiest, but scarcely merits notice as a decorative subject; the spathes, as a rule, have more green than yellow. Being fairly hardy, it is sometimes used to secure foliage contrast in the summer season. —Gardeners' Magazine.

### To Be Done Now.

#### IN THE GREENHOUSES.

Where the earliest sown fern spores have failed from any cause, sow again using fertilized soil and placing the pans or flats in a shady, moist position.

The young stock of double petunias can probably be topped now and the tops inserted as cuttings.

In handling grafted roses considerable care is necessary to avoid breaking out the scions.

Cyperus alternifolius may be increased to any extent now by means of the short tips placed in sand always kept saturated with moisture.

Give the benches of smilax that were cut down for Easter a week or two's rest before topdressing and starting again.

Old plants of sansevierias and aspidistras may be shaken out and divided now for stock purposes.

Pinch the young carnations regularly when about three inches high in order to have an even lot for planting out.

Sow seed of Asparagus plumosus and A. Sprengeri in gentle heat. Let the pots or flats be well drained and use a light soil.

Avoid too much moisture in the atmosphere where Deutzia gracilis is coming into flower and stop spraying as soon as the blooms show white.

Where rose or other benches are mulched with fresh manure keep a little air on at night to prevent the fumes becoming too strong and injuring the plants.

Watch for the first sign of mildew on roses, young or old, and use sulphur on the pipes at once.

#### OUTDOORS.

Tidy up the shrubbery, removing all dead points of shoots and old useless wood.

Sow sweet peas on well enriched soil as soon as it can be got into good condition but do not hurry to get on land that is wet. Time and seed will be saved by waiting.

Burnt earth and garden refuse sprinkled dry on the surface will often make a stubborn or wet seed bed work well.

Prepare frames with especial care for seedling pansies and be prepared to cover them if necessary should frost set in again.

Hardy annuals should be sown in plenty now. Nothing gives so bright and cheerful an appearance at so little cost.

Frequent hoeing, as soon as the soil is in fit condition, is a great aid to early crops. A little nitrate of soda also helps, especially crops of the brassica order.

Burn up any rubbish that is around and clean up the place generally for spring planting.

## THE EASTER BUSINESS OF 1910

WE are again enabled, through the courtesy of our many correspondents in this country and Canada, to give reports of the Easter business which, we are glad to note, show a healthy increase over that of last year. The abnormally warm weather made stock extremely plentiful, and the prices to growers have not been as satisfactory as in some years, but the retailers have reaped the advantage. Taken altogether the Easter business must be described as eminently satisfactory.

YOUNGSTOWN, O.—John Walker reports his sales as 40 per cent greater than those of last season, with prices the same on plants, but those on cut flowers lower. This was due to the over-supply of the latter owing to the warm weather. In plants, azaleas, bulb stock, lilies and rhododendrons sold best and there was a falling off in rambler roses and large hydrangeas. Bulbous flowers were the only ones that did not sell well. Owing to the early Easter, Mr. Walker did not grow as many lilies as usual for wholesaling, but had plenty of these and all other pot plants for his own use.

FT. WAYNE, IND.—W. J. & M. S. Vesey say their sales were greater by one-third this year than last at similar prices. There were plenty of cut flowers, but not enough plants for the demand. In plants, bulb stock, rambler, azaleas and daisies sold best, roses, carnations and violets being the cut flowers most wanted. All others in the town report fine business and all are congratulating themselves on the fact that Easter was not two weeks later, on account of the hot weather.

LONDON, ONT.—J. Gammage & Son report an increase of 30 per cent in Easter sales over those of last year, with lower prices on lilies. There were more flowers than were needed, but the supply of plants was about equal to the demand. Lilies and roses sold best in plants, made up baskets not being so popular. Violets and bulb stock sold better than roses. Every lily in the city was sold by 6 p. m. on Saturday and the weather was ideal for business and delivery.

ATLANTA, GA.—The Atlanta Greenhouses report a 25 per cent increase in sales at Easter at prices about the same as last year. Plants in bloom all sold out. Carnations were short, but there was plenty of roses. Azaleas, rambler roses and hydrangeas all sold well at big prices, but ferns and palms were a slow sale. Carnations and bulb-stock sold best in cut flowers. The warm weather brought along bulb stock such as hyacinths, too quickly, but lilies were just right.

FREDERICTON, N. B.—John Bebbington & Son report an increase in business over that of 1909 of about 10 per cent at prices about the same as last year. A few more carnations could have been sold, but there was plenty of plants. Lilies, azaleas, spireas, cinerarias and bulb stock all sold well, as did all varieties of cut flowers. The weather was good and considerable funeral work helped out the total.

BELLEFONTAINE, O.—R. S. McMurray had a nice Easter business, his sales totaling some 25 per cent higher than those of last year, at prices about the same. Stock was just about equal to the demand and the business was about equally divided among the various classes of flowers.

MANCHESTER, N. H.—This is the first year in business for S. H. Mead & Co., but they say it has been extremely good, especially considering the fact that they took over the houses empty last fall. They sold over 1,600 pots of lilies.

JANESVILLE, WIS.—The Janesville Floral Co. reports a remarkable increase in Easter sales over those of last year—no less than 50 per cent. Prices were about the same and more plants could have been sold. Spring flowers were in great demand, also lilies and bulb stock in pots. The demand for roses and carnations fell off. Nothing but fresh stock would go.

WINONA, MINN.—John Fuhlbruegge reports a phenomenal advance in Easter business, his report being approximately 50 per cent more than last year at about the same prices. Lilies and azaleas were short, but other plants were equal to the demand, as were cut flowers. Spireas sold slowly and lilies were in the lead, violets and lilies also leading as cut flowers.

ENID, OKLA.—J. R. Detwiler says his sales were somewhat less at Easter this year than last at prices about the same. There were more than enough plants for the demand, but hardly enough cut flowers, carnations and roses being most in demand. Mr. Detwiler says he will grow more cut flowers and less plants next year.

GAINESVILLE, GA.—J. E. Jackson, of the Piedmont Greenhouses, says his sales showed an increase of 25 per cent over those of last year at better prices. The supply of cut flowers and plants were not equal to the demand which ran to carnations and roses in cut flowers and flowering plants.

BRAMPTON, ONT.—The Dale Estate reports sales as greater than those of last year. Easter lilies continue to bring low prices in Canada, while the amount of flowers kept prices in all lines low. Bulbous stock was not much in demand, carnations, roses and valley having the call.

TROY, N. Y.—Sambrook Bros. report an increase in their business of about 20 per cent at similar prices to last year. Everything was in sufficient supply, except small plants, which sold better than large ones. In cut flowers, sweet peas and violets sold better than roses and carnations.

KOKOMO, IND.—W. W. Coles reports a 25 per cent increase in sales over those of last Easter at similar prices. Carnations were short and these and roses were much in demand. Prices were about the same and Easter lilies, azaleas and hyacinths were the plants most in demand.

ATCHISON, KANS.—Groves Greenhouses report trade and prices at Easter about the same as last year. Lilies were scarce, but all other plants were plentiful, and there were too many cut flowers, lilies being the best seller.

ATLANTIC CITY, N. J.—Edwards Floral Co. reports a fair increase in sales at Easter over those of last year at prices about equal. Azaleas sold best in plants and sweet peas and violets in cut flowers.

BROCKVILLE, ONT.—Edwards, Florists, say that business at Easter was all that could be desired, and the weather was ideal. Hydrangeas, azaleas, lilies and bulb stock sold out very close.

Blow softly, winds, o'er garden beds.

Where flowers are waking from their sleep.

While drowsily they lift their heads.

The skies of April laugh and weep;

Blow softly while the wild birds sing.

And rills exultant break their chains;

Blow softly, heralds of the Spring,—

Upon her throne fair April reigns.

RUTH RAYMOND.

APRIL SHOWERS, gentle and well distributed, may save many good reputations, not meaning the poets.

THE National Sweet Pea Society's preliminary schedule is out, with a fine list of special prizes. Secretary Harry A. Bunyard, 342 West Fourteenth street, New York, will be pleased to supply copies and all other information on application.

EASTER business was favored to a very large extent by the fine spring weather which prevailed.

EASTER SUNDAY, March 27, the temperature at Chicago was the highest on record for that month, the thermometer registering 81°.

RETAILERS say that a number of their best Easter customers, who go to California annually in winter, has not yet returned. Andrew Carnegie and others were in Chicago this week enroute from the coast.

THE Steamship Oceana, which arrived at New York from Bermuda March 24, brought only a small supply of lily blooms. The main supply of flowers from this source, it is said, will arrive after Easter. The greenhouse growers of lilies who marketed their crops before Easter have no doubt taken profits accordingly.

## Society of American Florists.

### EXECUTIVE COMMITTEE MEETING.

The regular Mid-Lent meeting of the executive board was held at the Seneca hotel, Rochester, N. Y., March 12, 14 and 15. The entire executive board, consisting of President Pierson, Geo. Asmus, John Young, W. J. Vesey, Eugene Dailedouze, W. N. Rudd, Robt. Craig, J. A. Valentine, F. W. Vick, Wm. F. Kasting and H. B. Dorner were present during the entire session. The usual routine of business was transacted.

The report of the treasurer and the financial report of the secretary for 1909 and also the supplementary reports for January and February, 1910, were received. These reports were referred to a committee consisting of Messrs. Valentine and Dailedouze and were reported by them to be correct. They were then accepted by the board.

The treasurer was instructed to deposit all interest, received from the funds of the society, to the credit of the reserve or permanent fund.

Several changes in rules relating to the management of the annual trade exhibition were adopted. For floor space the rates are to be as follows:

Minimum charge.....\$5.00

One hundred feet or less...

.....20c per sq. ft.

Excess over 100 ft. and not

over 200 ft.....18c per sq. ft.

Excess over 200 ft.....

.....15c per sq. ft.

All signs, in any exhibit, whether on wall or elsewhere, shall not extend higher than six feet six inches above the floor. The charges for sign space outside exhibition space shall be charged for at same rate as floor space. For wall space for exhibition purposes and not for signs, the rates shall be one-half that for floor space. All signs used in the exhibition shall be black letters on a white ground. No other color shall be allowed to be used either for lettering or for ornament.

A resolution was adopted providing that the public should be admitted to the exhibition every evening at 7 p. m. and on Thursday from 2 p. m. until closing time, and at all other times the exhibition to be closed to the public. An admission fee of 25 cents will be charged. All arrangements attendant upon the admission of the

public is to be under the control of a committee consisting of F. W. Vick, Wm. F. Kasting and G. B. Hart.

Chas. H. Vick, on the recommendation of Vice-President Vick and the Rochester Florists' Association, was unanimously elected superintendent of the trade exhibition.

In connection with the committee of the local club, the board visited the large convention hall offered for the trade exhibition and meetings and accepted it. This building contains about 48,000 square feet of floor space and was considered, by members of the board, to be the best hall ever offered for a trade exhibit.

President Pierson appointed John Westcott as chairman of the committee on convention sports, with A. F. Vick, R. G. Salter and J. M. Keller as the other members.

The usual appropriations were made for the year.

Mr. Valentine submitted to the board an outline for the organization of a retailers' section of the society. The plan in general provides that all members of this section must first become members of the society. It contemplates a trade arrangement by which business in distant towns may be exchanged on a safe basis as to quality of stock and credit. It was the unanimous opinion of the board that the idea is an excellent one for the society and will prove valuable to the retailers.

It was the unanimous opinion of the board that a special meeting of the society should be held during the time of the National Flower Show. A recommendation to that effect was made to the society.

The following resolution was adopted:

Resolved, That if five or more members write to the secretary, expressing an especial interest in any given floricultural topic and request the organization of a section devoted to that subject, the secretary shall assign a place on the programme to that topic and shall designate it by a suitable name as a separate section. The object of this arrangement is to provide sections so that members interested in these various subjects may get together and discuss them.

A tentative programme for the coming meeting was adopted.

The executive board further indorsed the work of the experiment stations by passing resolutions commending the proposition for the state of New York to appropriate money for the erection of greenhouses at Cornell University for experimental and teaching work in floriculture. A bill was recently introduced in the legislature at Albany embodying an appropriation of \$50,000 for this purpose.

The tariff and legislative committee was directed to fully investigate the cause of the present high price of glass and to take whatever steps are necessary to relieve the situation. It was also requested to recommend such tariff legislation as will prevent a recurrence or continuation of the present conditions.

The following amendments to the constitution and by-laws were presented, ordered placed on record and printed in the programme for action at the next annual meeting:

To amend article V, Section 1, to read as follows—The first annual

meeting of the society shall be held at Buffalo, N. Y., on the first Tuesday of August, 1901. Subsequent meetings shall be held annually at such time and place as may be fixed by ballot at the morning session of the second day of each annual meeting and shall continue for at least three days.

To amend Article IV, Section 2, by striking out the figures \$25.00 and insert in place thereof \$50.00, meaning to increase the life membership from \$25.00 to \$50.00.

On Monday night the members of the executive board were guests of the Rochester Florists' Association at its second annual banquet. The entertainment by the association was much appreciated.

The following final resolutions were adopted:

"The executive board of the Society of American Florists desires to place upon record its appreciation of all the courtesies which have been shown by the Florists' Association of Rochester, and to recognize the spirit of hearty co-operation shown by the members thereof. We can confidently look forward to an unusually successful convention next August.

"We recognize the liberality of the chamber of commerce in placing at the disposal of the society the finest hall we have ever had for our meetings and exhibition entirely free of charge. We have enjoyed a most pleasant time at the banquet and are more than delighted with the cordial expression of the various local speakers.

"We leave for our homes with the conviction that the earnest workers of Rochester will do their full share in making the convention of 1910 a complete success."

H. B. DORNER, Sec'y.

#### Meetings Next Week.

**Albany, N. Y., April 7, 8 p. m.**—Albany Florists' Club, W. C. King's, 24 and 26 Steuben street.

**Buffalo, N. Y., April 5, 8 p. m.**—Buffalo Florists' Club, Saturn hall.

**Butte, Mont., April 8.**—Montana Florists' Club, Columbia Gardens.

**Chicago, April 7, 8 p. m.**—Chicago Florists' Club, Union restaurant, 111 Randolph street.

**Cincinnati, O., April 9, 8 p. m.**—Cincinnati Florists' Society, Jabez Elliott Flower Market.

**Dayton, O., April 4, 8 p. m.**—Dayton Florists' Club, 37 E. Fifth street.

**Detroit, Mich., April 4, 8 p. m.**—Detroit Florists' Club, Cowie building, 42-44 Gratiot avenue.

## Wants, For Sale, Etc

**One Cent Per Word, Cash with Adv.  
For Plant Ads., See Ready Reference Section.**

Where answers are to be mailed from this office, enclose 10 cents extra to cover postage, etc.

**Situation Wanted.**—By young man with twelve years' experience in seed business, both retail and wholesale; can furnish reference. Address  
Key 475, care American Florist.

**Situation Wanted.**—By grower of roses, carnations and chrysanthemums all pot and bedding stock, good designer. Address  
Key 479, care American Florist.

**Situation Wanted.**—As gardener; private; 25 years' experience; married; no children; ready for engagement April 1; best of references. Address  
MAX STEDLER, Oconomowoc, Wis.

**Situation Wanted.**—By young man, married, German, as carnation for man, will also take section; can show best results; state wages in first letter. Address  
Key 483, care American Florist.

**Situation Wanted.**—First-class designer, decorator and store man, with fourteen years' experience, wishes position in St. Louis or Chicago; can show good references. Address  
Key 484, care American Florist.

**Situation Wanted.**—As second gardener or single handed place; understands greenhouses, lawns and vegetables; best references: English; single. Address  
BURTON,  
13 Dixwell Ave., New Haven, Conn.

**Situation Wanted.**—As cut flower grower or working foreman thoroughly competent to take charge first-class rose, carnation and chrysanthemum grower, also the growing of all kinds of bulbs pot plants and bedding stock. Address  
Key 480, care American Florist.

**Situation Wanted.**—By A No. 1 grower of cut flowers and potted plants; good propagator; German 36 years of age; able to take full charge; have always made a success of it. Address  
EMERT RIGGEE,  
316 Capitol Avenue, North Lansing, Mich.

**Situation Wanted.**—By practical grower of cut flowers and pot plants in general; 20 years' experience in England, 3 years in Canada; private or commercial; married; middle aged; total abstainer. Address  
HENRY TUCKER,  
815 Queen St., Chatham, Ont., Canada.

**Situation Wanted.**—As foreman or grower by an expert grower having 12 years of experience in the growing of cut flowers, potted plants, handling of help to best of advantage; designing, etc. Excellent references, age 29; single; reasonable wages. Address  
Key 478, care American Florist.

**Situation Wanted.**—By competent grower of cut flowers and potted plants in general; willing to take charge; or as foreman in an up-to-date commercial place; 26 years in the trade; middle age; single, sober. Address  
Key 461, care American Florist.

**Help Wanted.**—Two young men as assistants in Roses \$5.00 per month steady position. Address  
Key 481, care American Florist.

**Help Wanted.**—Young man wanted who has had practical experience in the growing and packing of bedding plants; German preferred. Address  
E. ARLT, 3653 Dickens Ave., Chicago.

**Help Wanted.**—Helpers in rose houses, with some experience; \$30.00 to \$45.00 per month. State in first letter salary received in previous places and experience in the business. Address  
POEHLMANN BROS. Co.,  
Plant B, Morton Grove Ill.

**Help Wanted.**—Assistant single, about 25 to 30 years old on private place. Must be a good rose, grape and peach grower. No others need to apply. Must have good habits. Wages, \$40 per month and board; references. Address  
Key 476, care American Florist.

**For Sale.**—One brickset Furman boiler in good shape; 1 model No. 30-5 good as new, used two winters, very cheap if taken at once; will install larger one in place of the two. Address  
Key 468, care American Florist.

**For Sale.**—40,000 ft. of glass in good repair; fine location in northern Illinois city of 50,000. A bargain. Hot water heat; only house near principal cemeteries; is opposite main gate; best car line in city passes door; will rent or sell house and barn adjoining; a paying investment for industrialous man. Address  
Key 482, care American Florist.

**For Sale.**—11,000 ft. glass in city of 1,800, in the middle west, established retail business of 25 years; close to four large cities; one of the best locations in the country to build up wholesale business; owners are engaged in other line of business and cannot give greenhouse personal attention; present owners can handle entire output of purchaser; a splendid opportunity for live energetic man. Address  
Key 463, care American Florist.

**For Sale or Rent.**—40,000 square feet of glass, in good location; needs partial rebuilding; rent accordingly, or will sell at reasonable price. Address  
Key 460, care American Florist.

### New York State Floriculture.

ED. AMERICAN FLORIST.

I notice you have made some mention in your paper of the bill, now before the New York legislature, which provides for the building and equipment of a range of greenhouses at Cornell University for teaching floriculture. For the benefit of the readers in this state and others interested, the bill is reproduced below.

In order that the matter may not be overlooked in any way, I would suggest that every florist in New York state write his state representative urging early action in the bill. The state is doing considerable for the agricultural department and the florists should see that their interests are fully considered. A greenhouse plant of the character contemplated will be of immense value to the trade and every effort should be made now to get it well started. Write your representatives today.

WILLIAM F. KASTING.

### NEW YORK FLORICULTURE BILL.

In assembly, March 7, 1910.

Introduced by Mr. Wilkie, read once and referred to the committee on ways and means.

An act to build and equip a range of glass houses and service building for teaching floriculture at the New York State College of Agriculture at Cornell University, and making an appropriation therefor.

The people of the State of New York, represented in senate and assembly, do enact as follows:

Section 1. The sum of fifty thousand dollars (\$50,000), or so much thereof as may be necessary, is hereby appro-

riated for the purpose of building and equipping, at Cornell University, a range of glass houses and service building, suitable for experimental and teaching work in floriculture. Such buildings shall be a part of the New York State College of Agriculture at Cornell University, and shall be located on such portion of the land of the university as may be designated by the trustees of such university. Plans and specifications for such glass houses, service building and equipment shall be approved by the department of horticulture of such college of agriculture. Such buildings shall be built and equipped by such university and such appropriation shall be paid by the state treasurer on the warrant of the comptroller on the order of the treasurer of Cornell University, but no part of such appropriation shall be available, except for advertising and for plans, until such university has entered into a contract with a responsible party for the completion of such work within the amount appropriated.

Section 2. This act shall take effect immediately.

### Correspondence Course in Horticulture.

ED. AMERICAN FLORIST:

Perhaps the readers of your progressive paper will be interested to learn that correspondence courses for home study in agriculture, horticulture, poultry culture, domestic science and nature study are now provided by the South Dakota state college. These courses are for all the members of the farm family, for school teachers and everyone who wishes to learn.

The courses of study are planned not for financial profit, but to bring scientific and practical instruction within the reach of those who cannot attend college, yet are ambitious to

gain instruction helpful in their work and life.

Four systematic courses are offered in horticulture covering the subjects: 1—Vegetable Gardening; 2—Fruit Culture; 3—Floriculture; 4—Forestry.

Full information will be furnished free to any of the readers of the AMERICAN FLORIST on request.

A. A. BRIGHAM,

Director College Extension.  
Brookings, S. D.

### Crepe Chasing Again.

The following letter is reprinted verbatim from the Baltimore News:

"Kindly allow me space in your valuable paper to put forth a simple plea. We have florists in Baltimore who pursue disgraceful tactics to secure trade from the families of the dead. Hardly before the breath has left the body and the family have recovered somewhat from the shock, the doorbell rings and Mr. Florist asks to see some member of the family. He comes to extend his sympathy, saying he has known the deceased for some time, and what a fine man or noble woman he or she was, and concludes by asking for the order for floral designs. These professional 'crepe pullers,' for such they are, have very smooth tongues and can easily play on the feelings of the bereaved ones. They say they will give a design free as a mark of sympathy, and attach the price on any other orders they may receive. True sympathy is a soothing balm in time of trouble, but lying lips are as venomous as an adder. There is, of course, no law regarding this practice, but the people who are thus approached can readily put a stop to this evil. I believe many will agree with what I say. I am not a disgruntled florist or connected with that business." J. B. EDMONDSON.

##### PLENTY OF EASTER STOCK.

The heat of the few days previous to Easter cutting, combined with the fact that growers had previously been holding back stock, tended to an over full market for Easter, this being felt particularly in roses. A shade temperature of 82° to 85° in March and bright sun on the houses do not tend to quality in either carnations, violets or roses and the consequence was a whole lot of soft unsalable stock. Enchantress was so pale in many instances that this fine variety was quite unrecognizable, while the reds had that burned, rusty look around the edges of the petals that so detracts from their appearance. Really first class stock of carnations was none too plentiful and even of the poorer grades there was hardly what could be termed a glut, though telegraphic orders at low prices had to be resorted to in many cases to clean up. Long distance shipments sent out early could hardly be expected to reach their destinations in good order; the flowers in most cases were good when shipped but 48 hours in the cases, no matter how well they were iced and packed, would be safe to injure them and wholesalers who have had no "kicks" coming back this week have certainly been among the lucky numbers. Violets are in about as bad condition as it is possible for them to be. They fall to pieces on arrival, are soft and have by no means a sweet odor when unpacked. A few more days of hot weather would probably make the wholesalers so sick of violets that they will not want to hear the name until next October. All stock was weak at quoted prices excepting the cream of the freshly cut flowers. Where 8-cent roses were ordered 10-cent stock was

sent and charged at 8 cents, and so on through the list. But there was a great business done. The amount of stock shipped to out-of-town points from this market increases annually without a doubt and increases at a

O. P. Bassett.

bigger rate than most people imagine. Undoubtedly the wholesalers were wise in treating their customers well and sending them the best grades of stock they could for the money. Still, with all their efforts there was quite a lot

of stock in the ice boxes on Saturday afternoon, after the bulk of the holiday trade was over. Lilies cleaned up fairly well and though prices had to be shaded a little there were few complaints heard on this account. Pot lilies sold better than cut. Bulbous stock was simply a drug in the market. Great quantities of forced stock were sent in all the week and on the top of this were the shipments of outdoor flowers from southern points. We question very much whether some of the boxes were ever opened; certainly the flowers were never sold. Had the weather been normal for the season there would have been just as good a business at far better prices but—there is always a but.

The enormous amount of rose stock in the market this week has given wholesalers an anxious time. Were the weather such that long distance shipments could be made with safety it would not be quite so bad, but the temperature has been so abnormally high that shipping for more than a 12-hour journey is risky. A market loaded down with first-class stock of all kinds just about describes the situation and there is no relief in sight. Cooler weather is the only hope of salvation. Some cooling showers occurred early in the morning of March 30.

#### NOTES.

O. P. Bassett was married, March 21, to Mrs. Imogene Dickerson, widow of the late Chas. A. Dickerson, the well known hat man of Detroit. They were married at Santa Barbara, Calif., where Mr. Bassett has been staying and expect to spend the summer and fall in Europe. They will winter in southern California. Mr. Bassett celebrates the seventy-fifth anniversary of his birth March 31, and must certainly be described as one of the "young"

# We took care of all

of our old customers at Easter and many new ones in a very satisfactory way and it is needless to say that we can continue to supply you and to even better advantage, now that the Easter rush is over.

# VAUGHAN & SPERRY,

Long Distance Phone, 52-54 Wabash Ave., CHICAGO.  
Central 2571.

men of that age. He is remarkably active, plays golf with great zest and handles his automobile in a way that would be a credit to many a younger man. We sincerely trust that this couple will spend many happy years together.

The Easter display at the Lincoln park greenhouses was very fine and all Easter Sunday the houses were crowded with visitors who, apparently, took great interest in the flowers. Genistas and Cineraria stellata were the chief attractions in the large flowering plant houses with good azaleas, rambler roses, amaryllis and others. We noted a few pretty pieces of Phalænopsis amabilis and P. Schilleriana, while the quaint looking Vanda suavis and V. tricolor were also flowering freely—otherwise the orchid display was not very large. Outside there were signs of spring everywhere, the tulips and other bulbous flowers pushing up, the shrubs budding and in warm corners the crocuses made pretty bits of color.

Vaughan & Sperry moved great quantities of good stock at Easter, and in the better qualities had no flowers left. Growers who consign held-over stock to this house are likely to find their returns low, for they do not believe in sending out this class of goods to their customers and it is simply dumped on arrival. Nothing of good quality is wasted here, the demand from out-of-town points cleaning it all up. There was a distinct advance in the amount of business done over that of last year, though the increase was hardly in proportion to that of general business which has been very rapid here of late.

No excuse is needed in this time and age for the money spent on our parks. Those who are so short-sighted as not to see the advantage to future generations in the money that is being spent and proposed to be spent in securing outlying land to be eventually used for parks at the present low prices, or fail to recognize the greatly increased value of the land in their vicinity should have taken a tour around our parks on Easter Sunday and seen the younger and older generations disporting themselves. It would have been an eye-opener where it was badly needed.

The shipping trade from the J. A. Budlong store for Easter was exceptionally heavy and many customers from long distances have written expressing their satisfaction at the excellent condition of the stock on arrival.

## "The Busiest House in Chicago"

THANKS for your Easter business.

Keep right on coming.

Stock is fine and prices right.

Service—but you know all about that.

## J. B. DEAMUD CO.

51-53 Wabash Ave.,

CHICAGO

When the very hot weather of the past 10 days is taken into consideration this is all the more gratifying and shows the extreme care that is always taken with the packing. Heavy cuts of good quality are still arriving, especially in choice roses and carnations.

At Bassett & Washburn's Easter business came remarkably near that of a year ago, there being only about \$10 increase. Considerably more stock was handled, however, but prices ruled lower. Carnations held up well, but the enormous cut of Killarney roses forced values down. Red roses also sold well. The shipping trade was large but was in some measure hindered by the heat, growers in the territory covered having more stock than usual.

Poehlmann Bros. Co. did an enormous Easter business and cleaned up fairly well in all lines. The immense stock of Easter lilies ready was all used up, but there are still fine flowers coming in, while long stemmed Beauties are arriving to the tune of 12-1,500 per day. Killarney is in heavy cut about 12,000 per day coming in with fine carnations, valley and other popular flowers in large quantities.

Chester Strail, brother of Fred Strail, and who used to be in business with him both on Van Buren street and Jackson boulevard, is putting up for alderman, being the republican nominee for the Twenty-fourth ward. There is no truth in the report that Fred was leaving the Bohannon Floral Co. He is there and intends to stay.

Geo. C. Hartung, manager of the Kensington Greenhouses, reports the best business ever. He had lots of funeral work which moved a large quantity of Easter lilies, and he had

not a plant left. Prices were good and there was an excellent demand for flowering plants.

Frank N. Kenyon, of the Zenith Rustic Manufacturing Co., has been sending out a great variety of birch bark baskets in all shapes and sizes this season. He says that his sales have been fully equal to the best holidays on record.

The J. B. Deamud Co. is showing a great variety of spring flowers, including fine Narcissus poeticus, daisies, stocks and pansies as well as some grand mignonette. The usual fine stock of carnations is also to be seen.

E. H. Hunt reports a fine clean-up for Easter on everything except a few short roses and some bulb stock. The excellent stock of lilies was sold out clean and the same is true of the better classes of roses and other lines.

John Mangel has been suffering from trouble with his nose, some internal growths having to be removed. It has given him a good deal of pain, but he has been able to attend to business during the Easter rush.

An exhibition of illustrated books on flowers and landscape gardening opened in the public library March 28. The art room, where this is held, is open daily except Sunday, from 9 a. m. to 5:30 p. m.

John Lapes, of Cedar Rapids, Ia., was in town this week. The railway wreck in his vicinity gave him a lot of work, 15 funerals in one day being among the orders.

Zech & Mann had a fine Easter business and cleaned up well. Roses of extra quality and good bulb stock are being handled this week.

O. Friedman had a full-page advertisement in the Evening Post last Friday.

# Plenty of Stock for All Occasions

## BEAUTIES

We are cutting heavily on the long-stemmed flowers, and have plenty of the short and medium grades.

## ROSES No Better Stock in the West.

Specially strong on Jardine, Maryland, Killarney, Maids, Richmond, Fields, Brides, Kaiserin.

## Choice Carnations

Roses and  
Carnations  
A Specialty.....

WHOLESALE  
GROWER of CUT FLOWERS

The immense stock at Peter Reinberg's was sold out in nearly all lines. Knowing the danger in shipping in hot weather the flowers had been kept cut closely right along, consequently, when Easter came, there was no pickled stock to move, but an enormous amount of fine fresh flowers that sold on sight to local retailers and was just the kind for sending long distances. The Daily News describes Mr. Reinberg as a "quiet but efficient alderman," and as there is no republican candidate for alderman in his ward there seems to be no doubt as to his re-election.

The Inter-Ocean waxes merry on the subject of the park employes—who are now busily engaged in killing oyster-shell scale on the trees—wearing auto-goggles and other quaint uniforms to protect themselves and their clothes against the effects of the strong sprays used.

On Monday the store of E. F. Winterson looked pretty bare, the great stock of Easter plants and cut flowers being all cleaned out. "The biggest business ever" was Ed. Winterson's comment, though some of the later sales had to be at low prices, especially on plants.

Wendland & Keimel, of Elmhurst, have three houses 27x200 feet completed and ready for planting to White Killarney roses, this making 10 houses in all; seven are planted to Killarney and three to White Killarney. The new houses were built by J. C. Moninger Co.

Wietor Bros. moved their immense Easter cut with very little trouble, and report a fine business. Prices, of course, had to be shaded a little at the last, but they kept up fairly well owing to the quality of the goods offered.

The death March 29 of Otto Lucius, local representative of the Anheuser-Busch Brewing Co., gave the designers considerable work, much of which went to A. Lange, including the American Beauty casket cover.

Hoerber Bros. had magnificent stock for the Easter trade and a busy time. They sold up well on everything.

A. Lange's busy force on Saturday last included Mrs. Dawdall, formerly Miss Cassie Arnold, of Omaha.

John Kruchten has been showing fine, long stemmed antirrhinums during the week.

Yellow chrysanthemums are among the offerings at the A. L. Randall Co.'s this week.

There are "For Rent" signs on two former flower stores on North State street.

Visitors: W. S. Pilcher, St. Louis, Mo.; John Lapes, Cedar Rapids, Ia.

### Mt. Sterling, Ky

Graser & Humphreys used a blotter with some verses and other advertising matter to attract Easter business. The blotters were distributed two weeks before the festival in all the offices and stores of their city and they are well pleased with the results. This firm's Easter business has been very satisfactory. The verses used on their blotter are as follows:

You have all heard of Graser & Humphreys,  
Growers of choice flowers galore;  
They ship 'em from ocean to ocean,  
And bring them from far away shores.

They are planning for a big Easter business,  
And trust all the boys that have gals,  
Both married and single together,  
Will remember their fond, loving pals.

Cut flowers and plants they now offer,  
Choicest sorts I am sure all agree;  
Grown at home, they're cheap, without  
duties  
Of express charges or agents' fees.

Easter boxes the young ladies are talking,  
Blooming plants on the lips of the wives;  
And you get them at Graser & Humphreys,  
Sufficient is a word to the wise.

ROCKFORD, ILL.—J. J. Soper has purchased a 20-acre fruit farm in Roseburg, Ore.

#### EASTER A RECORD-BREAKER.

Easter trade was the greatest, most successful and satisfactory in all respects ever experienced in this city. Owing to the early date of the event, everyone was apprehensive of the weather. The growers were fearful of not being able to mature some classes of stock in proper time, and the retailers were very anxious for weather conditions favorable to both the shoppers and the safe delivery of orders; but to the surprise and delight of all, the weather conditions were most favorable, commencing with the first day of the week and continuing to and including Easter Sunday. This most propitious factor, coupled with that of the present general prosperity, brought the inevitable result—an unprecedented demand—and it is doubtful if any dealer was able to fully supply it in a proper manner solely on account of inadequate facilities for handling the stock and serving the public. A distinct feature of the trade was the advance purchases made throughout the week both for immediate delivery and for Saturday and Sunday. It is difficult to state which item of the great variety of stock offered was most popular. In some stores, where Easter lilies were fine plants they easily maintained the ascendancy. In others where, perhaps, the stock was of poor or indifferent quality the azalea would lead in the higher priced articles, closely followed by spireas and the finely grown plants of bulbous stock. Very few ferns or other foliage plants were called for. Many plant baskets were sold by a few stores that had prepared a splendid line. In cut flowers the violet easily led all other flowers in popularity. Sweet peas were in great demand and were the only cut flowers except violets that were short in supply. Thousands of carnations, roses and bulbous flowers were sold, but no fancy prices were realized because the visible supply so nearly equaled and in some cases exceeded the demand. There was an enormous stock sent in from the many growers in this vicinity and from distant points too, some regular and other occasional consignors to the local commission houses, and a practical demonstration of the "survival of the fittest" was omnipresent.

### NOTES.

The Michigan Cut Flower Exchange was a scene of the most active and extensive movement of both plants and cut flowers ever seen at one place in this city. This firm is developing a great shipping trade besides supplying more than nine-tenths of the local retailers.

B. Schroeter is the proud possessor of a new auto delivery which was initiated into service last Saturday and was a great aid in the rapid distribution of the greatest number of plants in his experience.

J. A. Briscoe, who for several years conducted the Wildemere Gardens at Highland Park, died March 25. Several florists furnished a great number of flowers for the funeral held March 28.

Mrs. J. F. Sullivan's health was sufficiently restored to permit of her presence at the store the past week, where she was warmly greeted by hundreds of friends after her protracted illness.

### Nashville.

Easter weather in this city was all that could be desired and yet, strange to say, there was a falling off in the volume of trade as compared with last year. In the early morning a visit to the market house found a splendid display of flowers. Nearly all the growers who had salable stock of any kind had either wagons loaded with flowers or stalls in the market. Trade did not open up early, but good sales direct from various greenhouses were reported. There were quantities of lilies, well grown and full flowered, which found ready sales. The leading growers had superb and abundant stocks and, as fast as the shelving was cleared, another big stock would be brought in to replenish. By noon the trade had become more brisk and continued to a satisfactory finish.

### NOTES.

With the Joy Floral Co. everything was in a state of activity and a small army of young men and women were kept busy with their customers. The store was a thing of beauty, with its hundreds of beautiful plants. Some very pleasing novelties were sold. Pot lilac, both white and purple, were well flowered and attractive, but the lilac is not as great a favorite here as in more northern lat-

itudes. In a very few days all our country gardens will be full of lilac, that far surpasses the best greenhouse grown. The plants were all sold, at a good price. The company also had fine rhododendrons which sold well. A particularly pretty arrangement was a green fancy basket with a lavender rhododendron bedded in lace-like asparagus and maidenhair, with a bow of lavender ribbon of a deeper shade on the handle. The basket was one of the first ones sold. Luxuriant plants of Baby Rambler were good sellers and but few were left at the end of the day.

Geny Bros. never had a better stock, and their store was filled with the choicest of pot plants, lilies, azaleas, hyacinths, cinerarias, tulips, valley and others in season. Their stock of fancy baskets was large and the sales on them fine. At the end of the day a noticeable thinning out of the baskets was very apparent. Some of these were very artistic and put up with excellent taste. Ribbons and gauzes were used effectively and added to the beauty of the designs. Quite a number of extra employees were necessary to wait on the trade.

Shortly before Easter the funeral of Dr. William Morrow made one of the largest of calls for flowers. Dr. Morrow was at one time the treasurer of the state and afterwards lessee of the state penitentiary, and a very wealthy man. His friends and those of his family were legion and hundreds of floral pieces were sent to the funeral. One of the most striking was a crown made of violets and yellow daffodils.

The growers had to contend with the exceedingly warm weather that prevailed for several days before Easter. Tulips and hyacinths, roses and other flowers opened out too full for perfect beauty. A novelty noticed was bleeding-heart, pot-grown and in full flower and ageratum was very attractive and, moreover, inexpensive. The largest sales were on plants.

STOCK PLentiful AND CHEAP.

This has been a lively week for growers and retailers alike. The weather has been unusually mild and resulted in flooding the markets with all kinds of stock. There was an abundance of everything the last few days. The warm spell of weather played havoc with single violets but the doubles held out well. The demand for good cut lilies was very heavy and many dealers ran short. Candidums were rather short in stem and supply. Carnations were plentiful enough for all purposes. The anticipated shortage of Beauties did not materialize as there was an ample supply. Cattleyas were in good demand and there was not enough to go round. Sweet peas are coming in quite heavy. Some of the larger growers are running very strong on peas and they will be glad to see the end of the violet season. Bulbous stock has been coming in unusually strong all the week. The favorable weather was a boon to both growers and street dealers and great quantities of stock were taken from the markets by the street men. Pansies and primroses are coming in heavy, and both sell well. Considerable double and single stocks came in and sold fairly well. Roses of all kinds were plentiful except good Richmond. Snapdragon, mignonette, etc., were all plentiful. Gardenias are coming in freely now from the local growers and the quality is good. Both -markets were taxed to the limit to handle the volume of business over Friday and Saturday. Everything seemed to go smoothly but the downward trend of prices was a little disappointing to the growers. The plant trade was satisfactory to all concerned. There was a shortage of large sized ramblers and gardenias.

### NOTES.

The various retail stores are unanimous in reporting the heaviest plant trade they ever experienced. The display of flowering plants was the most tempting we have seen. Cut flower trade is giving way more every

THE EASTER BUSINESS.

The Easter of 1910 is past. We can look back and say it was great or near great, or just plain ordinary as the case may be. In speaking with a number of people, some said it was very good, others said the same, but there was not much emphasis on the very; while many said, oh, it was just about as usual. All were agreed on the subject of the weather, which after all was the feature of the week and a most important factor. It was clear and mild every day and just a little too warm on Friday. In all our recollection we have never had such favorable weather. Frederick Hahman said it was almost unbelievable if one had not experienced it. As to what sold the best in the plant line, we will, as usual, give first place to the lily. The growers, as a rule, did not do them as well as usual. One grower said he believed that always in the winter the lily men got to thinking too much about the early Easter, and in order to make sure had placed the bulbs in the heat before they were properly rooted, and in consequence they set very few buds to the plant. It was given out that lilies would be scarce and most growers were able to secure \$12 per 100 buds and blooms for short stemmed stock that in years past would not have been accepted. This small stock, however, when made up into bulb pans, several pots together with 15 or 20 blooms, sold very well and was preferred by many to the taller stock. Azaleas were numerous and in most cases very well flowered; they were in great demand, particularly in the medium sizes. Hydrangeas were as popular as ever, but most of the stock offered was too short and squat, probably caused by the hard forcing. There was, however, some very fine specimens of hydrangeas which brought fancy prices. The pink ramblers were very popular, completely outclassing the old Crimson Rambler. Tausendschon is a most valuable addition to the list of Easter

plants. If well grown it becomes covered with a cloud of semi-double blossoms of varied shades of pink which, combined with the glossy green of the foliage, makes it well nigh irresistible.

The Robert Craig Co. had them trained as umbrellas, pyramids, globes, and natural grown plants, in from 6 to 9-inch pots, and dealers found them one of the best sellers. Genistas were good stock, but local growers do not, for some reason, give much attention to this lovely plant. Rhododendrons sold well. Bougainvilleas, however, were not such favorites as a few years back and hung fire. All kinds of bulbous stock in pans were handled in quantity. Lily of the valley in pots was scarce and was often asked for in the stores, but the small supply soon ran out. Spireas, Gladstone almost exclusively, moved very slowly. The pink variety is not a good forcing sort, as it is scarcely ever seen in good color. The cut flower demand could not be classed as strong, in fact, it was lighter than usual, except for violets, valley and gardenias, of which quantities were sold as flowers to wear. All the stock of these were well cleaned up before the demand was supplied. Roses, except the red ones, which sold well, to take the place of Beauties, which were held high, hung fire. On Monday morning the street gentry were offering Killarney with 24 to 30-inch stems at low prices, all stock left over from the Saturday previous. An immense quantity of cut flowers and plants were disposed of on the streets. Empty stores were stocked by many who took a flyer in the hope of coming out ahead. Most of them sold out fairly well, as did the street men, although in plants, large quantities were offered at prices that were much below cost on Market street on Saturday evening.

The commission men all claim to have done a satisfactory business. The Leo Niessen Co. is well satisfied, having a very large business. Violets, orchids and valley sold extremely well, as did red roses. Daffodils were also in good demand and, taken altogether, they moved a lot of stock and were much pleased with the outcome.

K.

## New York.

## MARKET OVERSTOCKED.

While an immense amount of cut stock was received and disposed of by wholesalers during the two days preceding Easter, the net results were unsatisfactory. Men old in the business agree that they never before saw so much stock sell so cheap at Easter. There was an immense stock, due in part to a week of bright and warm weather, and the arrivals of good, bad and indifferent stock were simply immense. The warm weather brought out many lilies before their time and they had to be cut, thus contributing to the surplus. There was also a great surplus of tulips and narcissus. There was complaint that much rose stock had been held back for several days and was practically unsalable. We do not propose to dilate on this feature, but merely to state that hereafter, the matter of holding growers' stock too long is likely to adjust itself. With an abundance of flowers, the fresh ones will sell. Forty dollars per 100 was the ruling price for special American Beauty roses, and they did not seem to be a swift proposition at that. Richmond roses sold well and very fine specials were about as good property as Beauties. Killarney was the leading pink rose, but much of the stock sold very low. There were instances where good No. 2 sold for \$1 per 100, and from that up to \$12-\$15 for specials. It is understood that there is always a little very special stock that brings a little more than the average. After the stress of the all-day-and-night business of Saturday, a leading dealer said: "Nobody seemed to want Bridesmaid roses this Easter; at least they never asked for them here." Another dealer, carrying a good stock of White Killarney, said that they were hard to move. An immense stock of carnations was sold at prices ranging from \$2 to \$4 per 100, the novelties touching \$5 and \$6. Good violets on the last call went much better than was expected. Many poor ones were on the market and they went to the street men at very low figures. The sales of orchids and gardenias were considerable, the remarkably fine weather going far toward helping out all stocks that are used in corsage bouquets. The plant and cut flower trade was both practically crowded into Saturday which made it harder for both wholesalers and retailers. Friday, March 25, was an unseasonably warm day. Whether it was that or other reasons, there was little doing in the retail stores, but buying began in earnest on Saturday, and continued, as to cut flowers, up to Sunday noon. There was an abundance of good plants; azaleas were very fine and sold well. There were also many fine pot roses, rhododendrons, genistas, ericas and other plants. Good lilies sold well, but it cannot be said that the average quality of lilies was anything to boast of. Well arranged tulips and hyacinths in pans of medium size went very well. There was a notable absence of many of the large and expensive plant combinations often seen in former years, although there were many good ones of moderate size and at reasonable prices. It would seem that the business must have been more satisfactory to the retailers than any other branch of the trade. They bought practically at their own figures, and the weather was ideal for delivering.

March 28.—There is the usual quiet in the market that always follows a great holiday. As an afterview it appears that while there is much dissatisfaction, conditions were quite as good as could have been expected, considering the great volume of stock.

March 30 (By wire).—Owing to the abnormally warm weather the market is thoroughly demoralized. Special American Beauty roses are selling at \$8-\$25 per 100.

## AMONG THE RETAILERS.

Outside of this city there are a number of people who imagine that nearly all the business is done on Broadway and Fifth avenue. We will agree that they are great business streets, but there are others. The retailers of Sixth, Columbus, Madison and Third avenues, as well as other streets and avenues, are also to be reckoned. On Sixth avenue, the store of Herman Kuhn was very noticeable. His store was finely stocked with plants and attracted much attention, and he had a fine business. Peter Bogart is another of the Sixth avenue dealers who always comes out strong at the holiday seasons.

A feature of the Easter trade was the plant auctions. John P. Cleary sold for the Fruit Auction Co. an immense stock of flowering plants and, as a rule, realized good prices. The auctions of Wm. Elliott & Sons were likewise noteworthy features of the trade.

One of the features of Saturday was the flowers seen at the funeral of City Magistrate Finn. The funeral was held from St. Peter's church, Barclay street, and there were 12 carriages filled with floral designs, some of them being of unusual size and beauty.

Myer, of Fifty-eighth street and Madison avenue, is one of the young men in the retail business who has been coming rapidly to the front in the past few years. His Easter stock was very fine and he had good business.

The firm of David Clarke's Sons has long been known to the trade as doing an immense family trade. They have a very large store and for Easter took large additional space for their plants and their business was very heavy.

Young & Nugent made a great display of plants and sold out well. Nothing in Twenty-eighth street attracted more attention than their window of pink azaleas.

Charles A. Dards' store is always well stocked and it was particularly attractive at Easter with the best things in plants, lilies, azaleas, bougainvilleas and roses being noticeable.

At Alexander McConnell's there was a great stock of fine plants, noteworthy being orchids in pots, hydrangeas, roses and ericas.

M. A. Bowe is in the theater district, but he can sell plants at Easter as well as great quantities of cut flowers.

## Baltimore.

## A GREAT EASTER.

Doubtless there never was a greater Easter in amount of sale and general distribution of products than that just passed. The whole population seemed taken with a frenzy for plants and flowers, and churches, homes, stores and cemeteries were decorated with every conceivable variety of seasonable examples of the skill and taste of the gardener and florist. Contributory to the general disposition for such display was the delightful weather. The week began cool, but by the middle the thermometer was touching the eighties, and everybody was outdoors. The impression had gone abroad that flowers would be scarce, especially lilies, but there never was such an outpouring of all kinds, sizes and varieties, as rushed into the market from Wednesday morning on. The bright sun and great heat brought out everything, and the stores, markets, street vendors' stalls and the Florists' Exchange were all simply inundated with roses and

lilies, carnations and jonquils, violets and freesias, all coming in as though the sluice-gates of some great canal of supply had been thrown open. Much of this material, it is safe to say, had been kept too long, and the consequence was there was much trouble in satisfactorily filling orders. Many orders came back, protested or annulled, and the time for diplomacy had arrived. But by mutual concession, patience and good temper, almost everybody was placated and silenced—if not satisfied—and no one but had enough for all calls. The perfection of weather for display and delivery, the great throngs on the streets of buyers, all contributed to the pleasure of doing business, so opposite to the experience which a cold, a windy or a sleety Easter is so apt to offer when its date comes so early as happens this year. From every location the same report comes in that it was "the best ever," and one pleased Charles street retailer printed a card on Easter Monday expressing gratitude for the appreciation by his patrons as shown by their generous patronage. A great deal more business could have been done by the Florists' Exchange in the line of shipping orders for plants had there been time for boxing or crating, but the rush of belated orders made the thing impracticable. The exchange on Saturday did probably the largest day's business it has ever transacted in a single day. The force was considerably enlarged, worked all Friday night and was pretty well worn out by Sunday morning. The same goes without saying of the retailers, who apparently neither stopped to sleep or eat.

Peter C. Erdman, a well-known and extensive grower on Dohler avenue, near Erdman avenue, lost his dwelling house and all its contents by fire on Easter morning. The family had not arisen and the inmates of the home had a very narrow escape from death. Some of the neighbors arrived in time to rescue the children who were asleep in their beds, but the house and furniture were practically entirely destroyed. The loss is something like \$5,000, the dwelling being insured, but not the furniture. None of the green-houses were injured.

John Cook and Mrs. Cook are making their way homeward by easy stages. After a stay of some 10 days in Cuba, they returned to Florida and have been stopping at the various points of interest. When last heard from they were spending a little time in the ancient and attractive city of Savannah. S. B.

GLOVERSVILLE, N. Y.—Richard Loeben has opened a store at the Windsor hotel.

PHILADELPHIA, PA.—A most attractive spring flower exhibition has been held at Fairmount park.

EASTON, PA.—Paul Kaffke has sold his business at Third and Church street to Arthur Kleinhans.

SAN DIEGO, CALIF.—Miss Kate Sessions has been at Paradise Valley sanitarium several months with poor health.—Geo. T. Otto has been confined to his home several weeks with sciatic rheumatism.

CHESTNUT HILL, PA.—The Horticultural Society held its annual spring exhibition in the library building at 8711 Germantown avenue, March 22. An interesting paper on "Bulbs and Their Cultivation" was read by F. J. Day and a general discussion followed. Carnations, hyacinths, cinerarias, tulips, narcissus and Easter lilies made up the exhibition, which was in every respect a creditable one.

SATISFACTION ALL ALONG THE LINE.

Easter, the time that all engaged in flowers look forward to with greater eagerness than to any other busy time of the year, has come and gone and all must concede that this was the most ideal week of any in a great many years. The whole week was pleasant, and at no time was there any necessity for wrapping lilies or azaleas, which invariably cause so much anxiety to the florist. Roses were plentiful and of good quality. Carnations were never better than this year, both as to quality and quantity. The varieties were good, Winsor, White Perfection, Beacon, and several others. Violets, while a little smaller than we have had, were of good quality and sold well. Lily of the valley was a great seller and with violets, orchids, pink roses, yellow roses, and in many ways its increasing popularity was very apparent. Orchids and gardenias had a good sale; also marguerites, sweet peas and pansies. The sale of original corsages in special colors was never as large as this year. In plants, lilies were none too plentiful, but of good quality. While W. J. Palmer & Son and S. A. Anderson had them in quantities, as did a few others, the majority of the growers were late or had short plants. Lilies from the Lake View Rose Gardens were good. Azaleas were good and budded nicely, selling well. Tulips in pans, also spirea, had their usual sale. Madeup baskets sold well, especially those with a rambler or an azalea that would not exceed \$5 in price, larger ones in special arrangements not selling as well. Sunday was as fine and pleasant as Saturday, consequently trade was good until evening. There is no doubt but that all are satisfied.

NOTES.

Miss Louise Faul, who has charge of S. A. Anderson's Elmwood avenue store, lost her father last week after a long illness. Chas. Faul was one of our leading furriers, with one of the best business records, until his retirement about four years ago. Since then he had taken things easy and tried to regain his health.

The next meeting of the Florists' Club will be the first under President Streit, when his committees for the year will be announced, and ex-President Slattery will read his paper on Color Harmony and let the members hear it when there is not so much excitement.

Robert Scott is not able to walk as yet, but is improving very fast. It is now about three months since he injured his knee.

Wm. Schoenhut, William street, had a pretty show for Easter, his new store showing to good effect.

R. M. Rebstock is in the procession with an automobile for delivery.

BISON.

Pittsburg.

BUSINESS BEST ON RECORD.

The old saying, a poor beginning oftentimes has a good ending, applies to Lent as the Easter business here and in surrounding towns was the best in years. The weather was ideal for the patrons of the posie business. Corsages of all kinds were turned out by the thousand. The volume of business done in cut flowers and plants exceeds any holiday of former years. The weather Thursday and Friday was very unsatisfactory to the wholesaler and retailer. The temperature hovering around 90° shortened the supply somewhat, as the effect was very noticeable on the stock, tulips and violets suffering most, great numbers of them being rendered unfit for use.

Price \$1.25 per 1000.

CALDWELL THE WOODSMAN CO.,  
Evergreen, Alabama

Quite a few pickled carnations were in evidence, but the intense heat quickly qualified them for the barrel. American Beauty roses were very much sought. Saturday found the market bare, consequently many orders had to go unfilled. The shortage on Richmond caused a rush for them. Saturday's violets arrived in better shape and cleaned up nicely, and by evening they could not be had at all.

NOTES.

Phipps conservatories in Schenley park, it is said, had the finest display of lilies, hydrangeas and azaleas ever viewed in this city.

F. H. Westhoff, Allison Park, who is a carnation specialist, is grading for some new houses, which he intends to put in roses.

John Jones has won the silk hat as his great masses of Easter lilies were objects of special admiration.

### St. Louis.

WARM WEATHER HARD TO COMBAT.

The week before Easter will be long remembered as the warmest in years, the thermometer ranging over the eighties. Bulbous stock suffered considerably, it being impossible to hold it back. Lilies became soft and it required great care to keep them in any kind of condition. Carnations held a stiff figure, four to six cents being the price. Roses brought from four to 10 cents. Violets, owing to the extreme warm weather, were almost entirely driven out of the market. Sweet peas, however, were in good supply at 35 cents to 75 cents per 100. Lilies brought 15 cents and lily of the valley four cents. There was a good demand for jonquills. Quite a large consignment of southern stock, outdoor grown, was received. Fancy ferns brought 25 cents per 100.

#### NOTES.

Werner Bros. have decided to erect two houses, 32x165 feet, this summer and intend to grow White Killarney, Killarney and Richmond roses. If these gentlemen prove as successful with roses as they have been with their carnations they will be a great help to this market.

C. Young & Sons Co.'s shipping trade on Friday was the largest in years. It looked like old times again to see Mrs. John Young at the store. We are glad to report her health as much improved.

Otto Sander presented Miss Florence Lawrence, the film artist, here for two days, with a handsome bouquet of Easter lilies, which she posed for the Easter picture in Saturday's Times.

J. F. Windt and wife will leave shortly for Europe. They will visit Germany and expect to be gone for four months. The business will be carried on by their son.

The west end florists report big trade with a large increase in the plant business. The sales of lilies and azaleas were very large.

W. J. Pilcher was in with Governor Herrick violets. This variety is said to stand the heat better than the California types.

The Wm. Smith Wholesale Floral Co. disposed of thousands of sweet peas and carnations from Kirkwood growers.

The Riessen Floral Co. disposed of large consignments of double violets and American Beauty roses.

Geo. Angermueller has a heavy supply of stock. Lilies and roses were handled in profusion.

From the outlook the spring glut will be large, owing to the very warm weather.

F. H. Weber had a very large business both in plants and cut flowers.

Never before in this city have the florists transacted such an amount of business as they have this Easter season. All the different establishments were filled up with the very best material in first-class condition and, as far as we can find out, by Sunday morning there was very little surplus stock on hand. Prices on all material were moderate.

J. B. Keller's Sons handle a white flowering broom that lends itself splendidly for basket decoration. The slender, whip-like branches, covered with pure white blossoms, are very pleasing and they attract popular attention. Michael Keller says that large plants grown to standards sell well as individual plants. This broom is sold by the Dutch growers as *Cytisus praecox albus*, but we suspect it is a form of the Spanish broom (*Cytisus albus*). Florists who have not handled this plant certainly ought to get it next fall. The new dwarf rambler rose, Mrs. H. Cutbush, has been grown quite extensively by this firm, and it has proved a popular favorite. It could hardly fail to be so, as the rosy pink flower clusters are remarkably pleasing. This firm has made a new departure in handling large rhododendrons, having bought, last fall, a consignment of plants of *R. fastuosum flore plena* about four feet in diameter, and the large bushes, covered with purplish lavender blossoms, looked splendid. Of course some of these are rented out at good prices, and others are sold to rich people at prices commensurate with fair profit. Michael Keller says they are well satisfied with the results, and he remarked today that this was one of the most strenuous Easter seasons he ever put in.

San Francisco Women to Raise Flowers.

San Francisco, March 23.—Orchids at \$1.50 each and roses at from \$2 to \$5 a dozen in a land of sunshine, where they can be grown at small expense the year round, have aroused the ire of the women of the "Four Hundred," and today they announced that they are going into the business of raising these flowers and putting them on the market at a reasonable price.

Seventy prominent women, headed by Mrs. California Newton and Mrs. William C. Ralston, and representing the California club and the Outdoor Art league have signed the articles of incorporation of the California Ladies Plant and Flower Co., capital stock, \$100,000. Mrs. Ralston said: "Orchids cost \$1.50 apiece. Just think of that in California! The Pearl of the Garden and our beautiful La France roses, do you ever see them now? No, they are not in the market. And the Rainbow rose or the Bennett? They are not being produced. But we will soon have the fine old varieties again."—New York Journal.

## The Seed Trade.

### American Seed Trade Association.

J. C. Robinson, Waterloo, Neb., Pres.; M. H. Duryea, New York, First Vice-Pres.; F. W. Bolgiano, Washington, D.C., Second Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas.; Leonard H. Vaughan, Chicago, Asst. Sec'y. Twenty-eighth annual convention, at Atlantic City, N. J. June 21, 1910.

THE unseasonable hot weather is almost sure to shorten the seed selling season disastrously.

THE question of fighting the recent ruling by the postmaster general regarding disuse of opaque seed packets is in abeyance.

CALIFORNIA seed growers were favored with nice rains all last week in the Santa Clara and San Juan districts, and the crops there are looking fine.

SAN JOSE, CALIF.—A flying tournament will be held here May 14-15, a good chance for local seedsmen to fly high. Eastern members of the trade should arrange their inspection visit accordingly.

CHICAGO.—Contract prices on the board of trade March 30 for grass seed were noted as follows: Timothy, \$4.60 nominal. White clover, from 20 cents to 25 cents.—Visitor: C. P. Guelph, of Jerome B. Rice Seed Co., Cambridge, N. Y.

HOBOKEN, N. J.—Henry Nungesser & Co. have been incorporated to deal in seeds, grain, etc., with a capital of \$50,000. The incorporators are: Henry Nungesser, New York; Geo. S. Mittendorf, New York, and Wm. A. Proescholdt, South Orange, N. J.

NEW YORK.—Henry Nungesser sailed for Europe, March 22. As a voyager on the Atlantic highway, Mr. Nungesser holds the record among seedsmen, having made over 50 trips, but that is his only dissipation.—Chas. McTaggart, who recently opened a seed store at 123 Warren street, is doing a good business and has already been compelled to take more space.

THE present high prices of soya beans, according to Vice-Consul A. A. Williamson, of Dalny, are probably due to the system of buying for future delivery from the Chinese farmer and the Chinese dealers in the interior, supplemented by the consequent failure of several important Chinese firms and the necessity for filling contracts at any price by the big exporting houses.

Growers for the Wholesale  
Trade Only.

**SAN JOSE, CALIF.**

### Canadian Seed Imports.

As Canada imported garden, field, and other seeds and bulbous roots valued at \$2,083,619 in the last fiscal year, Consul Frank Deedmeyer, of Charlottetown, has prepared some data in regard to this trade: The import of these articles has grown rapidly in the last 10 years, being in 1909 four times larger than in 1900. As shown by statistics, the United States furnishes practically all of the seeds and roots received by Canada from abroad. The market for these American products is capable of enlargement. Farming is undergoing a change in the maritime provinces and in lower Canada. The cereals for export are now grown in the west. In the east agriculture is becoming more diversified. The farmers aim at a variety of crops, raised from selected seeds. Cities are growing and market gardening is becoming more profitable every year.

As a means to extend the sale of seeds and roots in Canada it is suggested that American exporters exhibit the seeds and developed fruits at the agricultural fairs, held every fall in all sections of the dominion. These fairs, or exhibitions as they are more generally called, are held for counties and for provinces, and are much encouraged by the local governments and well attended. The dates when these exhibitions are held and at what points can be learned by American exporters on application to the American consuls in Canada.

The following statistics show the value of some varieties imported in the last fiscal year and the rates of duty on same: Free list: Annatto, \$223; beans, \$879; beets and mangolds, \$44,241; carrots, \$9,421; mustard, \$3,056; peas \$9,407; rape seed, \$10,867; turnip seed, \$30,335; mushroom spawn, \$2,101; and anise, anise-star, caraway, coriander, cardamon, cummin, fenugreek, and fennel, \$11,669. Dutiable: Clover and grass, \$855,440; garden, field, and other seeds for agricultural or other purposes, sunflower, canary, hemp, and millet seed, \$278,864; garden and field seeds, not specified as free, valued at not less than \$5 per pound, in packages of not less than one ounce each, \$21,761, all for 10 per cent ad valorem; and flax seed, \$1,326, duty 10 cents per bushel.

The importations from the United States were valued at \$1,932,047; from Great Britain, \$73,016; France, \$36,353; Germany, \$23,206; and from all other countries, \$18,997. The province of Prince Edward Island, known as

the Garden of the Gulf, has about 1,000,000 acres under cultivation. Intensive and diversified agriculture is carried on here by some 14,000 intelligent farmers, most of whom own the lands they till. They send their products to Quebec, the other maritime provinces, and to New England. Great attention is paid to variety of products and proper selection of seeds. American exporters of seeds and bulbous roots will find here a growing market.

### Those Lovely Seeds.

#### IN THE HOUSE:

Mr. Moss (Ind.)—We have in this item a large appropriation of the people's money voted away by congress, with the express stipulation that five-sixths of it shall be turned over to the members who authorize this expenditure to be sent out on their personal demand and without any accounting or report to any public authority. In the whole disbursement of this fund all the report that is required to be made by any authority is that the secretary of agriculture shall report the time, the place, the quantity, and the price of the seed purchased. Not even the varieties are demanded. And under this general provision I find that we are purchasing and distributing mustard seed.

What a benefit it must be in these days of high-priced food products, when American working men for the first time in the history of our republic are forming clubs and refusing to purchase plain articles of food on account of the exorbitant prices! What a favor, I repeat, it is that their representative in congress can send some of them mustard seed without cost to anybody except the tax payer! And while the clerks in the bureau of plant industry are busy making up packages of mustard seed the clerks in the division of publications are sending out circulars giving the latest scientific methods of eradicating mustard plants in grain fields. Bulletin No. 41 of the Department of Agriculture says that mustard is a well-known and very widely distributed weed pest and one which is very difficult to eradicate when once introduced, but that it can be destroyed by spraying with a solution of iron sulphate.—New York Sun, February 8.

### Imports.

During the week ending March 26, imports were received at New York as follows:

Wadley & Smythe, 179 cases trees and shrubs.

McHutchison & Co., 124 cases trees and shrubs, 18 cases plants.

P. Ouwerkerk, 122 cases trees.

Vaughan's Seed Store, 70 cases trees and shrubs, nine cases plants, one case seed.

Wm. Elliott & Son, 32 cases plants.

H. F. Darrow, 32 cases trees and shrubs.

C. C. Abel & Co., 12 cases trees, 22 cases bulbs.

Elizabeth Nursery Co., two cases plants.

Hussa & Co., one case plants.

C. F. Meyer, one case plants.

Morris & Wellington, one case trees.

Elm City Nursery, one case trees.

H. Nungesser & Co., seven cases clover seed.

J. M. Thorburn & Co., four bags seed. Wakem & McLaughlin, one case bulbs.

To others, 681 cases trees and shrubs, 559 pkgs. trees and shrubs, 417 cases plants, 12 pkgs. plants, one case rose trees, 346 cases lily buds, three pkgs, one case bulbs, 350 bags sunflower seed, 90 pkgs., 13 bags seed.

## Market Gardeners

### Greenhouse Vegetable Growers and Market Gardeners' Association.

C. W. Waid, New Carlisle, Pa., President;  
Franklin DeKleine, Grand Rapids, Mich.,  
Vice-President; S. W. Severance, 508 Illi-  
nois Life Building, Louisville, Ky., Secre-  
tary; M. L. Ruetenik, Cleveland, O., Treas.

GUELPH, ONT.—A. McMeans, head gardener at the Agricultural College experiment station vegetable department, has left to take up a similar position at Agricultural College, North Dakota.

### Seed Sowing.

Among the different gardening operations there is none more difficult than seed sowing. To get a man who can properly sow, both broadcast and with hand drill, all the various seeds is almost a hopeless task. The subject needs close study to avoid heavy losses, which may come either way by over or underseeding or by entire failure. Some operators would make us believe that the time for broadcast sowing is past absolutely. Such is not the case. There are times and subjects when broadcast seeding is very successful. The reason for this is very plain upon investigation. Broadcast seed is covered at varying depths, so that under almost all conditions a stand is obtained. If the weather turns wet after seeding, those seeds nearest the surface will sprout; if dry, the deeply buried ones will have their chance; while by the drill method, they are all uniformly covered, hence if the weather turns unfavorable for the depth at which they were sown the whole lot may be a failure. Old market gardeners know from experience that it is easier to get a stand of lettuce, spinach, radish or turnip by broadcasting than by drilling, hence the method is still in use. We do not like broadcasting, but admit its uses.

To operate seed drills successfully requires close attention. Where a very thin stand is desired, and a drill set very close, it will be found that after some time the machine has actually sifted the seeds by allowing the small ones to pass and rejecting the large ones and thereby reducing the stand for the last one-half. Some machines will not stand close regulation at all, as they choke up unless the flow is liberal. When this is the case, the only way out is to proceed rapidly, thereby reducing the time for the seed to roll out. Where land is too rough for nice work, such machines as have a two-piece coverer can often be made to work by removing one side of the covering device, thus allowing clods to pass. Another way to handle rough land is to precede the drill with a single wheel hoe, using one slim cultivator tooth to open a mark and roll the clods aside. This can be made to work where nothing else will. Soils that bake readily can be handled similarly by opening a slight furrow, removing the covering device entirely, and depending upon the roller to firm the seed without covering. This permits the weak seedlings to come up through the crevices. There can be no greater

mistake made than preparing land too fine, if it is liable to puddle and bake. A certain amount of roughness is absolutely necessary to keep such soils open.

MARKETMAN.

The Boston Market Gardeners' Ass'n.

The Boston Market Gardeners' Association held its annual field meeting in Watertown, Mass., March 19. The party, which numbered about 150, inspected the greenhouses of J. W. Stone, A. M. Davenport and F. E. Coolidge. After luncheon with Mr. Coolidge the party came to Boston in electric cars and held a business meeting in Horticultural Hall.

Following the meeting the association listened to an address on "Market Gardening," illustrated with ster-

## VAUGHAN'S SEED STORE,

25 Barclay St., NEW YORK.

84-86 Randolph St. and 202 W. Randolph St., CHICAGO.

"Spring Book for Florists." Ask for it.

William R. Lazenby of Columbus, O., delivered an address on "National Co-operation."

### Prices of Indoor Fruits and Vegetables.

New York, March 26.—Mushrooms, 35 cents to 50 cents per pound; cucumbers, \$1.25 to \$1.60 per dozen; lettuce, 90 cents to \$1.12 per dozen heads; tomatoes, 25 cents per pound; radishes, 3 cents per bunch; asparagus, white, \$5 per dozen bunches, green, \$4.50 to \$9 per dozen bunches; rhubarb, 6 1/2 cents per bunch; mint, \$1 per dozen bunches; grapes, Gros Colman, 85 cents per pound; peaches, \$2 per dozen. Beet tops, \$1 per bushel.

Chicago, March 30.—Mushrooms, 25 cents to 60 cents per pound; cucumbers, \$1.25 to \$1.50 per dozen; leaf lettuce, 40 cents per box; head lettuce, Florida, \$3.50 per hamper, Louisiana, \$5 and \$7 per barrel; tomatoes, 20 cents per pound; radishes, 50 cents per dozen; grapes, Gros Colman, 75 cents per pound; rhubarb, 60 cents.

POUGHKEEPSIE, N. Y.—Help has been very scarce with the violet growers during the Easter rush.

### The Versatile Woodbine.

Climbing plants may be placed in four general groups as regards the means for getting up in the world. Least specialized are the scramblers, such as the bed straw (galium) and certain climbing roses and brambles. These depend upon their recurved prickles to catch upon other plants and hold them in place, says the American Botanist. More successful are the twiners like the bean and hop that simply wind their stems about other vegetation. The rootclimbers are more common in the tropics than in our own region but they are not without representatives here in such forms as the poison ivy and the English ivy. The most highly specialized group comprise the tendril climbers. The tendrils may be modified stems as in the grape, petioles as in the garden nasturtium, stipules as in the species of smilax, veins of the leaf as in the pea, or even in the tips of the leaves themselves as in various tropical plants. As to methods of attachment, two forms are noticeable, one in which the tendrils wrap around the object, the other in which the tips spread out in sucker-like discs. This

latter form is usually developed when the plants climb upon rocks or the trunks of trees. Very few plants possess more than one of these methods of climbing but the common woodbine (Ampelopsis quinquefolia) is more fortunate. Normally it is a tendril climber, like the grape to which it is near allied, but on occasion it may develop adhesive discs and it frequently puts out roots like the poison ivy. Nobody seems to have investigated the subject to see if the three methods of climbing indicate three forms of the plant.

MANSFIELD, O.—The Berno Floral Co has been getting "in bad" with some of its neighbors on account of the smoke stack emitting too much smoke and soot.

## The Nursery Trade

### American Association of Nurserymen.

F. H. Stannard, Ottawa, Kans., President;  
W. P. Stark, Louisiana, Mo., Vice-President;  
John Hall, Rochester, N. Y., Sec'y.  
Thirty-fifth annual convention to be held  
at Denver, Colo., June 8-10, 1910.

A CITY NURSERY is under consideration at Seattle, Wash.

WE are indebted to Park Commissioner Philip C. Scanlan for a copy of the annual report of the St. Louis park department.

THE total exports of fruits and nuts from the United States in the last calendar year amounted in value to \$1,916,065; the imports, to \$34,604,000.

THIS looks just like a good imitation of no season at all in the nursery trade. Many kinds of shrubs and trees will be in full bud almost before they can be dug. A season apparently about 10 days or two weeks long. Many fruit and flower buds are coming out probably to meet a killing frost.

### Among the Newer Deutzias.

By crossing *D. scabra* with *D. discolor grandiflora* some fine novelties have been obtained. *D. discolor densiflora* is an erect-growing variety, with a floriferous character. The blossoms are white, suffused with rose, and, with the sulphur-colored anthers, create quite a pretty effect. Another fine variety is *D. carnea*, a delightful flesh-colored form, with rosy-pink reverse to the blossoms, which are of medium carmine bud coloring is very pleasing. *D. lactea*, a dwarf bushy hybrid, with grand panicles of blossom, and a clear milk-white coloring, is deserving of notice, while the dainty *D. stellata* is an exceedingly pretty hybrid, the flowers exhibiting a delightful blend of coloring, shading from palest pink to rosy-carmine.

Some exquisite beauties are now grouped in the *D. gracilis* section. There is the snow-white *D. erecta*, a hybrid between *D. gracilis* and *D. Sieboldi*, with dark green leafage, and pyramidal spikes of blossom. *D. campanulata* is a grand milk-white form, wonderfully free and effective in blossom. *D. candelabrum*, another *D. gracilis* x *D. Sieboldi* hybrid, is a delightful subject. The arching branches, clouded with innumerable clusters of creamy blossoms, makes an undeniably charming picture, and is well worth securing. In *D. carminea* we have another pleasing deutzia, with an arching habit, the branches being weighed down with the burden of rosy-hued blossoms. *D. eximea* and *D. rosea* furnish two more pink varieties to the *gracilis* group, while the large-flowered *D. venusta* with snowy blossoms like a miniature azalea, concludes a group of sterling forms of this favorite section.

Further, there is the Lemoinei group, of which the forerunner was the handsome white-flowered *D. Lemoinei*, a hybrid between *D. gracilis* and *D. parviflora*. The best of the section are *D. Avalanche*, a handsome snow-white hybrid with the close panicles of blossom crowding closely for the full length of the stems; *D. Boule de Neige*, a large-flowered showy white of great merit; *D. Boule Rose*, with pale rose blossoms, produced in large close clusters; and *D. Fleur de Pommer*, a notable pale pink form, clad

## A GOOD INVESTMENT

Evansville, Ind., Feb. 18, 1910.  
AMERICAN FLORIST Co.  
Chicago.

DEAR SIR:—I am using your Trade Directory and out of 4000 nurserymen we circularized only two circulars came back. I am enclosing these names as you may want to make the changes.

A. J. LOCKYEAR.  
New Edition Now Ready—Price \$3.00.

from base to summit with axillary corymbs of blossom. Both in bud and blossom it is delightful.

That other good work in connection with the deutzias is in progress is apparent in *D. kalmiaeflora*, a fine hybrid, with *kalmia*-like blossoms of a pale pink color; and in the fine *D. crenata magnifica*, a hybrid between *D. Vilmorinae* and *D. crenata candidissima plena*, which has been raised in Messrs. Lemoine's establishment at Nancy. *D. crenata magnifica* should prove to be one of the most popular flowering shrubs of the future. The pleasing habit, the wealth of double snow-white blossoms, and its delightful appearance, are certainly greatly in its favor. With such a pleasing novelty before us, we may rest assured that there are good things yet to come from the deutzias, and this knowledge should give a fillip to this most deserving race of flowering shrubs.—Gardener's Magazine.

### Semi-Double Peonies.

If the herbaceous peonies do not obtain so much attention in this country as in the United States, they enjoy a high degree of popularity, and are being grown in English gardens in largely increased numbers. That they are popular with lovers of hardy plants is not surprising, for they are varied in form and color, free in flowering, and highly effective when grown under the conditions favorable to their full development. There are the double varieties which bear flowers that at once appeal to the florist who regards plenitude of petals and a regularity of outline of primary importance, and there are the semi-double and single varieties which are much appreciated by those who prefer lightness and care but little for the "properties" of the florist. Each section contains

large numbers of varieties possessing much beauty, and those who grow peonies will act wisely in planting varieties for which they have a decided preference. If they do this they will derive more pleasure from their peony beds and borders than will be the case if they plant most largely those sections for which they care but little, because of their having allowed themselves to be persuaded against their will by some friend who holds very decided opinions. The varieties selected should, of course, be in all cases the best in the section, or rather the best that can be purchased at a certain price.

Attention has been directed to the desirability of cultivators planting the most freely varieties belonging to sections that give them the most pleasure, because in briefly alluding to the section bearing flowers with large clusters of petaloids in the center, it should not be thought they are recommended as superior to the other groups. It would not be difficult to write eulogistically of their varied charms; but this note is essentially of a practical character. Therefore, it will only be said that the clusters of yellow petaloids produce an exquisitely beautiful effect when seen in contrast with the crimson, rose, pink, or white guard petals.

The following comprise some of the finest varieties belonging to the section. Cendrillon cherry red, with pink and golden center; Her Grace, white with yellow petaloids; King of England, rich ruby, with gold and crimson center; Knight of the Thistle, deep crimson, with golden center;

## Origin of My Maryland Rose.

The Baltimore Star recently came out with a fine illustration of My Maryland rose and a description of its origin from which we cull the following:

"When J. P. Morgan was recently entertained in Baltimore by Gen. John Gill and dined upon the oysters, terrapin and canvasbacks for which the Chesapeake is famous there was a floral decoration introduced at that feast which made the beauty-loving Gothamites aware that our enviable possessions were not all of the material sort.

"Baltimore women are enthusiastic over the name and the beauty of the new rose; and everybody wants to know the 'How?' and 'Whence?' and 'Why' of it. Many have wondered whether the name was chosen before the rose was developed or whether it was bestowed by mere chance afterward. The facts of the case are most gratifying to our state pride, for the name was bestowed upon My Maryland rose by one who is only a son of Maryland by adoption, John Cook, and who, after having evolved by processes of hybridizing an incomparably beautiful and fragrant rose, decided that for such perfection and charm there could be no question about an appropriate name—in the eternal fitness of things it could be nothing but My Maryland, the home to which, after half a century of residence, he has grown so attached that he will never leave it to return to his native Frieberg, in Germany.

"And in coming from a Teutonic source My Maryland rose is but following the precedent of all the famous roses of the modern world, as the first rose ever cultivated, in the present sense of the word, was grown in the Netherlands and sent to England, from whence came all the old favorites of the tea varieties that bloomed in the colonial gardens of Maryland and those of a later period; and the new favorite is also of this kind, having been developed from two tea roses—Madonna, a pure white rose, and Enchanter, a deep pink one. The result of this combination could not have been more fortunate or typical.

"Not a red rose, nor a deeply florid pink, nor a colorless one of pallid white, but one that in its dainty tinting, elusive sweetness, beauty of form and grace of pose is most symbolical of the Baltimore girl and her sisters throughout the state's domain. A My Maryland rose must, of course, be beautiful; but it must, equally, have other qualities to round out its perfections. It is not only adapted to fashionable functions, where it has in the two brief years of its existence, made its way to the front and is pushing its rivals—Bridesmaid and Killarney—to the rear, but it flourishes in the home garden all the summer and will live and bloom outdoors in any part of the state. When cut it is a splendid keeper, the stems remaining stiff and upright for days, the buds opening very gradually.

"While it was the Morgan dinner that made the general public aware of the existence of a My Maryland rose, the rest of the world, as is often the case, knew of our treasure before we did; as it has been sought by growers in all parts of this country and by those of England, Germany, France and Canada. Indeed, the most patriotic daughter of the state must consider the new rose when she sees the actual blooms, beautiful enough to bear even such a glorifying name as My Maryland."

ANSONIA, CONN.—J. W. Willis opened a flower store in the Y. M. C. A. building March 21.

## The Landscape Beautiful.\*

This book is a series of essays by Frank A. Waugh, the well known professor of horticulture at the Massachusetts Agricultural College, at Amherst, and its sub-title seems to fit it so well that we give it in full: "A Study of the Utility of the Natural Landscape, its Relation to Human Life and Happiness, with the Application of these Principles in Landscape Gardening and in Art in General." Mr. Waugh has given us an unusual book, something quite out of the ordinary, showing how we are affected by the landscape. He says at the end of his essay on "Landscape and Life": "The doctors have discovered a new name for an old disease—nostalgia, which, translated into English, means 'we want to see our home again.' There were dark and terrible days for the men and women who went from New England to settle the great plains. Many a woman of gentle nature really died in the trial, and the great longing was not to see the old schoolmates nor even, in most cases, to see parents or brothers or sisters, but to look once more on the peaceful green hills, on the dark pine forests and the quiet clustering houses of the village in the valley."

And so on throughout the book Mr. Waugh shows that the landscape is the people's privilege, though capitalists and landed proprietors do their best to shut out even the schoolboy from his swimming pool or the pub-

SPRING "BOOK FOR FLORISTS!" ASK FOR IT.

## VAUGHAN'S SEED STORE,

NEW YORK.

All Plants f. o. b. Western Springs, Ill.

CHICAGO.

### Boston Notes.

The H. M. Robinson Co. had the banner Easter of its career and is already working on plans to increase the floor space of the establishment to keep pace with the rapid growth of the business. The new addition will include the several floors in the adjoining buildings, comprising over 14,000 square feet in all.

H. Capers of the Co-operative Market handled a fine variety of carnations over the Easter rush. The stock is all from the best growers and strictly fresh, a most valuable feature holiday time.

Wm. Tailby, of Wellesley, is a candidate for the office of selectman in his home town. William generally gets anything he goes after, so we have no doubts as to the outcome.

John MacFarland of North Easton is running especially strong on gardenias and valley. He seems to be the mainstay of the local market on these two flowers.

The Winsor carnations of John Barr would be hard to beat. They are coming in very freely now and are up to the Barr standard in every way.

The first iris of the season is coming from Wm. Patterson of Wollaston.

R.

### Philadelphia Notes.

The stores, in the main, report a good business. Pennock Bros. made up quantities of plant baskets; a gilt basket with a bunch of grapes ornament of plastic material, was a feature. A dull finish white basket was also a novelty and looked stunning when filled.

W. McKissick & Bros. kept all hands going day and night Wednesday and Thursday with shipping and later with local orders. They say they had a very successful Easter.

Ed Reid handled double violets by the hundred thousand. These are an Easter specialty with him and he is there each season with the goods. K.

### FRESH TOBACCO STEMS.

Bale of 300 lbs., \$1.75; ton \$9.00.

W. C. BECKERT, Seedsman,

103 Federal St., N.S., PITTSBURG, PA.

ATLANTA, GA.—Dr. Howell has disposed of his interest in the Atlanta Floral Co. to Messrs. Borg and Erickson of the Chattanooga Floral Co., who take possession April 1. Mr. Borg is now on the ground. The new proprietors expect to rent the Chattanooga place and give their entire time and attention to the new interests.

# Double Your Carnation Profits===Last Chance to Buy

The trade has certainly bought liberally of Carnation Dorothy Gordon this winter and spring—orders for rooted cuttings have taxed our producing capacity nearly to the limit, but we're proud of the stock we've sent out, and judging by their kind letters, our customers are pleased, too. And next winter, when all those splendid plants come to bloom and these florists begin to make money as they have never before made it from carnations, they'll be still better satisfied!

Have you delayed getting in your order for this magnificent new Carnation? If so this advertisement is addressed to you; we have just a few thousand more cuttings in the sand for April 15th delivery and when these are taken, no more will be available till next winter.

The merit of this splendid new variety has been thoroughly proved, and the only possible loss you can experience in the matter is to let this opportunity slip by and stick to the old sorts you've been growing in the past.

## Carnation Dorothy Gordon

Has a splendid pedigree, a long list of good qualities and an enviable record of prizes and awards. It is a seedling of Lawson on Enchantress, possessing the principal merits of these varieties without their faults. It is vigor in growth and is perfectly free from disease. Its flowers are a trifle darker than Pink Enchantress; they are borne in double the quantity, and are of exceptional size averaging over 3 inches in diameter. They are very fragrant and keep exceptionally well. The market price paid for Carnation Dorothy Gordon is regularly 50 per cent. more than that paid for Enchantress.

From the very first Dorothy Gordon has established a splendid

record as an exhibition variety. High awards were given it at the meeting of the American Carnation Society in 1908 and at the National Gardeners' Association meeting in New York in 1909. This season it has attracted much attention and has won further renown at the Pittsburg and Toronto meetings.

In order to give the trade a fair opportunity to test it thoroughly, we have from the first sold rooted cuttings at a price which would get it established everywhere. This low figure still prevails and the remaining stock will be sold at these prices: \$10.00 per 100; \$75.00 per 1000.

No further offers this season.

**JOSEPH HEACOCK COMPANY, Disseminators, Wyncote, Pa.**

### FUCHSIAS

There are none better than Little Beauty Lord Byron, Renan and White Beauty. Strong 2½ inch plants ready \$4.00 per 100 New Heliotrope, Miss Bernice a sport of Mme. Brunt and a great improvement on the latter 2½ inch \$8.00 per 100.

Katalog for the Asking.  
**SKIDELSKY & IRWIN CO.,**  
1215 Betz Bldg.,  
PHILADELPHIA, PA.

San Francisco.

After a lenten season which has been unusually quiet for the retailer, we are, at the date of writing, on the eve of Easter, which every one hopes will bring a rush of orders. The market of late has been so demoralized for almost all kinds of flowers, that they were disposed of for almost any price offered. Carnations in particular were a drug, being brought in in enormous quantities by the many Japanese growers in this vicinity. But with the close of the lenten season and a considerable shortening up of the supply the growers hope to be able to receive more remunerative prices in the near future.

#### NOTES.

At a meeting of the growers and wholesalers of this city and vicinity recently held at the office of E. W. McLellan & Co., it was decided to form a board of trade for the protection of its members against unscrupulous dealers. Almost every grower and wholesaler suffered more or less financial loss during the last year by the actions of certain firms here. Frank Shibeley called the meeting to order and those present proceeded to elect officers. H. Plath was unanimously elected president of the association and E. W. McLellan secretary. A committee on by-laws was then appointed by the president, consisting of the following members: F. Shibeley, E. Schwerin and P. Ferrari. After the signing of the roll by all those present the meeting adjourned until called by the committee for the adoption of the by-laws.

The MacRorie-McLaren Co. is very busy with landscape work, having quite a number of new places to lay out. A carload of glass is on the way from the east for this firm for the erection of a section of greenhouses at its place at San Mateo.

H. Plath had the finest lot of *Primula obconica* in bloom in the most brilliant variety of colors, some of

## JOS. H. CUNNINGHAM, Delaware, O.

FINDLAY, O.—J. J. Waaland is erecting a violet house.

ST. JOHN, N. B.—Homer S. Cruikshank says that trade was about the same as last year, roses and carnations being most in demand, with bulbous stock least salable. There was no appreciable increase in prices.

FREMONT, NEB.—G. L. Welch has just purchased 17 acres of the Dockstader land for an expansion of the nursery business.

CROMWELL, CONN.—August Poehlmann, Chicago, visited A. N. Pier-son's rose growing establishment March 9, during his eastern trip.

## GOOD, CLEAN, HEALTHY 2-inch Stock

We have the following in surplus stock, a few thousand to dispose of:

**ROSES** Per 100 Per 1000

**Maid and Bride**.....\$3.00 \$25.00  
**My Maryland, Mrs. Jardine and Beauty** .....\$6.00 50.00

## J. A. Budlong,

37-39 Randolph Street, CHICAGO.

SPOKANE, WASH.—The Hoyt Bros. Co. report a 35 per cent increase in business over last year with prices about the same. There were plenty of plants and cut flowers, especially violets. There was about an equal call for the various lines of plants, except cinerarias, which were not so popular. In cut flowers everything sold well except the bulbous stock which dragged somewhat. A good spirit prevailed among buyers who were looking for high grade stock.

## Cacti and Mexican Resurrection Plants

We are in the heart of the cactus country, and furnish the healthiest open-grown stock, over 100 varieties, to the foreign and domestic trade. 28-page illustrated catalogue of Cacti free.

**Mexican Resurrection Plants.** We are strictly headquarters for this plant and ship all over the world. Good-sized dormant plants, guaranteed to "resurrect." 1000, 10.00; 5,000 at \$3.50; 10,000 at \$8.00.

THE FRANCIS E. LESTER COMPANY,  
Dept. LS2, Messila Park, N. M.

## Pansy Plants

Large stocky plants in bud and bloom; the very best strain at \$1.25 per 100, \$10.00 per 1000; smaller plants \$2.00 per 1000.

**Stocks, Dusty Miller, Verbenas, Phlox, Alyssum, Heliotrope, Ageratums, Mme. Salleroi Geraniums, Asp. Sprengeri and Scarlet Sage,** fine plants out of 2½-in. pots, \$2.00 per 10; 300 for \$5.00; \$15.00 per 1000.

**Cabbage Plants** for field, \$1.25 per 1000.

J. C. SCHMIDT, Bristol, Pa.

Cincinnati.

GOOD EASTER BUSINESS.

Easter with all its trials and tribulations is past and reports from the wholesalers and retailers show that they were more than pleased with the volume of business done. The retailers claim that Easter trade was a trifle better than that of last year while the wholesalers state that shipping trade was not quite up to last year but the local florists bought heavy and by Sunday noon there was not much left in the wholesale houses. The most popular flower was the violet and not nearly enough were forthcoming for orders. In a great many cases sweet peas had to be substituted. Lilies and American Beauty roses were a little short of demand, otherwise there were flowers enough of all kinds to go around. A fine line of flowering plants were to be had, although the demand ran principally to cut flowers and we noticed on Easter Monday quite a lot of plants left over. Prices obtained were good and, taking everything into consideration, all fared pretty well and all are of the opinion, "We are glad it's over."

### NOTES.

Henry Schwarz is showing a new daisy that originated at his place about two years ago and of which he had a fine lot in bloom at Easter. The flowers are nearly as large as those of the Shasta and Henry has a good thing in this new variety. He will grow a large quantity of the same another year.

Moeller's Deutsche Gartner Zeitung, in a recent issue, devoted a full page to J. A. Peterson's Begonia Glory of Cincinnati, giving an elegant description of same, also showing a very good cut of a house of Adiantum Farleyense and one of the begonias in bloom.

Tromey's Flower Shop was very busy with funeral work Easter Monday, the whole force working all night. No getting around it, Geo. Tromey is a hustler and is building up a nice business. Nobody is more deserving.

Only seven bowlers showed up at the alleys on Monday night. No doubt the boys had not fully recovered from the Easter rush and were tired out and those that did come out had a good time at the club's expense.

The next meeting of the Florists' Society will be held in the club rooms, Jabez Elliott Flower Market, on Mon-

CHARLES H. TOTTY, Madison, N. J.

## JUANITA, (Wah-nee-ta)

A grand scarlet **Carnation**, with about a 3½-inch flower, well built up with a two-foot stem.

**Its Strong Points Are:** Abundance of large, high grade flowers at all times; stem very stiff with good habit in every way; keeping qualities are wonderful; burst blooms are rare. We have grown it 6 years and will still grow as many as we have now. We have never over propagated it, so its vitality is not impaired. Cuttings will be taken from flower stems which are the best. The color is so bright and rich it takes with every one. We have a very large stock. **Price:** Rooted cuttings \$8.00 per 100; \$60.00 per 1000. Special price in large lots. Unrooted stock half price. A discount of 5% for cash.

### Filling Window Boxes.

ED. AMERICAN FLORIST:—

Would you please tell me the best way of arranging window boxes?

H. M.

This is a fairly comprehensive query, for there are many excellent ways of filling window boxes, and tastes differ so much that any one of them may be thought best by some people. One of the simplest, yet most effective methods is to plant good white marguerites, S. A. Nutt geraniums and green or variegated vincas. The latter vines would, of course, be planted on the edges of the boxes and droop over them. The scarlet and white of the other plants make a bright and effective showing all through the summer. Dracæna terminalis, small crotons and Pandanus Veitchii, with a few brightly colored coleuses and iresines or alternantheras make a pretty foliage combination for sunny windows, but would not be suitable for shady places. Last season we noted some very pretty window boxes that had to be kept low, planted with Golden Bedder coleuses and Begonia Vernon, and there are many other schemes of planting that could be mentioned, all depending upon the plants at command. Owing to the small amount of room in window boxes, generally, the soil used must be good, and it must also be firmly placed, and during the summer feeding must be well kept up to maintain its fertility.

PEORIA, ILL.—James C. Murray has opened another store at 302 Fulton street.

## ASTERS and DAHLIAS.

Mention the American Florist when writing

NEWPORT, KY.—E. H. Fries, of Fort Thomas, reports fine sales on plants. Lilies were not plentiful and azaleas and bulb stock cleaned up well. Cut flowers sold well and altogether the business was about 20 per cent better than that of last year, helped by the very fine weather.

KANKAKEE, ILL.—The water tank on the 30-foot tower at the Schafer greenhouse fell March 24, crushing in one corner of the greenhouse. The loss will be about \$150. Fortunately the tower and tank fell away from the glass houses, only a portion of the debris causing the damage to the glass. The slipping of the stays to the tower is believed to have caused the accident.

HARTFORD, CONN.—All kinds of flowering plants and cut flowers were in good supply, more so than at any previous Easter in a long time. Weather conditions could not have been better, says John Coombs. Business was about 15 per cent better than last year with prices about the same. Plants and cut flowers were both in good supply. In cut flowers the greatest call was for carnations, violets and bulbous stock.

## Sheep's Head Brand

## Pulverized Sheep Manure

The Ideal Plant Food for Florists.

Write to-day for Prices and Booklet.

NATURAL GUANO COMPANY,

Aurora, Ill.

## Cattle Manure in Bags Shredded or Pulverized

Pure—dry—uniform and reliable. The best of all manures for the greenhouse. Florists all over the country are using it instead of rough manure.

## Pulverized Sheep Manure

Absolutely the best Sheep Manure on the market. Pure manure and nothing else. The best fertilizer for carnations and for liquid top-dressing. Unequalled for all field use. Write for circulars and prices.

The Pulverized Manure Company 32 Union Stock Yards, Chicago

CHAS. A. KRICK, 1164-66 Greene Ave., Brooklyn, N. Y. Long Distance Telephone, 178 Bushwick.

## Gold Letters

Gummed Gold and Purple Letters.

For inscriptions on Floral Designs. Best and Cheapest on the Market. Send for samples and prices.

J. LICHTENBERGER, 1586 Avenue A, NEW YORK. Telephone: Lenox 5644

## THE BEST WAY to collect an account is to place it with the National Florists' Board of Trade

56 Pine Street, NEW YORK.

WHY? Because many debtors will pay the Board leaving otherwise a bad rating in our Credit List. Full information as to methods and rates given on application.

## CUT FLOWER AND Design Boxes

All sizes, lowest prices. Write

C. C. Pollworth Co., MILWAUKEE

## Sterling Iron Reservoir Vases

Chairs, Settees, Hitching Posts, Etc.

Complete Catalogue and Discounts Upon... 91st.

The Sterling Emery Wheel Mfg. Co., OHIO, U. S. A.

## Wittbold

## Watering System

The saving in time and labor for one season will pay for a complete equipment.

For particulars write to

E. H. HUNT

76-78 Wabash Ave., CHICAGO

# Ready Reference Section.

# Ammoniated Lawn Lime

**Kills Weeds.**

**Makes Grass Grow.**

Applied as a light top dressing to lawns it kills all flat leaved weeds such  
as **Dandelion, Daisy, Plantain, Sorrel, Chickweed, Moss, etc.,** in 48 hours  
and without other fertilizer produces a wonderful, luxuriant, rich, green growth  
of lawn grass—which is distinctly noticeable 50 feet away.

The use of Ammoniated Lawn Lime supersedes hand weeding of lawns,  
putting greens, etc. It saves the grass from being pulled up and in many  
cases ruined. Grasses take a new vigorous growth, avoiding probable  
trouble in the future.

**Quantities:** If very weedy 1-lb. to 40 square feet, 25-lbs to 1000

## The Mastin Automatic Whitewash and Spraying Machine Is Reliable, Practical and Durable

The tank is made of galvanized sheet steel, and in brass.  
The pump is of brass throughout, simple and powerful.  
The mixing device keeps the contents of the tank well stirred up from  
start to finish.  
When the machine is filled to within six inches of the top, a few strokes  
of the pump will compress enough air in the tank to produce a continuous  
mist-like spray for 15 minutes.

All parts are made to gauge and may be had for repairs.

Ask your dealer about our **Extension Hose, Extension Rods,**

and the **Mastin Whitewash Nozzle** for Bordeaux mixture.

Sold through Seedsmen, Dealers in Florists' and Poultry Supplies.

**J. G. MASTIN & CO., 3124 West Lake St., CHICAGO, ILL.**

### Fruits Ripened by Chemicals.

The ripening of fruits is essentially a chemical process. Everyone is familiar with the fact that even the sweetest fruits may be sour or astringent until they are nearly ripe. When they are full grown, or "full" as the grower often expresses it, a gradual change occurs. The tannin, starches and other constituents of the fruits are slowly turned to sugars by a process akin to digestion in animals if, indeed, it is not exactly like it. This being the case, says the American Botanist, many experiments have been undertaken to advance or retard the ripening process. In fruits, such as the banana, that have to go a long way to market, they are usually picked before they are ripe, and, since they will carry best in the green condition, no effort is made to hurry their ripening. On the contrary the ripening process is retarded. At the end of their journey, however, it is often desirable to ripen them at once. This is accomplished in some fruits by exposure to the sunshine, or by heating. A writer in Science mentions a new and very successful method which consists in exposing the green fruits to the fumes of various chemicals. Benzoic and salicylic acids produce results at once, but the most potent agent thus far found is acetic acid. By exposing green dates to the fumes of this acid for 12 hours, the experimenter was able to ripen them in three days. Since the ripe fruit of the date deteriorates

Chas. T. Siebert, Baum & Beatty Sts., Pittsburgh.**

Grand Rapids, Mich.

There is no question that the Easter just passed was one of the most remarkable on record. First, it has been so unseasonably warm and dry, and certainly it was a good thing that Easter came so early, as lilies could not have been held back much longer. As it was, thousands just simply would not stand up, but drooped and withered with the excessive heat. It made deliveries much easier than other years as no wrapping was necessary. It has been the most successful Easter ever known here from every point of view, and a complete financial success. The warm weather made everyone think of flowers and they bought. A few more lilies could have been sold if they were to be had, but with this exception there was enough to fill all orders. Bulb stock sold well, and bulbs in pans went fast. Plants sold much better than in other years. Taking Easter as a whole the volume of business was at least one-fourth larger than that of last year. Reports are in from Henry Smith, Eli Cross, Alfred Hanna & Sons, Grand Rapids Greenhouse Co., Wm. Cunningham, Crabb & Hunter, J. Schols, Wealthy Avenue Floral Co., Crescent Avenue Floral Co., and H. Danhoff. All say they are very well satisfied. B. S.

CINCINNATI, O.—The Bloomhurst Floral Co. has bought the grounds made famous by W. K. Partridge, at Lockland. Some months ago, following an assignment made by the latter, who was ruined through a mail-storm wrecking his greenhouses, the property was bought by John Mueller, of Lockland. The latter has transferred his interest to the floral com-

### The Dangerous House Fly.

The following circular has been sent out by the Merchants' Association's committee on pollution of the waters of New York:

Flies are the most dangerous insects we have. They are much more dangerous than bees or hornets; these may sting you, and the sting is painful, but you soon get over the pain. Flies do much more harm than this. They walk over filthy places like sewers and garbage cans, and after eating the filthy food which they find there, they come into your house and walk on the food you eat, carrying on their feet the tiny germs which live in filth just as you live in a house. These germs are not only filthy and disgusting, but many of them cause such diseases as typhoid fever, Cholera infantum and summer complaint. When the flies bring them from some dirty place to your food or leave some of them when they crawl on your face or hands, you may swallow these germs without knowing it and be taken ill with one of these diseases. So the fly that seems so harmless may do you much more harm than a bee or a hornet.

Your parents should place screens at their doors and windows during the warm weather, to keep the flies out of the house. If they cannot screen all the rooms, they should screen those in which food is kept; and if anyone is sick in the house, flies should be kept from the sick-room, so that they may not carry germs from the sick person to the rest of the family.

Children may help to keep flies from swarming in and around houses, and from carrying germs of sickness from one person to another. In the first place, they should not buy candy, fruit or other food which is left in front of stores or anywhere else where flies may feed and walk on it. Flies lay their eggs chiefly in stable manure, and if this is left without screens or other covers to keep he flies away, great numbers will be hatched in every stable. If you know of stores where food is not covered from flies, or of stables that have swarms of them around, get your father or mother to write to the board of health about them, and the board will make the store-keepers or stablemen obey its rules. But before you report other people for being careless and dirty and so making it possible for flies to become a nuisance, be sure that your own house is clean and that no garbage cans or boxes are left uncovered to attract flies.

## The Allied Trades

Descriptive particulars—with drawings or photographs, if possible—of any new apparatus or device which may prove helpful to the trade are solicited for this department.

THE Auburndale Goldfish Co., Chicago, reports an excellent season in its line with the demand still good. Florists who carry goldfish, and the number is increasing steadily, say this is quite a satisfactory side line and one which fits into their general business admirably.

### No Nitrogen Famine Imminent.

In a recent letter to the Boston Transcript, W. H. Bowker refers to the nitrogen supply as follows:

"Do not get alarmed over the nitrogen supply. No 'nitrogen famine' is imminent, and none in my judgment, possible; it is unthinkable, for without nitrogen the world would starve—and the world is not going to starve this year, or 50 years hence, notwithstanding Sir William Crookes' prediction.

"Since Sir William Crookes wrote his book on 'The Wheat Problem,' some 10 years ago, there have been great strides made in the utilization of nitrogen from by and waste products, and also some recent discoveries touching the utilization of atmospheric nitrogen, which bid fair to be commercial successes; in fact, the fertilizer industry is now using a product known as 'lime nitrogen,' which is obtained from the atmosphere. They are also manufacturing on a commercial scale nitric acid from the air, in Norway, which is done there successfully and which can be done successfully wherever there is cheap and abundant electric power.

"Within a week, an optimist of the type of Colonel Sellers called at my office and showed me samples of nitrate of soda and nitrate of potash which he said were made from the nitrogen of Boston. They were the goods all right. I told him that if his process was commercially feasible and comparatively inexpensive, there were millions in it, and we would erect a monument to him on Boston Common. He is working for the millions, and will no doubt be pleased to have the monument thrown in; but if he does not succeed, some one else will.

"In addition to these new discoveries, great strides have been made in bacteria culture, which will insure the growth of clover and other nitrogen-gathering crops.

"I sincerely believe that even if we do not succeed in tapping the great reservoir of nitrogen in the air there will be no nitrogen famine, because of the organic and mineral sources still available, more especially, the nitrogen which is contained in coal and which is now being rapidly saved as a by-product in gas and coke works. There are coals which are known to contain as much as 30 pounds of nitrogen to the ton, and if it could all be saved, they would be worth more for nitrogen than as fuel."

STANFORD, N. Y.—Willard Heermans has purchased the violet house owned by Wesley Pink and took possession April 1.

PROVIDENCE, R. I.—The park commissioners ask for an appropriation for greenhouses in their annual report, saying that much money would be saved by raising their own bedding and other stock.

## Curved Eave

You see what a fine piece of construction this Curved Eave of ours is.

The roof bars are small, and the curved part is cut from the solid wood with metal backing extending to the sill.

The rafters are so narrow and neatly framed in, that you scarcely notice them.

The glass is 24 inches wide; the sill and gutter are combined in one.

It has proven such a success that most of our private orders are being built this way.

Send for our special Curved Eave circular.

## HALF HOUR CHAPTERS FOR FLOWER GROWERS

### Forget-Me-Nots.

The increasing heat and sunlight are not favorable to the health of forget-me-nots in the greenhouses, and where there are plants in frames or in protectors the indoor plants can probably be dispensed with pretty soon. If taken out now they can be used for propagating, but if left until mildew sets in then the growth is useless for the purpose. Many growers raise their plants from seed annually, but where a good strain has been developed by selection it is best to propagate by division, and early propagated stock stands a better chance of coming through the summer safely than late. It is early yet, of course, but towards the end of the month this stock may just as well be cleaned out and divided as not. The soil should be stirred around the frame plants and full air kept on, as the myosotis is practically a hardy plant and will not stand coddling.

### Flowers for Decoration Day.

There is every probability that flowers will be plentiful and cheap from now until Decoration day, and wherever it is possible stock should be held well in hand. With regard to roses, cut heavily for Easter, there would be time for a short rest and another start, but as a rule, at this time of the year there is no regular crop, the plants being in full growth, and there are flowers more or less all over the plants in various stages. The best thing to do is to run the houses as cool as possible, with ample air to harden up the growth and then, unless the weather proves unusually hot, the flowers will, at any rate, be of good quality. Carnations are bound to suffer more or less from the heat from now on, but the treatment as advised for roses is the best to follow. In the matter of inside bulbous flowers these will be all over, but there will probably be plenty of outdoor stock in some localities. A length of shading run over the beds will be of great advantage in keeping the color in the flowers. Ten-weeks stocks are popu-

lar flowers at Decoration day, and if good plants have been raised from seed and pricked out in flats or benches, these should be ready for planting on the benches in which they are to flower, and will come in on time. Stocks are easily grown in a cool house, but overwatering at the root must be avoided, also heavy syringing. Wallflowers should be treated similarly to the stocks, as these, too, dislike heat and moisture and do best in a house kept quite cool and with plenty of air on.

### Peonies.

Although where fall planting was neglected, peonies may be planted in spring with fair prospects of success, the plants do not get so good a hold the first year and the process cannot be termed satisfactory. When plants were bedded out in cold frames for the winter or potted and held over, then growers have a fair chance of success, for the plants will have made a certain amount of root and, if carefully looked after with regard to mulching in summer, they will grow well and flower a little. But one feels sorry for the peony roots offered by some seed stores. They are exposed in the store, or outside, during the day to rain and wind, which greatly reduces the amount of vigor in the tubers and consequently their chances of success. Wherever peony planting is to be carried out, the one important point is to have the soil in good order. It must be deeply worked and plenty of manure worked into the lower layers, for, in all probability, the plants will be a long time in the ground and must have a good, rich root run. A number of plants set out last fall and covered with a mulch of about three inches of straw litter are now pushing up strongly. We shall not disturb the mulch, as a considerable portion of it has decayed, while the remainder will act as a slight protection to the stems should cold winds occur during the present month, while if taken away it would expose parts unused to it to the cold and possibly damage them. During the time that frosts at night

are to be expected, hoeing, if done at all, should be carried on early in the day so the surface dries up by night-fall. Otherwise the damp soil turned up is likely to freeze and carry the frost to the stems.

#### Pansies.

The flowering pansies in frames must now be well ventilated in order to keep them hard, and the flowers will be better in color and substance now than they have been. If they show a disposition to throw smaller flowers and are weak in growth, give a top-dressing of rich soil or stir in a little good Peruvian guano or other fertilizer. Over-feeding is bad for pansies; it makes the flowers poor in substance and causes too free a growth, but a little given at the right time is a great help to keeping them going. Plants that have been wintered in protectors covered with litter have come through remarkably well. We have removed nearly all the protective material and it will all be taken away this week, the surface soil stirred and a little fertilizer applied. Where there is a demand for cut pansies all the year around, seed can be sown every few weeks, and sowings made now will come in for planting out in May in a cool position to provide flowers during summer. Pansies will not thrive in the full sun, nor do they relish the immediate vicinity of tree roots, but in a fairly open position where shade is cast from a distance they will do well.

#### Delphiniums.

When one speaks or hears of delphiniums they always think directly of the blue varieties. It is true there are others, but nothing that we know of in this genus can compare with the bright blues that are so plentiful and they are certainly the best for cutting.

When seed is saved carefully it comes fairly true to color; at any rate the varieties raised from seed will be good for cutting and there is no more beautiful herbaceous plant in existence for a display in the garden. If plants were raised from seed, as we have frequently advised in this column, they will be fit for planting out now and the sooner they are got out the better. Let them be planted in good, rich soil and they will grow away and flower practically all the summer long. Even when the principal flowers are over the smaller side branches are elegant in the extreme and fine for vase or table work. When grown simply for cutting beds about five or six feet wide should be laid out with paths between for convenience in cutting. In the herbaceous border proper for display they are best grouped well back. In any case plenty of good rich soil, watering until the plants have got a good hold and feeding liberally afterwards are the most important cultural details needed to secure good flowers.

JOHNSON CITY, PA.—A fire occurred at the Johnson City Floral Co.'s place March 19 but little damage was done.

SIoux FALLS, S. D.—Regular customers, according to M. M. Strong, are becoming very particular as to quality in cut flowers, and he finds it more and more difficult to dispose of imported stock, while in former years large quantities were sold. The Easter business this year shows an increase of about 15 per cent over last year with prices about the same. There were plenty of plants, but the supply of cut flowers was short. Azalea and rose plants had little sale. Bulbs in pans and ferns were very popular. All cut flowers sold out clean.

## THE RETAIL TRADE

### An Easter Window.

The accompanying illustration shows the Easter window put up by the Idle-Hour Nurseries, Macon, Ga. The background was of white cheese cloth and a colored curtain for the stained window in center. The altar was made of wood and covered with lavender cheese cloth with a small cross in center. On the altar an electric cross made out of wood and enameled white stood; on either side of the cross were candelabra of brass, and a ribbon stretched across with the words in gold letters, "Easter Greetings." The cross stood 3 feet 6 inches high and 28 inches wide. The altar steps were covered with white cheese cloth and brass vases were used in the window, filled with white carnations, Easter lilies and white roses. In the bottom of the window brass vases were used with pots of valley and Easter lilies placed in them. White ribbons were draped from the altar and lavender chiffon was caught up in the bills of two doves, suspended from the ceiling. The figure of a girl, kneeling at the cross, was draped in white silk, holding an Easter lily, with a white band around her head and a small spray of valley in her hair. The comments on the window were many and various.

HALIFAX, N. S.—F. W. Killam notes an increase in his sales this year over last at similar prices. Easter lilies were scarce, also carnations and violets and everything sold well.

SHAWNEE, OKLA.—A 20 per cent increase in sales is the report of the Brenner Floral Co. for Easter at better prices than last year. Ferns and palms did not sell as well as flowering plants.

## THE CARNATION.

### Carnation Culture in the Field.

The proper time for planting in the field will vary with the latitude, and the season, said W. T. Bell in a paper read by him at the convention of the American Carnation Society at Pittsburg, January 26-27, 1910, but should be done as early as it can be with safety; so that the plants may become established, and make some growth, before the hot weather of midsummer. If the young plants have been hardened in a cold frame, for some time previously, they may be planted outside sooner than if taken directly from the warmer greenhouse.

#### A GOOD TILTH NEEDED.

The soil in the field where the plants are to be grown should be of a loamy nature, and care should be taken to have it well pulverized, and free from stones, and other obstructions. If a horse cultivator is to be used, the rows should be two and a half or three feet apart, but if to be cultivated by hand, they will only require to be 18 inches apart and, in either case, the plants should be set about one foot apart in the rows.

A half-inch rope should be tightly stretched where the row is to be, and the ground should have a final raking and leveling, by drawing a fine-toothed rake along the rope, walking backward. Pressing the edge or cutting face of a common garden hoe on the rope, and walking forward with it in that position, will leave a fine mark to plant by when the rope is shifted and is better than trying to plant beside a small stretched line.

#### CULTIVATE FREQUENTLY.

The plants should be cultivated frequently, the soil kept in a loose condition and stirred at the proper time after a rain. No weeds should be allowed to grow and the stopping of the lengthening stems must be promptly attended to, if shapely bushy plants are wanted. No flowers or flower buds should be allowed to grow, or at least not until nearly time to transfer the plants to the houses.

#### IRRIGATION.

During long-continued dry weather, a properly arranged system for irrigating by means of perforated pipes may be used to advantage; and as the plants are all of the same nature, and the conditions likely to be uniform, the objections to such a system when used in a greenhouse where a variety of plants are grown, requiring varying amounts of water, do not apply.

### Carnations Outdoors in the Northwest.

Two years ago this spring Mr. Bornerman of Fife Floral Co., near Tacoma, Wash., took out his carnations to allow early tomatoes to make an early spring crop and they were a very healthy lot of Enchantress, White Perfection and Lady Bountiful at the time of removal. The weather was warm and favorable so he decided to plant them outside. He had plenty of space so they were put out with the best care he could to give them a chance. They were set

EASTER WINDOW AT THE IDLE HOUR NURSERIES, MACON, GA.

rather deeper than when inside. The spring being warm and favorable the growth was hardly checked. They made a very fine lot of new growth and promise of a good cut, which came on about as nice as the inside flowers. All the summer and fall they supplied a splendid lot of flowers in abundance. In fact it was a real success from every point of view and gave a supply of very good flowers until late frosts cut them. They were wholesaled at about the same price as indoor flowers and were no worry or care to anyone except to cut them. They were staked and tied at time of setting out, remaining that way until the finish.

Last spring Mr. Bornerman decided to do the same thing again. His plants were not quite so good—rather soft in growth. They were handled as in the previous instance. The season was very similar to the year before except the first night or two were rather frosty, not so bad as some nights were the previous year.

It happened that in about two weeks after they were put out we made a visit to his place and were shown the results of his labor, a lot of plants that were yellow and dead, scorched as though having been

through a fire. We don't know whether he will try it again—but we think he ought to. Practically it can be made a profitable success in this climate but the plants ought to be hardened off or protected for a time to insure success. Carnations will produce as fine flowers outdoors in this section as inside and we wonder why some someone does not handle a crop of an acre or two. They would bring nearly as much at wholesale through the summer and fall as the indoor grown flowers do in the winter. This is not guess work but we are certain it can all be demonstrated as a profitable fact. We expect to experiment some ourselves.

TACOMA.

FISHKILL-ON-HUDSON, N. Y.—Benjamin Hammond has issued to the Home Garden Brigade of Union Free School District No. 8 "A Call to the Colors" for 1910, offering a series of prizes for gardens and garden products.

PARKERSBURG, W. VA.—J. W. Dudley & Son report a 10 per cent increase in their Easter sales over those of last year at similar prices and with plenty of stock. In plants, hydrangeas, azaleas and lilies were leaders, bulb stock being the poorest seller in cut flowers. The fine weather made wrapping unnecessary and was ideal for trade.

## ORCHID NOTES.

AVOID overwatering calanthes now. They need very little until the young tiers of roots are running well through the new soil.

CATTLEYAS require at least a week to develop after they begin to open and they are finer and last longer than if cut before this.

DENDROBIUMS cannot thrive with their roots deeply embedded in compost. They like small pans or other receptacles in which their roots grow one over the other and crowding each other for space.

THE time of the great orchid show at Boston, Mass., is drawing near and there is every probability of a record breaking event. It is held at a time when orchids are at their best and the splendid prizes offered should stimulate growers to show what they can do. Our illustration is of the hall of the Massachusetts Horticultural Society where the show is to be held May 26-30.

### Dendrobiums.

Although from a commercial point of view the dendrobiums cannot begin to rival the cattleyas there is not a more beautiful genus in the whole orchid family. The deciduous kinds, such as *D. Wardianum*, *D. crassinode*, *D. Bensoniæ*, *D. Findlayanum* and the partially deciduous *D. nobile*, *D. Phalænopsis* and *D. formosum* are among the prettiest flowers of their season, while as exhibition plants there is nothing to compare with well grown and profusely flowered specimens of the evergreen section of which *D. thyrsiflorum*, *D. Paxtoni*, *D. densiflorum*, *D. Farmeri* and *D. chrysotoxum* are well known examples. The orchid hybridist was at work early in the field of dendrobiums and beginning with the

beautiful *D. Ainsworthii*, a cross between *D. nobile* and *D. aureum*, has given us a delightful series of hybrids, interesting to the student of the genus as a whole and among the finest and most showy orchids in existence. Then to the botanical student the small and inconspicuous flowered forms are extremely interesting, though there is hardly one of these, small as they are, that have not some good feature that makes them well worth growing and we have yet to see the dendrobium that we would think of throwing away.

While the cultural details vary somewhat with the different species, dendrobiums, as a rule, require much the same kind of treatment. They like a high, moist temperature and plenty of sunlight while making their growth and if this can be arranged with an abundant air supply so much the better. In an ordinary American summer hardly any fire heat is necessary from the end of May until September as the sun heat is sufficient and the house can be thrown open, a light shade during the hottest part of the season to prevent injury to the foliage being all that is necessary. The amount of dampening of floors and stages necessary, owing to the quantity of moisture dispelled by evaporation, is very great but early in the afternoon the house can be closed with ample moisture and the hot, moist conditions generated will be such that one can almost "see the plants grow." This is what they like and, until the last leaf can be seen forming in the new growths, the long stemmed deciduous kinds look for no other treatment. After this the grower has to look out for consolidating the growth, ripening it and preparing it for the winter's rest. In winter the temperature can be allowed to go down say to 45°-50° without any injury being done, a state of total rest being necessary for the deciduous kinds. About September

the leaves begin to turn color preparatory to falling and this is the time to withhold moisture and lower the temperature, both by degrees.

During winter the embryo flowers form at the nodes along the growths, but there is little difference in the early structure of a leaf bud and a flower bud and some growers, in their anxiety to have flowers early, push the plants along in heat and moisture at an early stage. This is frequently followed by growths from the nodes instead of flowers and it should be guarded against. Heat, unaccompanied by moisture, does not appear to have the same effect and when we have been anxious to get *D. nobile* in early we have frequently placed the plants in a night temperature of 70° in November. But we always take the precaution of hanging the plants up in a position where little moisture reaches them and always choose the best ripened plants. Even with this care many of the current year's stems fail to bloom but there is no great loss as they flower freely the next season. *D. aureum* also stands this early forcing well, but it is not safe with *D. Wardianum* and the nearly related *D. crassinode* or the showy and beautiful *D. Falconeri*.

With the evergreen kinds a little different treatment is necessary. They do not require so long a season of growth or so much heat as the deciduous species, though when only one house is at command they get along fairly well together by placing the evergreens at the coolest end in summer and giving them a little more shade. In winter we never dry these off entirely. Drying so severely as we do the deciduous kinds would cause them to shrivel and this is not advisable, often leading to an enormous crop of flowers but poor growth or none at all. Very early in our orchid growing career we had a peculiar experience of this with *D. densiflorum*.

MASSACHUSETTS HORTICULTURAL SOCIETY'S HALL, BOSTON.  
Where the Great Orchid Show Will Be Held May 26-30, 1910.

Some large old specimen plants were left in the same pots for several years and dried somewhat severely. They flowered at a great rate for two seasons, being literally covered with the golden yellow clusters of bloom as large as horse chestnut blossoms, but they never made another growth of any kind and we had to throw them away the third year as the bulbs shriveled up almost to nothing. This

leave the others for further consideration at another time. One point as to the treatment of all dendrobies, however, should be noted. They none of them like a lot of close heavy compost about the roots and all thrive best in small pans, baskets or pots with their roots crowding one another for space and fighting, as it were, for the advantage.

ORCHIS.

DENDROBIUM FINDLAYANUM.

was an exceptional case, of course, but it shows the difference between the deciduous and the evergreen kinds.

The Bornean and Australasian kinds, of which *D. Phalaenopsis*, *D. bigibbum* and *D. Lowi* are examples are again rather different in their requirements. None are strictly deciduous in our orchid houses, no matter what they may be in their native forests, but they all retain some foliage at least during winter. Although they rest for a considerable time they must not be severely dried and during the growing season, which is short and sharp and usually occurs in late summer, they must be kept close up to the light and have abundance of heat and moisture. Another instance of variability we may note in the very distinct *D. speciosum* and its variety *Hilli*. We never did much with flowering these fine plants until we put them in the open air in summer and kept them there until the growth was hardened and ripened, after which, and a winter's rest, they flowered most profusely. *D. infundibulum* and *D. Jamesianum* belong to the same section (*nigro-hirsute*) as *D. formosum*, but like less heat. Suspended from the roof at the cool end of the cattleya house they will thrive and flower splendidly, their beautiful pure white flowers with yellow and orange colored eyes respectively being among the most beautiful in the genus. This note by no means covers all that could be said about the varying forms of this splendid genus, but it is already over long and we must

#### Cattleya Gaskelliana.

*Cattleya Gaskelliana* is a summer flowering member of the labiata group coming in bloom after *C. Mossiae* is past its best and filling the gap between this and the autumn flowering *C. labiata*. It comes nearer to *C. labiata* than any other species and we remember when the latter was reintroduced some years ago that some

orchidists thought it simply a form of *C. Gaskelliana*, the old labiata having been lost to cultivation so long that they had despaired of ever seeing it. However, there is quite a little distinction between them. For one thing the habit is different and the double sheath on *C. labiata* is almost never seen in *C. Gaskelliana* or in any other member of this group.

*C. Gaskelliana* begins to grow quite early in the season and flowers upon the forming bulb, not resting in the sheath like *C. Mossiae*, *C. Trianae*, *C. Schroederæ* and others. The flowers are of fair size and quite as variable as those of any other species, ranging from nearly pure white to deep rose. It is of moderate growth and should be potted in medium sized pots in a rough open compost of peat and moss over good drainage. During the growing season keep it with the rest of the cattleyas and unless, as sometimes occurs, the plants begin to grow again after flowering, let them have the coolest, airiest part of the house to ripen and rest up in. Should they grow again they will probably produce a second crop of flowers in the fall and in this case *C. Gaskelliana* often proves a valuable species after the bulk of *C. labiata* is over.

#### Orchids from Seed.

It is a general practice among orchid raisers to keep in store until the turn of the days any seed pods that may ripen during the late autumn and winter. In the case of cattleyas, their allied genera, and most of the epidendrum group, this is good practice, but after the middle of January the earlier the seeds are sown the better. The increasing light, with suitable atmospheric conditions, will generally assist rapid germination, and where seeds are sown early there is less watering required than is the case if there is delay for a few weeks.

Those who are largely engaged in orchid cultivation have generally

WHITE FORMS OF CATTLEYA GASKELLIANA.

proper facilities for raising seedlings, and it is, therefore, to those who labor under less favorable conditions that I chiefly address my remarks. Experience has taught me there is no greater difficulties in raising orchids from seeds than is experienced among most other plants, and as a further encouragement I would point out that where the parent species or parent plants can be successfully grown, there should be no difficulty in germination, and in rearing the seedlings from them.

I am quite willing to admit there are considerable advantages in the early stages of growth where plants are assisted by up-to-date conditions, but the principal advantage that can then be claimed is the shortening of the period between seed sowing and flowering.

When sowing dendrobiums, cattleyas, epidendrums, sophronitis, etc., the seeds may be sprinkled thinly over the surface of moderately fresh potting compost containing plants of the same kind as the seed; all moss and material that would be likely to overgrow and choke the seedlings should first be carefully removed. Care must be observed to avoid washing the seed from the surface when giving water to the plants, as there can be no question that carelessness in watering, rather than any other cause, brings failure. The seed is so light that it is easily floated from the surface in the early stages, and carried over the sides of the receptacle, and thus destroyed.

A better method than sowing on the surface of the potting compost is to procure some pieces of linen, or strips of shading, such as is in common use for blinds on the roofs of the houses. Cut the pieces into 7-inch or 8-inch squares, spread one over the palm of the hand, and in it place some chopped sphagnum, mixed with a little sand; then by wrapping the edges of the linen tightly round the sphagnum, make the whole into a ball. Some suitably sized clean pots, that have been filled to about one-half their depth with drainage materials should have the linen-cased ball of sphagnum placed in the center; then fill firmly round the edges with finely chopped sphagnum to prevent the edges of the cloth from being raised up and the seeds being washed into the drainage. Water these with tepid rain water a few hours before the seed is sown. Sprinkle the seeds over the surface, and place in the warmest and most humid situation available, within reasonable distance of the roof glass. Keep the surface reasonably moist, but do not disturb the seeds when giving the necessary water.

Where a propagating case is available the seed pots may be placed therein, as considerable benefit is afforded the seedlings in the early stages where a case can be used. The warmer and more humid atmosphere, and regular temperature thus afforded conduces to rapid germination of the seeds. A cross section of a scaffold pole, or any deal roughly sawn, and soaked for a few days in the rain water tank forms a good seed bed. These pieces of wood should be about an inch thick, and shaped so as to fit into a pot. Fill the pots almost up to the wood with clean broken crocks, over which place a thin layer of finely chopped sphagnum, and place

the blocks thereon. Water previously to sowing the seeds, as this will assist in attaching the seeds to the wood. The disadvantages of this method are that very frequent waterings and attention are required.

In the case of calanthes, which ripen their seeds in a reasonably short period—about three to four months after fertilization—there is a difficulty in finding suitable seed beds. I think this seed should be sown immediately it is ripe. If the stock plants have been repotted the seeds may be sown on the surface of the potting compost. Where the plants have not been repotted select those that have started into growth, and make sure that the old compost is thoroughly wetted through before seeds are sown.

Cypripedium seed is best sown on the surface soil in pots containing cypripediums, but as seedling cypripediums are often found germinating under the stages and in various positions, it may be assumed that it is not altogether essential they should be sown in the position suggested. The raising of odontoglossum seedlings was a considerable mystery for many years, as only an occasional plant was procured from the thousands of pods of seed sown. Yet at the present time we find that odontoglossum seeds germinate more readily than those of any other class of orchids. The only reason that I can offer is the inclusion of some broken leaves in the potting compost. The seed is best sown on the surface of the potting compost of plants of their own kinds. I find it best to sow some portion of the seeds as soon as the seed pod bursts. The remainder of the seed may be wrapped in paper and placed in a light position in the odontoglossum house to complete its ripening, and be sown when ready. Select as seed beds surfaces of a lasting nature, as some of the seed may lie dormant for months, while others on the same seed bed will make rapid progress and be fit for pricking off in a few weeks. Seeds of odontoglossums must not be permitted to become unduly dry or they quickly lose their germinating power.—Gardeners' Magazine.

LITTLE ROCK, ARK.—Tipton & Hurst's sales at Easter this year showed a 25 per cent increase over those of last, lilies being the only short item. Carnations seemed to drag, though all stock was of good quality.

DENVER, COLO.—The Park Floral Co.'s sales at Easter were slightly above those of last year, with plenty of stock of all kinds. Bulbs and azaleas were slow sellers, but rambler roses sold well and violets were the best sellers in cut flowers. The very warm weather brought some stock along too early, but, on the other hand, nothing had to be wrapped.

WICHITA, KANS.—W. H. Culp & Co. say their Easter business was heavier than that of last year, at similar prices. Plants were just about equal to the demand, but many lines sold out clean, the demand being principally for flowering stock. Bulb stock was not wanted, roses, carnations and lilies selling best in cut flowers. Stock was difficult to hold for Easter, owing to the hot weather.

## WITH THE GROWERS

Reter Reinberg, Chicago.

Probably never in the history of the firm has the great range of Peter Reinberg, Chicago, looked better or produced more first-class stock than during the present Easter. Not one variety but all those in season have been in full crop and the quality of the flowers has been excellent. It is useless our going through the kinds grown for they have been frequently described but one or two struck us as specially good, one of these being Uncle John. This rose is largely grown here and at one or two other places around the city, but it cannot be said to be popular generally. As grown here it must certainly be a profitable rose for the flowers are excellent in every way and produced with the greatest freedom. It is a good seller and should be much grown. Perle is also largely grown here and is one of the most profitable roses in existence. Sunrise is in full crop and the appearance of the benches with the attractive foliage and the many beautiful flowers is superb. In short, all the roses are in the most perfect condition and a credit to all concerned.

Owing to the large number of connected houses here it is rather difficult to give My Maryland warmer treatment than the other varieties, consequently the winter crop of this excellent rose was not heavy but for some time it has been in fine form and is flowering now with the greatest freedom. In the American Beauty houses fine stems and foliage and flowers of good substance are the rule while the plants, as they always have here, possess a hardiness and vigor that is wanting in many places where less air and more fire heat are used. This, in fact, is typical of all the roses here, Foreman Collins being a great believer in fresh air, especially during the summer, and hardens up his plants and renders them capable of standing the winter strain of flowering and forcing. The young stock of Beauties has been far better this season than the carried over stock, consequently not so many as usual will be carried over this year, while 75,000 young plants have been raised and will be planted for next season's flowering.

It is the present intention to cut out Bride and Bridesmaid entirely this year and although Mr. Reinberg's ideas may be somewhat modified there is no doubt that these two old favorites will be grown in the smallest quantities next season. In place of Bride the popular White Killarney will be grown and 50,000 plants of it have been propagated already. Probably about 40,000 will be planted. Speaking of propagating this variety, Geo. Collins says that it roots much more freely than the old Killarney. The average percentage of White Killarney rooted is 98 but they are doing well with Killarney to get 70 per cent. At least 100,000 Beauties have already been potted and the cuttings rooted in February are now elegant stock, growing strongly and ready

for planting or for a shift. The plantings of *My Maryland* will be increased, as will those of Killarney, to take the place of Bridesmaid. Mrs. Marshall Field, or "Field" as it is now termed in the growers' vernacular, is just starting in for the summer and the benches devoted to this fine hot weather rose are very promising. Immense numbers of roses in all the popular varieties have been propagated for the shipping trade as well as for home planting and propagating is still going on. Both grafted and own root stock is raised and among the hundreds of thousands of plants spread out on the benches there is hardly a poor one to be seen.

Chrysanthemums are also largely grown for the shipping trade as well as for home planting and big batches have already been potted. Among the varieties being worked most largely we noted *Monrovia*, *Polly Rose*, *Virginia Poehlmann*, *Pink* and *White Touse*, *Ivory*, *Halliday*, *Golden Glow*, *Maud Dean*, *Yanoma*, *Nagoya*, *White* and *Golden Chadwick*, the *Bonnafons*, *Estelle*, *Bigelow*, *Opah*, *Appleton*, *Dr. Enguehard* and a number of pompons, including *Garza* and *Mrs. F. Beu* in a number of different shades. The plants are all grown cool and hard, thus insuring their success when shipped to other places. The new carnation range is in splendid order now and only sufficient stock for shipping trade is propagated at the lower range. These plants are already potted and stood well apart and are hard, vigorous stock in the best of condition in all the leading commercial sorts. Returning to the new range the quality of the carnations sent from here to the down-town store is remarkably good, the flowers large, of excellent substance with long, stiff stems. Some idea of the quantity grown here and the way the plants flower may be gleaned from the fact that the Easter cut from these houses amounted to 50,000 first class flowers. The section devoted to *Asparagus plumosus* is producing well just now and as good greens have been on the scarce side of late and the cut has been 200 bunches per day during the scarcity this must be described as a pretty lucky strike.

#### Lager & Hurrell, Summit, N. J.

The range of Lager & Hurrell is strictly a home for orchids and the many branches of that ever interesting family that are there seen are a constant source of interest to visitors. While it may be, as has been said, that the word "specialist" has been somewhat overworked, it is entirely appropriate when applied to this firm. They are specialists in orchids in all that the term implies and a visit to their range fully confirms this statement.

The well known cattleyas, cypripediums, dendrobiums, odontoglossums, oncidiums and phalaenopsis are all found in profusion and under most favorable conditions of growth. There are in addition, many other varieties, that, if they do not enter so largely into commerce, are valuable acquisitions to the conservatory and of great interest to the fanciers.

There is always something new and interesting; always novelties and visitors always receive courteous treatment. The members of this firm are authorities on the habitat, growth and care of the many varieties of orchids and their range houses a most notable collection.

## THE ROSE.

### Preparing the Compost. ✓

Now that the weather has opened up, and permits of some of the outdoor work being done, the grower who did not take advantage of the fall of the year to get together enough soil for the compost, should lose no time in doing this work before the grass gets too much of a start, and in order to work the soil over several times after composting it, which will consume considerable time, hence no time is to be lost. The method of preparing rose soil for indoor planting has been mentioned very often in these columns; at the same time it may not be amiss to go into a few details concerning the work again for each season there are always a number of growers just starting out that a few timely suggestions would perhaps benefit; so we will for this reason especially go over the ground again.

In the first place the soil is a great factor in the production of high grade roses and the better the soil the cheaper the stock can be grown in reference to the amount of manure used in mixing the compost, and afterwards when it becomes necessary to use liquid manure or top dressing. If a very light sandy soil is used, one has to be continually building it up throughout the entire season, and as manure (especially good cow manure, really the only kind to use) isn't the easiest of things to procure at all times, it becomes necessary as a matter of economy to procure the best of soil. What we would consider a good rose soil for the average varieties of roses now being grown commercially (for instance, Killarney, *My Maryland*, *Kaiserin*, *Bride* and *Bridesmaid*) would be soil comparatively heavy, containing considerable clay and friable.

Without question a good heavy sod of several years' standing will add the fiber which goes a great way towards making up the ideal rose soil. The soil should be capable of producing fine crops outside if one must expect much from it indoors. It is seldom one finds soil too heavy for own root stocks if taken from high, well-drained ground, and for *American Beauty* it must be a soil containing considerable clay. We have often noted that soil that produced fine crops of wheat invariably produced good Beauties indoors; in fact all roses did equally as well if on their own roots; on the other hand we are inclined to lean toward a rather light soil containing considerable sand naturally for best results with grafted plants. They are gross feeders and require a soil that can be watered frequently, and with suitable soil all grafted stocks are quick producers and somewhat stronger than the own root stocks, giving both what they require in the way of soil.

There are two popular methods of preparing the compost, and both are excellent in their way. The first, as one of our successful growers described, some time back, where an enormous quantity was handled, was to select a level piece of ground convenient to the greenhouses, clean it off nicely and cart the sod on it to a depth of six or eight inches, spread the manure over this and pulverize the whole with disc harrows. This seems to be an excellent plan for large establishments. But for the grower who has only from 25,000 to 50,000 feet of glass, the old method of making a rick of soil is perhaps the most practical and for the novice it will be found more systematic, and accuracy in the mixing is more easily obtained. In order to handle the soil in this way, clean a piece of ground near the houses to be filled. Round it up some, so that no surplus water will settle around the soil pile and pile the sod up in layers, grass side down, placing the manure between each layer of sod. The stack or rick of soil should have gradually sloping sides, coming to a point at the top so as to shed the rains. We advise using extra help in doing this work, even on a small place, so as to get it finished up within a few days.

First, see that the cow manure is placed conveniently for mixing, and it should be turned several times if possible before using, throwing out any rubbish the manure may contain. Start the rick by placing a layer of sod about six inches in depth, then sow some good ground bone over this; over the ground bone a little of the loose soil can be scattered, then a layer of manure. We have found that if the layer of manure is a little less than the soil in bulk, that it, after settling, amounts to about one-fourth of the entire compost. The compost, if good soil is used, should be mixed one part cow manure to three parts soil and about a long handled shovelful of ground bone to 100 square feet of surface. More can be added later when chopping it and turning it, just before bringing it in, if desired. After the soil has been left standing for two weeks or so, it should be cut down and fined up as much as possible and left in the same shaped rick so as to shed water; the size of the rick can be anything the grower desires, but a rick 12 to 14 feet wide and five or six feet high will be found handy, as it can be made any length. Of course it all depends on the quantity to be used, location, etc. But either way described here will be found practicable. Last, but not least, turn the compost as many times as possible before filling the houses to insure a thorough mixing. E.

ROSWELL, N. M.—The Alameda Greenhouses report that their trade was greater by 20 per cent this Easter than last, at prices about the same, and plenty of stock to go around.

SPRINGFIELD, Mo.—W. A. Chalfant says that his Easter sales this year were greater than last, but that funeral work helped the returns, three funerals in one day and 26 orders from one of these making a lot of extra work. Lilies were scarce and higher in price, all other flowers being about the same.

**To Be Done Now.****IN THE GREENHOUSES.**

When throwing out the roses hold out a few of the best plants and plant them up outside. They may come in useful for filling up gaps in the benches later.

A heavier shade will probably be needed now upon the fern and palm houses, especially where there is much young stock.

Be very careful with all young stock not to allow it to stand so close that it is crowded. Drawn, weak plants of any kind are much inferior to stock stood well apart.

Pot on all young seedling stock before it gets hard in the pots or the growth will be checked.

Shelf brackets attached to the roof supports with shelves laid on give much needed room at this time of year for small bedding and other stock.

Keep an eye lifting for green fly, especially when the wind is cold outside, and fumigate on its first appearance.

Repot any old azaleas that are to be kept over as soon as they go out of flower and place in a cool, moist house to make their growth before going outdoors. Pot firmly.

Keep tomatoes in pots until the first bunch of flowers have set if possible, as they are less likely to run away to wood afterward.

Do not dry off the cyclamens after flowering if they are to be kept over. Keep them growing gently in a cool frame or house until the natural growth is finished.

Leave no litter or untidy plants or flats around the houses. Every inch of space is valuable now.

Mme. Chatenay and Mrs. Jardine roses are more sensitive to sun heat on the foliage than most others, and easily burn if there is not ample air on. A light shade should be given now if this can be done without unduly shading other kinds.

**OUTDOORS.**

Keep full air on all herbaceous stock in frames now night and day, and get all planting finished up as soon as possible.

Begin to kill the weeds early. When they are small a light hoeing will annihilate weeds that a week or two later would be hard to kill.

Use the greatest care in pricking up herbaceous borders not to damage plants that are just pushing through.

Never sow lawn grass seed on a windy day or probably much of it will be blown away. Where sparrows are plentiful it will probably have to be covered.

Push forward with all planting as rapidly as possible, as the longer trees, shrubs and other plants are out of the ground at this time of year the worse it is for them.

The soil has seldom been in such good condition for seed sowing so early in the season and all the hardy kinds should be got in without delay.

Old clumps of herbaceous subjects, full of twitch or other perennial weeds are useless. They should be thrown away and young, healthy seedlings or other stock used instead. If of rare varieties take off some of the outside portions for propagating.

The soil is very dry in some places and considerable watering of newly planted trees will be necessary.

Plant gladiolus bulbs as soon as they come to hand. A moderately light and rich soil is best for them.

Keep the hoe going early in the day among the herbaceous plants that are already growing, but avoid hoeing among any tender stock late in the afternoon.

**Caladiums of American Origin.**

The following is a selection of the finest caladiums of American origin:

Hildegard Nehrling (N.) A hybrid between Uberabinha and Gaston Chandon. One of the most beautiful and distinct of all caladiums and grand for massing. Stands the sun well in rich moist soil, in fact it is much brighter in color in rather sunny positions. Ground color pure white, mottled and clouded pea green, deep red midrib and veins. In shady places almost pure white; in sunny situations the entire leaf soon seems to be saturated with deep pink.

Bertha S. Eisele (M.) Pure snowy white center, green edge, the white being covered with a limited number of large blood red spots.

George Huster (?) Beautiful red center, yellowish white border, spotted here and there with large moss green blotches.

Mrs. Theodore L. Mead (Mead.) A new and distinct color. Deep olive

The Late Mrs. Sarah E. Smith.

green, with numerous deep red spots edged golden yellow, center golden orange densely freckled with minute blood-red spots, very glossy.

Coacoochee (Mead.) Bright light rosy-red, sometimes changing almost to pure white, bright red ribs, green border. When full grown this is a gorgeous variety. In poor soil it is almost entirely green with red ribs.

Adolph Jaenicke (Jaenicke) Ground-color milk white with pure white spots; main ribs and narrow zone very deep crimson. Very distinct and effective.

Emerald (Jaenicke.) Glossy golden green, wavy leaves. Glowing orange-scarlet center, bordered golden yellow, ribs vivid red—this color runs in broad stripes into the upper lobes. Brilliant.

TAMPA, FLA.—A destructive fire in the Tampa Floral Co.'s plant and sickness in A. Ficke's family checked the Easter trade here considerably. Lilies and violets sold better than any other cut flowers.

VICTORIA, B. C.—The Fairview Esquimault Greenhouses say their sales were greater at Easter than those of last year. Thousands of outdoor flowers were sold, but only lilies were wanted in plants.

\*Mr. Nehrling's paper commenced in our issue of July 10, 1909, and was continued July 31, October 9, November 27 and January 8 and February 19, 1910.

**OBITUARY.****Mrs. Sarah E. Smith.**

It is with sadness that we chronicle the death of one of the pioneer florists of Grand Rapids, Mich., Mrs. Sarah E. Smith, mother of Henry Smith, the leading florist here, who died Saturday morning, April 2, at their home on West Bridge street. Mrs. Smith was for many years in charge of Henry Smith's flower store on Monroe street. She was a noble, pure and loving woman, always striving to please. Mrs. Smith was a leader in the Grand River Valley Horticultural Society, and, as long as she was able, gave her influence and knowledge to the advancement of fruits and flowers, until failing health obliged her to retire. Her untiring industry, forethought and business ability assisted materially in laying the foundation and building up the well known fruit farm and florist business of Henry Smith. Mrs. Smith was born in New Rochelle, N. Y., in 1834, and came to Grand Rapids with her parents, Jos. Escott and wife, in 1839. In 1860 she was married to George Smith, and moved to Englishville, where they resided on a farm until 1870. Following her husband's death, she removed to the home on West Bridge street, and in which she died. Surviving Mrs. Smith are one son, Henry Smith, and one brother, George Escott, of Charlotte, N. C. B. S.

**Henry Charles Hatcher.**

Henry Charles Hatcher, son of John C. Hatcher, of Amsterdam, died March 26 at the Ottawa hospital, Ottawa, Ill., of pneumonia, after an illness of two weeks. Mr. Hatcher had never before been seriously ill, but his condition was realized as threatening from the outset and everything that could be done by nurses and physicians was attempted in order to save his life, all without avail. He was born in Utica 39 years ago, but passed his youth in Amsterdam, being connected with the business of his father. This he followed, together with landscape gardening, at which he was an expert, after leaving this city some 15 or more years ago. He was located for a considerable time in Atlanta, Ga., and for about two years past held a responsible position at the establishment of Mrs. Fred J. King, Ottawa. Mr. Hatcher was a member of the Episcopal church and various florists' and fraternal organizations. Warm hearted, generous and genial, Henry Hatcher made friends wherever he went and his early death will bring sorrow to all who knew him and appreciated his many excellent traits of character.

**Mrs. George M. Stumpp.**

Mrs. George M. Stumpp, wife of the well-known and prominent retailer of 761 Fifth avenue, New York, died April 5, of pneumonia, after an illness of but a few days. Mrs. Stumpp was born in England over 50 years ago. She came to this country about 31 years ago and soon after was married to Mr. Stumpp. She was a woman of fine character and endearing personality and was beloved and esteemed, not only by her own family, but likewise by a large circle of friends and acquaintances. She was a member of Laurel chapter, Order of Eastern Star, of New York. She is survived by her husband, one son, Geo. E. M. Stumpp, of New York, and one daughter, Mrs. Henry Mehl, Jr., of Jersey City. The sympathy of all members of the trade goes out to the bereaved family.

"Think you, 'mid all this mighty sum  
Of things for ever speaking,  
That nothing of itself will come,  
But we must still be seeking?"

WORDSWORTH.

### Personal.

Robt. Miller and L. L. Barton, well-known eastern growers, were in Chicago this week giving finishing touches to plans for the Salt Lake City greenhouse establishment they have had under consideration for some time.

Frederic W. Taylor, of the Denver Reservoir Irrigation Co., Denver, Colo., better known in connection with the St. Louis World's Fair, was a visitor this week.

C. B. Whitnall, of Milwaukee, Wis., was elected city treasurer on the social democratic ticket April 5.

THE wilt o' the weather's the wail  
o' the west.

MANY Easter reports were sent us without name or address and, in consequence, could not appear, as in most cases it was impossible to locate the senders.

THE common pink lilac, from points in southern Illinois and northern Missouri, arrived on the Chicago market the end of last week, 26 days earlier than usual.

IF California affords any weather better than the Chicago brand of March, 1910, California will please show us. There is nothing superior to Chicago weather anywhere at any season.

### American Carnation Society.

ED. AMERICAN FLORIST:—

We have the annual report about ready to send out to our members. It will, no doubt, go out by the end of this week. We were fortunate this year in getting a very capable stenographer who turned the copy of the business sessions over to us in splendid condition. We have extra copies and shall be glad to mail these to colleges or other institutions who have libraries, who may apply for them.

A. F. J. BAUR, Sec'y.

### March Weather Extraordinary.

The month of March, 1910, in Chicago, was the warmest, driest and sunniest March since the official records began in 1871. Following the excessive heat of the first six days, a period of nearly normal temperature prevailed until the seventeenth, after which the temperature was again excessively high until the close of the month. On only one day did the temperature fall below the normal, while the freezing point was reached but seven times in the whole period. Precipitation in excess of .01 inch fell on only three days, while the average for March is 12 days. The average snowfall for March is 5-2 inches, but in 1910 snow fell on only three days, and was but a trace in each case. The wind movement was slightly below the average and but few high winds occurred. Sunshine was abundant, being 34 per cent in excess of the average, while cloudiness was correspondingly deficient. There was no day on which the sun did not shine at all, while on 10 days the percentage was 100.

### President Elliott Accepts.

President-elect Wm. H. Elliott, of the American Rose Society, writes as follows to Secretary Hammond, under date of March 28:

"Your notification of my election as president of the American Rose Society came duly to hand. I am rather surprised, under the circumstances, that I was selected for this position instead of one of the many able rose men who were present and who could have filled the position much better than I shall be able to do. However, I greatly appreciate the honor which has been tendered me and will certainly do my best for the interests of the American Rose Society. The great responsibility of this position during the coming year, with our great national exhibition to be held in Boston,

impresses me very much and I feel sure that the rose society can and will do its share towards the success of this great undertaking. Thanking the society for the honor conferred and you personally for your kind notification," etc.

### Chrysanthemum Society of America.

SPECIAL PRIZES FOR ANNUAL EXHIBITION.

The following are the special prizes offered at the Chrysanthemum Society of America's annual show to be held at Morristown, N. J., in conjunction with the Morris County Gardeners' and Florists' Society, November 23-24, 1910:

#### CLASS A.

C. S. A., special.—Silver cup for the best 10 blooms of any chrysanthemum, one variety.

#### CLASS B. (a).

Wells & Co., special.—First, gold medal; second, silver medal; third, silver gilt medal, for the best six blooms chrysanthemum Howard Gould.

#### CLASS B. (b).

Wells & Co. special.—First, gold medal; second, silver medal; third, silver gilt medal, for the best three vases of single chrysanthemums in three varieties, six sprays of each variety. Prizes offered by W. Wells & Co., Merstham, England.

#### CLASS C.

Lord & Burnham Co.'s special.—Gold medal, for the best 30 blooms chrysanthemums, in six varieties, introductions 1909-1910; open to private gardeners only. Prize offered by Lord & Burnham Co., Irvington-on-Hudson, N. Y.

#### CLASS D.

Hitchings & Co.'s annual special.—Silver cup, value \$25, for the best six vases, six varieties, five blooms in each vase, open to all. Prize offered by Hitchings & Co., New York.

#### CLASS E.

J. C. Vaughan special.—Silver cup, for the best specimen plant chrysanthemum, any variety; open to private gardeners only. Prize offered by Vaughan's Seed Store, Chicago and New York.

#### CLASS F.

Peter Henderson & Co. special.—First, \$10; second, \$5, for the best six vases of ostrich plume chrysanthemums, six varieties, three blooms to a vase. Prize offered by Peter Henderson & Co., New York.

#### CLASS G.

Chas. H. Totty special.—Silver cup, value \$50, for the best 12 blooms chrysanthemum R. F. Felton. Prize offered by C. H. Totty, Madison, N. J.

#### CLASS H.

Elmer D. Smith & Co.'s special.—\$25 for the best six blooms of chrysanthemum Rande. Prize offered by Elmer D. Smith & Co., Adrian, Mich.

#### CLASS I.

Wm. Duckham special.—First, \$10; second, \$5, for the best six blooms chrysanthemum Onunda. Prize offered by Wm. Duckham, Madison, N. J.

#### CLASS J.

Anton C. Zvolanek special.—\$10 for the best three varieties, three blooms to a stem, any chrysanthemums. Prize offered by Anton C. Zvolanek, Bound Brook, N. J.

The secretary will be pleased to add to this list any other specials from firms or individuals willing to contribute a prize. President Elmer D. Smith has appointed E. G. Hill, Richmond, Ind., chairman of the executive committee of the Chrysanthemum Society of America.

C. W. JOHNSON, Sec'y.

## Meetings Next Week.

We want immediately, for general greenhouse work in Montana, a man of good character and sobriety. Give age, experience and references in first letter.

Key 489, care American Florist.

## Help Wanted

Fairly practical man to take charge of 15,000 feet of glass in general retail establishment. A good place for a capable man; married man preferred. Address  
Mrs. Fred J. King, Ottawa, Ill.

## Wanted.

Experienced greenhouse builders and glaziers; write at once.

THE MIAMI FLORAL CO.,  
Dayton, Ohio.

## WANTED AT ONCE

A sober, industrious man for general greenhouse work.  
Wages \$14.00. Address

Key 454, care American Florist.

## WANTED.

Two young men with some experience in general greenhouse work, as assistants on large place. Good wages and chance for advancement. Address

Key 477, care American Florist

## Greenhouse Construction

BY PROF. L. R. TAFT.

It tells the whole story about how to build and heat a greenhouse, be it large or small, and that, too, in a plain, easily understood, practical way. It has 210 pages and 118 illustrations. PRICE, \$1.50

## Greenhouse Management

By the same author. Covers the subject completely. 382 pages. PRICE, \$1.50.

American Florist Co.,  
324 Dearborn St.,  
Chicago.

## The Easter Flower Market.

ED. AMERICAN FLORIST:—

The enclosed clipping from the Memphis Commercial Appeal, one of the most influential and widely read journals in the south, contains several statements which will be news to the "elect," as well as to the general public. Evidently the Longiflorum and Formosum lilies are not a factor in the lily market, as present prices are "logically" explained by the shortage of bulbs from Bermuda. Some of us now know, for the first time, how business is conducted in Chicago, and can imagine the principal wholesalers driving around in a "one-hoss" wagon, collecting hyacinths which have been "grown by the children." But best of all is the statement that there is a fortune to "be made by the cultivation of flowers," and we may soon expect plenty of accessions to the list of growers.

MAC.

"Like other luxuries of the season, Easter flowers have soared in price beyond all reach of reason. The increase may be sympathetic. There is, however, a more logical reason for the advance in the price of the Easter lily than in many other commodities on the market. Easter coming early this year, and the season being delayed in the island of Bermuda, which makes the favorite lily very scarce, the supply is limited. According to New York reports, only 30,000 bulbs were imported this season, and the average shipment is never less than 50,000 as a rule.

"But other flowers have not been delayed by the season, and as most of them are glass grown, there is no reason why the cost this year should be greater than last. The price of earth has not advanced, except in certain classes of building lots. The soil, care and original cost of bulbs and seed remains unchanged, yet the flower output this season has reached a top note in a crescendo of increasing value. Never before has the Easter floral offering cost so much. People for the first time have begun to speculate on the fortune which is to be made by the cultivation of flowers.

"Most of the flowers used in Memphis are grown about Chicago. Floral commission merchants buy the individual crop of each suburban planter. In many homes in the suburban towns about Chicago the children grow hyacinths for the market. They grow other flowers as well. From house to house the merchant drives, collecting and buying the stock of each small grower. The gathered flowers are then marketed in Chicago. The flower market of that city is the most important in the United States outside of New York. Southern violets are shipped to Chicago, only to be shipped back again to local dealers.

"The trade in flowers during late years has grown in magnitude. There are great farms in the suburbs of Chicago and along the sandy lake shore devoted exclusively to the growing of roses. In the summer they are made hardy in the open air. In the winter the plants are housed under glass and forced for blooming. The winter supply comes largely from these plants. The Easter flower market has been plentifully supplied. The scarcity of the Bermuda lily probably had a tendency to increase the general cost of flowers, and the high cost of other things added a sympathetic impetus toward higher prices."

WHOLESALE

## Coal From Plant Spores.

A writer in a recent issue of Rhodora reports that certain coals that have been investigated consist almost entirely of the microspores and megaspores of certain fern allies that flourished during the coal forming period according to the American Botanist. By careful manipulation of the coal it is possible to study the spores satisfactorily with the microscope. These spores are the next thing to pollen grains—pollen grains themselves being essentially spores—and the bituminous matter found in some coals is regarded as produced from the waxy matter contained in the spore coats.

MERIDIAN, MISS.—A 25 per cent increase in sales at similar prices to last year is Mrs. N. G. McKinney's report for Easter, and there was plenty of stock of all kinds. Lilies were most sought in flowering plants, though all sold well and carnations and lilies were the best sellers in cut flowers.

TEXARKANA, ARK.—The Stegall Floral Co. reports a 25 per cent increase in its sales at Easter over those of last year, but competition kept prices down. There were not enough cut flowers, but plenty of flowering plants, which were greatly in demand. Carnations were most looked for in cut flowers.

NEW ORLEANS, LA.—Business for Easter with Abele Bros. this year was about the same as last, but at higher prices. Large azaleas and lilies were most called for in plants, and flowers of all kinds sold out. Owing to the hot weather stock shipped here from Chicago arrived in poor condition, much of it, apparently, having been pickled.

AMBLER, PA.—The Pennsylvania School of Horticulture for Women is now ready to receive pupils. This school, which is on a 20-acre farm, offers a two-year course in horticulture to women only. As the greenhouses and other buildings are not yet built, the first pupils will get the benefit of helping with the planning of this work. Miss Jane B. Haines, of Cheltenham, Pa., is the secretary of the school.

## The Merits of

# APHINE

Will again be publicly exploited  
at a demonstration before the

Nassau County Horticultural  
Society

at Pembroke Hall, Glen Cove,  
L. I., Wednesday afternoon,  
April 13th, from three to six  
o'clock.

We are anxious to have a large  
collection of insect-infested plants  
submitted at this test, so that we  
can decisively demonstrate the  
wonderful merits of this new in-  
secticide, Aphine.

You are cordially invited.

Aphine Manufacturing Co.  
MADISON, N. J.

POUGHKEEPSIE, N. Y.—An interesting paper on violet culture, read by Peter T. DeVoy of Worrall avenue at the meeting of the Dutchess County Horticultural Society, March 29, was one of the principal features of the meeting. Mr. DeVoy has raised a new violet of a light shade, flowers of which were shown and much admired by those present. He has named it after his daughter, Marie Elsie.

### Weather Helps General Business.

In its weekly review of Chicago trade, Dun's Review, published by R. G. Dun & Co., in the issue of April 2, says: "Business generally exhibits a prompt response to the seasonable weather. Payments through the banks, deposits and loans are seen to be far above all previous records, a convincing testimony to improved activity in the leading industries and investment. Movements have become remarkably extended in heavy materials, raw supplies and factory outputs, but those of grain, live stock, and provisions show decline. Forwardings of general merchandise to the interior exceed those of a year ago. High prices still affect the markets for the principal foodstuffs, and buyers operate cautiously. Farm reports reflect gratifying progress in seeding, and the anxiety to complete spring work soon accounts for smaller crop marketings at this time."

### Chicago.

#### MARKET OVERSTOCKED.

The latter part of last week the market was glutted with all kinds of stock and the greatest difficulty was found, both in the commission houses and the grower's establishments, in cleaning up. Not only roses and carnations, but everything else was over plentiful. Among the flowers that have been arriving in quantity is the outdoor southern lilac, a flower that is usually looked forward to and—the first lots at any rate—welcomed. It is hardly welcome now, in view of the scant demand and the great quantity of other stock, and is about 26 days earlier than usual. The outdoor daffodils are coming in, apparently, in carload lots and are becoming a nuisance. There are so many of these flowers that some of the boxes are never even unpacked. Indoor bulb stock is, of course, affected in price by this cheap southern stock, yet, for the season, good tulips seem to be holding their own very well—but they must be good and fresh to stand shipping. The week also saw the first appearance of the pretty little trailing arbutus or May flower, one of the most fragrant little flowers in existence. Good yellow irises are also in and we saw a few German varieties, but the latter were not of very good quality and looked as if they had suffered considerably in

transit. Pansies continue to arrive in quantity and make a variety. Orchids, gardenias, lily of the valley, sweet peas and other flowers for street wear have taken a little fillip, probably owing to the bright weather, but violets are rapidly reaching the "down and out" stage.

On Sunday and Monday the weather kept warm and stock kept pouring in, making the wholesalers wonder when the avalanche was going to cease. It did not cease, though, as showing what only one day's cold will do, the Wednesday morning cut was not so heavy by nearly one-half as the previous day's. Roses naturally felt the change quicker than carnations, and the Beauty run was checked considerably. There is nothing, of course, in a day or two of cool weather to make any very substantial change at this time of the year, but it has been so unseasonably hot up till now, and the plants have been working so hard that in the natural course of events a shorter supply may be expected. Then, several of the large growers, urged by the forward condition of the young stock and the low prices prevailing, are already throwing out their roses, and this all has a tendency in the same direction. Candidum lilies have been arriving here in small quantities and fair quality, making a welcome change from the ubiquitous Easter lily and calla. Taken as a whole, the week must be described as a poor one. There were good days for shipping, notably Friday and Monday, but there were also very poor ones and these, unfortunately, were in the majority.

#### NOTES.

J. F. Felke, aged 47, died at the Alexian Brothers' hospital March 31 at the age of 47, from dropsy and Bright's disease. Mr. Felke used to be in partnership with Nic Miller, now of the J. B. Deamud Co., on Mohawk street, and later at Wilmette. He bought out the old firm of Felke & Wagner and later sold the interest in it to his father and Mr. Miller. He was Nic's brother-in-law, also brother-in-law to Anton Then. The funeral was held on Saturday, April 2.

Vaughan's Seed Store forces are on the jump from early morning till late at night and during the rush hours of the day. The space in both stores, 84 Randolph street and 809 W. Randolph street, is wholly inadequate to accommodate the throngs of customers. In the evening when the stores are closed to all but the night force, sentinels have to guard the doors to keep customers out while the workers enter or leave the buildings.

John Mangel has been very busy with wedding decorations and a "pink and white" wedding on the north side gave him an opportunity to put in some of his best work. The whole scheme was pink and white except for the green foliage and consisted of white Killarney, and Killarney roses, a few lilies and some banks of Azalea Vervaneana. The roses were used on the tables and the same color scheme carried out throughout.

Expressman Senator Tom Platt was blamed for the following: "Anticipating your desire to transport to sundry propinquities and various habitats

# Bassett & Washburn

Store and Office: 76 Wabash Ave.,

CHICAGO

Greenhouses: HINSDALE, ILL.

certain commodities appertaining to the genus flora contingent to our line of locomotion, and assuring you that, being unable to conform with sundry legal usages concerning delivery (and putting aside all unnecessary and confusing verbiage) we agree without any equivocation or mental reservation whatsoever to reimburse you in the event of the unfulfillment of the contract we are about to enter upon. We respectfully solicit your valued patronage, as our quadruped attached to the vehicle is at your portal and admits of no lost motion."

Peter Reinberg's American Beauty roses have been arriving in great quantities during the week, and the quality is excellent. His other roses too are fine, and so are the carnations, sweet peas and other stocks. Out-of-town trade has kept up very well, and considering the large amount of stock on hand, each day shows a very fair clean up. Mr. Reinberg was re-elected as alderman of the Twenty-sixth ward by an overwhelming majority.

An appeal has been made to the city council for a municipal greenhouse and nursery on the city's Riverside property known as Gage farm. We note that City Forester Frost has been advising the planting of smaller, younger trees in the city streets in the place of those of larger caliber, and this looks like good advice.

The J. B. Deamud Co. was the first house to handle the trailing arbutus this year, considerably earlier than usual. J. B. has also secured a fine lot of forced Lilium candidum, quite an unusual feature in the market. Discriminating buyers can always find something here in the way of novelties.

Vaughan & Sperry are working hard to clean up the heavy consignments

of good stock and succeeding in doing it. A very large amount of business is done here now, but not without some good hustling and careful manipulation. Carnations of excellent quality, sweet peas and roses are leaders.

Louis Wittbold, of the Geo. Wittbold Co., reports another extremely busy month, the best March on record. Outside work, such as grading and planting, as well as the transient trade at the retail stores have been greatly helped by the fine weather.

Winterson's Seed Store has almost disposed of its consignment of box specimens and is now making preparations for a large shipment of bay trees, mostly standards, in assorted sizes. The entire force is busy day and night and Sundays.

Kyle & Foerster handled a very heavy out-of-town trade at the week end, good carnations being a considerable part of the consignments. Extra good lilies are among the best showings here this week.

Charlie Drissler of the Wietor Bros. force joined the benedicts April 5. On this date he married Miss Mary Solt at St. Michael's church at 9 a. m. Good luck, Charlie.

E. H. Hunt reports a falling off in business the end of last week, but Monday of the present week showed an excellent demand, causing a good clean up.

L. Wasserman, Muskegon, Mich., was in town buying supplies this week and reports the best Easter trade he ever had.

The Foley Mfg. Co. has another experiment station greenhouse plant under construction at Madison, Wis.

The A. L. Randall Co. reports the Evergreen flower fertilizer an excellent seller.

Wire Us for Prices on Large Quantities

# VAUGHAN & SPERRY

Long Distance Phone,  
Central 2571.

52-54 Wabash Ave., CHICAGO

The Beauty crop at Bassett & Washburn's must be large, judging by the amount of flowers arriving daily, and the quality is excellent. Richmond is also arriving in good shape, as are the teas. A fair shipping and city trade is reported.

Zech & Mann are showing excellent stock and report their out-of-town trade good, many of the new customers who came to them at Easter staying with them since. Good stock and careful personal supervision of all orders always make for success.

John C. Behrer, democratic candidate for alderman in the Seventh ward, failed of election last Tuesday, but made a very considerable gain for his party in a republican stronghold.

The funeral of Robt. Wilson Patterson, editor of the Tribune, April 4, created a heavy demand for funeral work, of which The Ernst Wienhoeber Floral Co. had a large share.

E. F. Winterson finds all his rest and recreation right in the cut flower business and was still hard at it at 11 p. m. last Sunday night.

S. Muir says that trade at his two stores has been a little quieter since Easter, though very satisfactory as a whole.

The Bohannon Floral Co. has had several good decorations during the week and reports trade generally good.

Visitors: Fred Holton, of Holton & Hunkel, Milwaukee, Wis.; John Evans, Richmond, Ind.; Albert C. Rott, Joliet; P. Peterson, of the J. D. Thompson Carnation Co., Joliet; L. Wasserman, Muskegon, Mich.; C. H. Woolsey, Rockford; C. Peterson, of Peterson & Son, Escanaba, Mich.; G. E. Serviss, Batavia; M. S. Crozer, Cedar Rapids, Ia.

### BOWLING.

There will be a double-header Thursday night at Bensinger's alleys, six games being scheduled, and a start to be made at 7 p. m. Next week will be the same and an extra game will have to be rolled the succeeding week at some other alleys, probably Flenner's. This is in order to catch up on the schedule, games having been missed at the time of the flower show, the election of officers at the Florists' Club, and the week previous to Easter. The Carnations and Violets are now tied, so an interesting series is looked forward to. Wolf still leads in the race for the Deamud cup, though Yarnall gained 28 pins last week and is now only five behind.

### St. Louis.

#### OUTDOOR STOCK POUNDS PRICES.

The weather has been somewhat cooler with some rain. Everything is far advanced. Lilac from the country has been coming all week and this outdoor stock has influenced the market considerably. Narcissus poeticus from the south is coming to hand in large quantities. Sweet peas have been abundant, in fact, everything seems to be in crop. Easter was early and the plant men are looking out for early disposal of their bedding stock. Roses are on and prices have a downward tendency.

#### NOTES.

We regret to announce the death of Annie Bova, sister of Dominic Bova, of the Red Bud Floral Co., aged eight years. She was an exceptionally beautiful child.

Henry Emmons, of Belleville, was in with carnations Saturday and returned busy with funeral work. He reports fine Easter trade.

Miss Edith E. Ostertag, eldest daughter of Henry Ostertag, of Ostertag Bros., was married to John W. Doedii, March 30.

A. W. Murray, of Union boulevard, reports a splendid Easter trade. This was the first Easter in his new store.

Martin Moran reports spring trade as far advanced, owing to the very warm weather we are now having.

C. Young & Sons Co.'s display of tulips in their show windows on Olive street is very attractive.

Kalisch Bros. report a splendid Easter trade. Their stock was almost entirely cleaned out.

J. F. Wilcox, of Council Bluffs, Ia., ships several boxes of roses to this market daily.

E. W. Guy, Belleville, Ill., has been busy repairing the damage done by the recent fire.

Andy Hoffmann was on the market Sunday in the interests of George Waldbart.

The Eggeling Floral Co. is cutting some fine carnations at the Kinloch plant.

The Horticultural Society expects to have a fall show on a very grand scale.

Frank Bucksart has been working lately in the local forestry department.

H. Skelcher & Sons, Webster Grove, are sending in some nice cut pansies.

Miss May Burns is now in the employ of Ostertag Bros.

The St. Louis Seed Co. reports trade as good.

W. F.

### Urbana-Champaign, Ill.

The weather for Easter business was ideal and all report large sales. Gus Johnson reports business as far surpassing that of any previous Easter. Decorative work and cut flower deliveries kept his force at work until late Saturday, and work was resumed Sunday morning. The demand for carnations and lilies was far greater than the supply.

A crop of lettuce is being planted in one of the new experiment station greenhouses at the university. Chemical fertilizers in varying proportions are being used. Later in the season this house will be planted to roses. The carnations are blooming freely, the flowers being of good size and excellent quality.

The Experiment Station Department of Horticulture will carry on extensive spraying experiments the coming season. Lime and sulphur as a summer spray, will be given a thorough trial, and the Bordeaux mixture tests, which have been running for several years, will also be continued.

Large orders for carnations have been placed for election day, Tuesday April 5. From the local papers we note that several organizations are planning, to present every legal voter with a carnation.

Chas. Brash, for 10 years employed as grower in the University greenhouses, has resigned and accepted a position with Morgan, Adams & Co., at Paxton.

Thos. Franks & Son report a large increase over last year's business, both in cut flower sales and decorative work.

H. B. Dorner, secretary of the S. A. F. spent Easter Sunday with his parents at La Fayette, Ind.

ARNO H. NEHRING.

BELLINGHAM, WASH.—The Kersey Floral Co. reports a falling off in business at Easter of 20 per cent over that of last year at similar prices. There was not sufficient plants, but plenty of cut flowers, lilies, hyacinths and cyclamens being the best sellers.

EMPORIA, KANS.—A new greenhouse has just been completed at the corner of West street and Twelfth avenue, owned by the Emporia Floral Co. The greenhouse is 54x100 feet. It has 80,000 feet of glass exposure, with a concrete foundation reinforced with iron.

POMONA, CALIF.—O. Roessner says his sales at Easter were about the same as those of last year, with prices a little better. There was plenty of plants, but cut flowers were a little scarce and the best call was for carnations.

QUIET WITH PLENTY OF STOCK.

The week following Easter is generally apt to be quiet. This year was no exception to the rule. There has been plenty of stock of all kinds coming in since Easter and the trade has not been quite equal to the task of keeping the markets cleaned up. There is a little shortage of good cut lilies. Aside from this there is plenty of everything. Roses are coming in freely. Prices are lower and excellent values are offered. Beauties are down in price, quality fine. Violets are falling off considerably and the doubles are best. Some splendid carnations are coming in and seem to find a ready market. Bulbous stock is coming in heavily, but selling well. Sweet peas are coming in freely. The newer varieties do not sell as well as the older ones. Gardenias are coming in extremely heavy and prices are down. Orchids are still short. Valley is plentiful and selling poorly. Pansies, primroses, anemones, ixias, etc., are coming in plentifully and there is a most attractive variety for the buyers. Asparagus Sprengeri, A. plumosus and adiantum are in good demand and large quantities are disposed of daily. The plant trade has naturally fallen off since Easter, but there is still a lively business in small and desirable flowering stock.

NOTES.

The regular auction sales of plants by the N. F. McCarthy Co. begin April 5 and are held on every Tuesday and Friday. A fine lot of hardy roses, flowering shrubs and fancy evergreens will be offered at the early sales. These sales have been held for several seasons and are a fine medium for many growers to dispose of their surplus, as well as for consumers to pick up whatever they may require in the line of stock offered.

P. Carbone has closed his original Boylston street store and transferred all the stock to the larger and newer location. It is interesting to note the growth of this firm during the last few years. From rather a small basement store it has reached out until now one of the largest stores on the street is

A QUIET TIME.

The people who were so eager for plants and flowers in Easter week appear to have been satiated and for the time being have retired; at least so it seemed last week, as business with the exception of a few weddings, was very light and flowers were piled up in the commission houses to an alarming extent. American Beauty roses have come in with a rush and from having to canvas several houses to get a dozen, we can now get them by the hundred or even thousand for that matter at buyers' prices. Much of the stock is very fine. Almost everything else is very abundant, carnations particularly so. Southern daffodils are seen in quantity, many of them carrying badly on account of the warm weather. Lupins and snapdragon are also fine and plentiful and make show vases for window decoration. Sweet peas are selling as well as anything and are of excellent quality. There are great stocks of Easter lilies. All the growers, it would appear, had a lot that did not quite make Easter and the continued warm weather has brought them all in at once, so that prices rule very low.

NOTES.

Jacob Becker sold his Forty-ninth and Chestnut street property last week for a price close to \$65,000. About 15 years ago he purchased the ground for \$20,000 and has used the same for his business, erecting greenhouses and frames, etc., ever since. A real estate operator is the buyer and will improve it with the erection of handsome dwellings in the near future. Mr. Becker is to be congratulated on his foresight and the excellent return from his investment.

The annual opening of the city legislature, when newly elected members are seated, occurred last Monday, and there was the usual display of flowers and flowering plants that made the chambers look like a horticultural exhibition. All the trade benefited, wagons from all parts of the city being

shown in the excellent paper of Henry I. Faust, of Merion, his subject being "All About the Easter Lily." K.

Boston Notes.

A. N. Pierson & Co., of Cromwell, Conn., is sending out some fine cattleyas and gardenias. There are so few good cattleyas to be had that they are welcomed by the store men who are lucky enough to secure them.

Sim's sweet peas keep pouring into the market. There seems to be no limit to the quantity or variety of colors. This has been the most successful season Mr. Sim has ever had.

The favorable weather of the last week has stimulated outside work, and stores in town, which specialize in gardening, etc., report the orders as coming in in good shape.

H. M. Robinson & Co. report business as being fair since Easter, the local trade being a little off, while the out-of-town business held up well.

John Jansky, the newest of our wholesale dealers, had a most successful Easter and is making plans already for Decoration day.

This has been ideal weather for the street men and the market has been helped wonderfully by the outlet afforded by them. R.

LORAIN, O.—There was a good demand for Easter flowers and plants with prices about the same as last year.

SPRINGFIELD, O.—Arrangements are being made for a big fall flower show by the Florists' Club, who have placed Roger Murphy, C. L. Reese, C. P. Bethard, John M. Good and Geo. D. Leedle in charge. Members of the club have pledged their support and the Y. W. C. A. has promised to co-operate, so a successful show is expected. A premium list is in preparation, and local amateurs and out-of-town florists are invited to exhibit.

lined up around the city hall just prior to the opening.

The April meeting of the Florists' Club held last Tuesday evening was well attended and much interest was

Frank H. Traendly.

Walter F. Sheridan.

Chas. Schenck.

DENIZENS OF THE HISTORIC RIALTO WHO WILL MOVE SHORTLY.

## New York.

## A GLUTTED MARKET.

The weather of the past week had a telling effect on the business. It was very fine, several days being unseasonably warm, and flowers bloomed by the millions. In the wholesale district there was an unprecedented glut and demoralization of prices. The business of the week was largely an effort to unload stock for whatever was offered and in some cases there were no offers. When Killarney roses are bunched, regardless of grades, the specials going with the tailings, and sold for \$15 per 1,000, we call that cheap. This is but one of the many instances of slaughter, and has been paralleled in nearly every line of stock. The retail stores have been buying very light and it may as well be acknowledged that nothing but the industry of the street men prevented conditions from being intolerable. However, there is said to be a silver lining to every cloud. Present conditions cannot last long, at least if they do, all precedents will be broken. In the meantime, everybody in the wholesale district is showing remarkable self-control, and trying to look pleasant.

## NOTES.

A movement which may eventually work great changes in the wholesale district has been started by Traendly and Schenck and Walter F. Sheridan. As is generally known, the wholesale business has heretofore been largely concentrated in Twenty-eighth street, between Broadway and Sixth avenue. On or about May 1 the above mentioned firms will remove to the ground floor of a new and large building, 131-133 West Twenty-eighth street, and west of the avenue. They will there have much more commodious and convenient quarters than at their present locations and there can be no doubt that trade will follow them. Aside from any personal considerations, it can be said that Traendly, Schenck and Sheridan have established reputations for handling good stock and for fair dealing. They have been active, not only in their own business, but along all lines that tend toward the advancement of horticulture. They are yet comparatively young men and we trust that by these changes their field of prosperity and usefulness may be broadened. When

these firms go west of the avenue there will be quite a colony on that side. J. K. Allen, Guenther Bros. and the Kervan Co. are already there and there are rumors that others will soon locate in so congenial a neighborhood.

The Aphine Mfg. Co. announces another demonstration of its preparation under the auspices of the Nassau County Horticultural Society at its next meeting at Pembroke hall, Glen Cove, Long Island, April 13, between three and six p. m. Growers are requested to submit insect-infested plants for experiment.

Dull as the cut flower business is, there is great activity in plants. The auction houses seem to be doing a good business and the wagons of the plant vendors are daily features on the streets. Impromptu plant stores now seem to spring up like Jonah's gourd, in a night.

It is stated that the home of Louis Schmutz, of 131 Clarkson street, Brooklyn, was entered by a robber on the night of March 28, and \$1,700 in cash taken.

Chas. Millang, who has been confined to his home by illness for the past two weeks, is reported to be rapidly improving.

ATLANTIC CITY, N. J.—The city council has voted an expenditure of \$3,000 to establish flower beds at the ends of certain avenues as a part of the "city beautiful" plan.

TRENTON, N. J.—The five-story Ribsam building, the lower floor of which was occupied by Martin Ribsam, was completely gutted by fire March 30. The loss is estimated at \$50,000.

ELMIRA, N. Y.—The Moore, Hentz and Nash cup won by the United States Cut Flower Co. at the New York flower show recently, is now on exhibition in the window of a local jeweler.

SCRANTON, PA.—Excavation for the foundations of the Cleland greenhouse (presented to the city by John Cleland) at Nay Aug park commenced March 28. It is intended to have it completed by July 1.

BROOKLYN, N. Y.—Joseph Proval did not sail for Europe March 30, as he intended. When he went to bed Tuesday night he had nearly \$1,000 in his pockets, but during his sleep a burglar, whom the police think knew of the money, broke in and made a "clean getaway."

Providence, R. I.

Business was larger this Easter than that of last year. The weather was splendid, and, barring some dust and a sometimes brisk wind, there was nothing to it but praise. Carnations and roses went slow, same as last year's experience. Violets sold out completely all over town, and orders kept coming in up to closing time on Sunday. Easter lilies went fine at 25 cents per bloom and bud. Bulb stock had a large call, especially in fine tulips and select daffodils in pans. Azaleas were in great condition and were eagerly sought by those who had the price. The small customer does not have much use for azaleas so far as purchasing is concerned. Everyone in the trade had the appearance of a clean-up. Prices on everything were firm, and there was plenty of all stock excepting violets, which had a phenomenal sale. The latter flower was the only one which brought good prices, comparatively speaking. The wholesale cost was low, but the retailer had to get a good figure on account of other cut flowers being slow sale. It was the most satisfactory Easter in recent years from a weather, price, delivery and stock point of view.

M. M.

Baltimore.

TRADE DULL.

Business has not been very brisk since the plethora of Easter, as was naturally to be expected. A great deal of stock, of all varieties, which notwithstanding the warm weather, failed to come out in time for that holiday, made its appearance a few days later, leading to a congestion of the market, notwithstanding a good many weddings and the social festivities which, as usual, followed on the heels of the great spring festival.

The excessively high temperatures have abated, but the mercury marks more than normal, and the fruit trees and shrubbery is pushing rapidly into bloom. On every side apprehensions are expressed of the loss which is likely to be involved if a severe frost occurs later. The whole of March was more like June in this latitude, the thermometer reaching 83°. If the old saying that "a peck of March dust is worth a king's ransom" is true there ought to be a world of fertility in the dust which now lies on

the roads or blows over the fields. Practically no rain has fallen for four weeks, and in some localities the soil is so hard it is impossible to plow. Wells and springs continue very low, the rain falling in the winter running off without penetrating the lower strata. There seems to be some general law of equilibrium in these things, but it is hard to say just when the cycles begin or end, and a good deal of uneasiness is felt by farmers and gardeners lest we have another season of drought like that of last summer.

Richard Vincent, Jr., with his wife and daughter, are about starting on a trip to Great Britain and the European continent. His health has not

EASTER A RECORD BREAKER.

Easter business was the best ever experienced in this vicinity. The weather conditions were ideal, with hardly any frost, which greatly facilitated delivery. Flowers of all kinds, with the exception of American Beauty and Richmond roses, were plentiful, and with a great quantity of flowering plants and bulbous stock, the store men did not suffer for lack of variety. Lilies were more than plentiful; in fact, they seem to have been greatly overdone, for many were sold for \$5 per 100 and lower.

The retailers all took advantage of the splendid stock offered and some very fine windows were seen, the idea being more to show the general stock handled than to make a specialty of any one thing. Dunlop's showed a very fine window of lilacs and rhododendrons, nicely decorated, and had some very choice baskets of flowers. J. S. Simmons had lilacs, azaleas and Adiantum Farleyense. Tidy & Son had baskets and miscellaneous stock; Dille-muth had lilacs, lilies and orchids. The heaviest demand was experienced in violets and valley, high price roses and carnations seeming to lag somewhat. Frank Dufford had a nice lot of lilacs and rambler roses. Trethewey Model Farm had a nice cut of bulbous stock and Beauty of Nice stocks. Grobba & Wandrey had a fine lot of cattleyas and bulbous stock, and their made-up arrangements were much in demand. Albert Houle had some very long stem sweet peas, the finest in this locality for the season.

The majority of the violets came from Wm. Fendley, of Brampton. These have been planted in the solid ground and houses built over them; the advantage of this method of growing violets was here demonstrated, for, although the majority of growers are now through cutting, Mr. Fendley still has them in quantities and the strength of stem and size of bloom are equal to those in mid-season.

Visitors: Wm. Gammage, London;  
E. Dale, Brampton.

Lockport, N. Y.

The four days preceding Easter were warm and bright, thereby bringing out the people and increasing trade. The retailers who rented stores on Main street during Easter week did the largest business in the history of the trade. The wholesale carnation growers of this county, whose weekly output is about 27,000 flowers, were dissatisfied last year with their returns from Buffalo. This year they split their shipments and sent most of their crop to other cities, with the most gratifying financial results.

## NOTES.

Fred Lewis will increase his greenhouses. He has had the material on the ground and intended to erect last fall, but, on account of other work, was unable to carry out his plans.

D. T. McCarthy & Sons will build a propagating house as an addition to their large plant.

White Bros. contemplate building a greenhouse, 40x175 feet.

NIAGARA.

Portland, Me.

All report a good Easter trade, a few increasing their sales over last year. The supply of flowers and plants were equal to the demand.

E. J. Hammond Co. made a fine display in its new store, showing good stock not seen in other stores. They are to be congratulated on securing such fine quarters for their business.

A.

533 MARSHALL AVE.

SAGINAW, MICH.—Prices and trade with the Wm. Roethke Floral Co. were about the same at Easter this year as last, with plenty of stock of all kinds. Plants, with the exception of bulb stock, all sold well and carnations were the best sellers in cut flowers. The fine weather made it easy to handle plants, but prices were cut by some dealers.

MONTREAL, QUE.—P. McKenna & Son say their sales at Easter showed an increase over those of last year at lower prices. There was plenty of everything to be had, but the quality was not as good as usual. Rambler roses, lilies, rhododendrons and lilacs sold better than spireas and primulas. In cut flowers, Beauties, valley, violets and orchids had the call over bulb stock and sweet peas. Many of the best society people were in New York for Easter or sales would have shown a bigger increase.

It seems as though quite a number of lily growers missed Easter by the number of lilies now seen on the market. They came in with an unexpected rush at Easter and have been coming some ever since. The worst part of it is that no price, no matter how low, tempts a buyer. Roses and carnations have just held their own, with prices about as low as it is possible to quote. Beauties, valley and red roses are the only things that move lively. Violets are on their last legs and their end is near; the nice spring weather causes the people to ask for sweet peas instead. Indoor tulips and daffodils are almost a thing of the past. The southern daffodils are here in quantity but give little satisfaction. Spanish iris is a welcome addition which the exclusive stores appreciate. The green market which had been short all winter is now long and then some. Wild smilax is not dependable any more.

NOTES.

The Beckett Co., of Coraopolis, who make a specialty of novelties, is consigning the McCallum Co. a nice line of odd color varieties of tulips and Spanish iris.

E. Harney, formerly with Faulk & Furnier, is now on the decorative staff of Randolph & McClements.

P. J. Demas states that if he can find time he expects to take a vacation to Greece this summer.

Geo. L. Huscroft, Steubenville, O., is on a northern trip touching Buffalo and Albany, N. Y.

John Harris was missed around the wholesale houses for a few days on account of sickness.

The Pittsburg Cut Flower Co. is supplying a lively demand for yellow daisies.

Lilies and carnations are headliners at the Pittsburg Florists' Exchange.

Mrs. J. Elicker, Homestead, has moved to her new location.

## The Seed Trade.

### American Seed Trade Association.

J. C. Robinson, Waterloo, Neb., Pres.; M. H. Duryea, New York, First Vice-Pres.; F. W. Bolgiano, Washington, D.C., Second Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas.; Leonard H. Vaughan, Chicago, Asst. Sec'y. Twenty-eighth annual convention, at Atlantic City, N. J. June 21, 1910.

ERNST BENARY, of Erfurt, has issued a fine new colored plate of glxoinias.

CHICAGO.—Contract prices on the board of trade April 6 for grass seed were noted as follows: Timothy, \$4.60 nominal. White clover, from 20 cents to 25 cents.—Visitor: H. Frank Darrow, New York.

EVANSVILLE, IND.—Local seedsmen report that the sales were larger on Holy Thursday this season than that of any in the past 25 years. The fine weather has induced many to plant early this year.

Two days' continuous rain has broken the extended drought in the French bulb growing districts and brightens the prospects very much, but notwithstanding this, the price of white Romans is expected to be high.

VENTURA, CALIF.—Advices of March 29 show this section has had an inch and a half of rain, which was very much needed for getting the ground into proper condition for planting beans. Growers now claim to have plenty of moisture to mature the crop which will be planted about May 1, and everything looks favorable for a good yield of beans here this season.

NEW YORK.—A new corporation, under the name of "Buds," will be a factor in the seed trade of this city. Carl Gloeckner is president and Wm. H. Siebrecht, Jr., secretary. This concern will open a store at 76 Barclay street on April 11. Carl Gloeckner has been with J. M. Thorburn & Co. for 17 years and knows the seed business thoroughly. Wm. H. Siebrecht, Jr., is a son of Wm. H. Siebrecht, the well-known specialist in lily of the valley and bulbous stock, of Astoria, L. I. The junior, in addition to being a trained horticulturist, is a good lawyer. It is the purpose of this firm to deal in the best stocks of seeds, bulbs and plants. Mr. Gloeckner will be manager.

CORN has advanced in sympathy with wheat and on the theory that receipts will become light because of fine weather for farm work and reported dissatisfaction in the country over prices being paid at stations.

### The Seed Business to Date.

Holmes Seed Co., Harrisburg, Pa.—We are very glad to state that our seed business for the spring up to the present moment has increased in every department, retail, wholesale and mail—the increase has been phenomenal, and not only that, but is continuing to increase right along during the present month. In fact, our mail business has increased 40 per cent over last year while our counter trade has increased about 25 per cent and wholesale has increased probably 22 per cent. It has been a remarkable season so far, and if good weather continues and we have a little rain we no doubt will have good April weather running into May. The ground about this section of the country is very dry and prevents plowing; it has just started to rain in a moderate manner, and if this continues throughout the day and night it will put the ground in splendid shape for the farmer and gardener.

Iowa Seed Co., Des Moines, Ia.—"The mail order, local and wholesale trade have all been greater each month this year, than in 1909, and the increase seems to be along all lines of vegetable seeds, flower seeds, farm seeds, plants, etc. The only "fall down" which there has been is on seed potatoes, there being a decided slump in that part of the trade, owing probably to the low price of eating potatoes on the market. Have especially been pushed in the farm seed department, and it was absolutely impossible to fill orders promptly, our facilities not being equal to it, but we are rapidly catching up now. March was certainly a 'hummer.' Have never experienced such a month in the past 30 years, but am inclined to look for a decided falling off in April and May."

Wood, Stubbs & Co., Louisville, Ky.—"Our January, February and March business have been ahead of last year, especially March has considerably increased. The weather, however, is extremely dry and hot and unseasonable, and we are afraid the business will be curtailed unless we have rain some time in the very near future. Conditions are very disappointing in some localities, and people are complaining that clover is dying, and lawn grass

and other small seeds are suffering considerably."

W. Atlee Burpee & Co., Philadelphia, Pa.—March has indeed been an extraordinary month in the seed trade. Our cash mail business has increased more than 15 per cent over March, 1909, which was itself a record-breaker. The most "novel experience" we have had in handling this business has been the unfortunate falling four days behind in the filling of our orders.

J. Steckler Seed Co., Ltd., New Orleans, La.—"Our business compares some better than that of last year. The season has been extremely fine for planting, and taking it as a whole, very few of the truckers, farmers or planters here in the south had any cause to plant more than once, as the first sowing sufficed for the crops planting."

Schisler-Corneli Seed Co., St. Louis, Mo.—We are glad to say that we experienced a very large increase over March, 1909, in both "garden and field seed," and from present indications the outlook for the balance of the spring season is very encouraging.

Vaughan's Seed Store, Chicago and New York.—"We have had a record-breaking March business at both places."

J. M. Thorburn, New York.—"The past month certainly has been a good one in the seed trade."

A. C. Kendel, Cleveland, O.—We want to join in the chorus "We are rushed to death."

### Free Seeds in Hoboken.

Would'st garden, Maud?  
Would'st farm, Harold?

If would'st, hie at once to the offices of Congressmen James A. Hamill and Eugene F. Kinkead. Each congressman has a room full of seeds that the United States Agricultural Department, at Washington, has sent them in the hope of seeing Hudson County blossom like unto the rose.

There is a great variety of seeds in the offices of the congressmen, 10 kinds of flower seed, each package of seeds bearing a name that would bring joy to the heart of a Greek professor. If you cannot farm get some and let the children learn to spell the names on the packages. It's as good as a college education.

The seeds for farming are named so that the lay mind can understand, for while it doesn't matter much what kind of a flower grows where seeds are planted, a man who plants corn expects a harvest of corn. Consequently, corn, in the packages of vegetable seed, is known as corn.

One thing must be remembered by those receiving the seeds. Under no circumstances must the seeds be planted until after they have been taken from the little envelopes in which they are packed.—Hoboken (N. J.) Observer.

### Imports.

During the week ending April 2 imports were received at New York as follows:

H. Frank Darrow, 1 case plants, 12 cases trees and shrubs.

Wm. Elliott & Son, 24 cases plants.

P. Ouwkerk, 125 packages trees.

McHutchison & Co., 53 cases trees and shrubs, 11 cases plants.

Julius Roehrs Co., 22 packages trees.

F. B. Vandegrift & Co., 139 cases plants.

Vaughan's Seed Store, 1 barrel bulbs, 2 bags seed.

Wadley & Smythe, 60 packages trees and shrubs.

O. V. Zangen, 1 case trees and shrubs.

### Notes on Watering.

We have just finished cutting a bed  
of lettuce in a new house, which prob-  
ably was the best we ever had, and  
which could hardly be improved upon.  
The bed contained 6,000 plants, was  
planted 6x8 inches and the crop was  
absolutely uniform, with not an aphid  
or blemish of any kind. The weight  
of crop was a marvel, each head com-  
ing close to the pound mark. The soil  
used was a heavy clay loam, which  
never had been manured. We added  
old hotbed manure and chemicals as  
often explained in these notes, but the  
most important part of the manage-  
ment was the watering. When the bed  
was ready it was dust dry, so we had  
one man spade the ground up deeply  
while another turned a heavy stream  
of water into the ditch, being careful  
not to wet the top soil. Thus treated,  
the top could be worked down and  
the bed planted. Each plant was wat-  
ered individually once after planting,  
which was all the water they ever got.  
When such results can be obtained, we  
may as well ask if it is worth while  
to consider sub-irrigation or overhead  
mechanical watering. We have em-  
phasized this point often—see to it  
that there is ample bottom moisture.

MARKETMAN.

### Irondequoit, N. Y.

Dell Titus is one of the large grow-  
ers in the township, and his place on  
the Titus road has been well known  
for a great many years for the skillful  
growing of vegetables. There are 12  
even span greenhouses 32x220 feet and  
all of them, excepting two, run east  
and west, the others run north and  
south. There are two narrow houses  
about the same length and about 20  
feet wide. Cucumbers, tomatoes, let-  
tuce, radishes, parsley, beetroot, and  
cress are all grown under glass. I  
understood from Charles Holtz, the  
foreman, who kindly showed me over  
the establishment the other day, that  
beetroots in the meantime are some-  
what in the experiment stage in the  
greenhouses. Two of the large houses  
were filled with Long Green cucum-  
bers; six rows running the entire  
length of the houses. These houses  
were planted the first week in Feb-  
ruary and they commenced cutting for  
market March 25. The strong vines  
and immense deep green leaves,  
showed evidence of vigor and excel-  
lent culture. Other houses were  
planted to cucumbers, and some were  
planted to tomatoes. The earliest to-  
matoes were about one foot high. Mr.  
Holtz said they were Earliana and

50c. oz. \$5.00.  
Also Beauty of Nice  
strains.

H. E. FISKE SEED CO.,  
Boston, Mass.

that is the most important one for  
Mr. Titus' trade, but they also grew  
Bonnie Best and Early Freedom.  
Lettuce is grown in enormous quan-  
tities and the loose-leaved variety,  
Early Keene, is the only one grown.  
A considerable area in the houses is  
devoted to the growing of parsley.  
The whole system is heated by hot  
water boilers, as Mr. Holtz said it  
was much easier to get men to care-  
fully manage a hot water system than  
it was steam.

About 23 acres are devoted to out-  
door vegetable growing in the summer  
season, and lettuce, onions, cauliflower,  
beetroots, cabbage, sweet corn, and  
celery are some of the vegetables  
grown. Mr. Titus does not grow as  
much celery as some of his neighbors,  
and Golden Heart and Self-blanching  
are the kinds grown. Mr. Titus has  
lately adopted a system of watering  
or irrigating his establishment that  
has attracted considerable attention in  
horticultural circles. A dam or pond  
of perhaps about one acre in area has  
been constructed on the place, the  
deepest part of which is said to be  
10 feet. A large pump, driven by a  
gasoline engine, forces the water into  
a 6-inch main, which is laid through  
the grounds and conducted past the  
ends of the greenhouses. On each side  
of each large greenhouse and about  
four feet from the side and three feet  
above the ground, galvanized iron  
pipes run the entire length of the  
houses. They start from the 6-inch  
main in two inches diameter and run  
for some distance; reduced part of  
the way to one and a half inches, and  
ending with one inch. There is a  
sprinkling bib perforation in the pipes  
every four feet. When it is in opera-  
tion a fine misty spray is diffused  
equally over the entire area of the  
houses. I understood there was suffi-  
cient pressure to water three houses  
simultaneously. The system is partly  
in operation on the outside vegetable  
grounds, but Mr. Titus is now install-  
ing it over his whole establishment.  
The pipes on the outside are 60 feet  
apart, and supported on iron posts,  
eight feet above ground. The gal-  
vanized pipes are proportionately re-  
duced throughout their extent, as be-  
fore explained in the greenhouses, and  
a fine misty spray is thrown 139 feet  
each way, and the proper water sup-

**Vaughan's**  
**Lilium Harrisii.**

**1911 Both Plants and Bulbs Carefully Selected.**

While we do not claim that our Harrisii are absolutely free from disease, or that every bulb will produce a perfect plant, we do claim that our growers' efforts in the way of spraying and roguing are producing results, our stock now being freer from disease than ever before and of genuine Harrisii type, in fact, the best general crop grown on the island of Bermuda.

**Vaughan's Seed Store**  
CHICAGO. NEW YORK.

#### Prices of Indoor Fruits and Vegetables.

New York, April 2.—Mushrooms, 35 cents to 45 cents per pound; cucumbers, \$1 to \$1.50 per dozen; lettuce, 90 cents per dozen heads; tomatoes, 27 cents per pound; radishes, 3 cents per bunch; mint, 75 cents per dozen bunches; grapes, Gros Colman, 80 cents per pound; peaches, \$3 per dozen. Beet tops, \$1 per bushel.

Chicago, April 6.—Mushrooms, 25 cents to 40 cents per pound; cucumbers, \$1.25 to \$1.50 per dozen; leaf lettuce, 30 cents per box; head lettuce, Florida, \$3.50 per hamper, Louisiana, \$5 and \$7 per barrel; tomatoes, 20 cents per pound; radishes, 50 cents per dozen; grapes, Gros Colman, 75 cents per pound; rhubarb, 60 cents.

#### Hop Shoots as A Vegetable.

In the spring when the hop plant begins to throw up shoots, it is customary in this country (England) to thin out and throw away the shoots, leaving only two or three to each plant. In some continental countries, however, these hop shoots are used as a vegetable, being gathered when from four to five inches long, and boiled and eaten like asparagus. They are most largely employed in this way in Belgium, where, according to information furnished by the ministry of agriculture, the shoots are gathered from about 2,500 acres of hops. The average production is about 70 pounds per acre. They are sold fresh, and are also supplied to preserving factories. They are among the earliest spring vegetables, and appear on the

bill of fare of all the large restaurants in Belgium from the beginning of March.—Gardeners' Magazine.

#### One Cause of the Postal Deficit.

Charles A. Korbly, who is serving his first term as congressman from the seventh Indiana district, could just as well have contributed to the postal deficit by sending two elephants to his constituents as by franking a few million flower and vegetable seeds. On January 8 Mr. Korbly sent 15,000 packages of seeds addressed to 2103 North Capitol avenue, Indianapolis, which is the congressman's home. It required 45 mail sacks, each sack weighing about 75 pounds, to carry these seeds. The postoffice received no payment for this service of transportation; 12,000 more packages of seeds went in the same manner to Mr. Korbly's home a few days later. These packages will again be distributed by mail (at no cost to young Mr. Korbly, and with no revenue, but at large expense, to the postoffice department) from Indianapolis, to the voters of Marion county, Indiana. Every congressman is allowed to send out 20,000 packages of vegetable seeds and 2,000 packages of flower seeds. This means 3,600 sacks or 270,000 pounds of seeds on which postage is eight cents a pound to the ordinary citizen of the United States. The seed packages average 150 pounds per 1,000 packages. Therefore, it would cost any business house or private individual \$144,000 to mail the seeds that congressmen can send through the mails for nothing. Mr. Korbly's 70 sacks weighed about 3,300 pounds, which, at

#### ONE-HALF CAR OF

Berrydale Experiment Gardens, Holland, Mich.

eight cents a pound, would cost \$264 in postage. If he is a strenuous seed distributor, however, and he would seem so to be, he may borrow enough from some other congressman to double his own portion, as many congressmen living in large cities do not use their allotments of seed.—Collier's.

PHOENIX, ARIZ.—The Phoenix Flower Store doubled its last Easter business this year at prices about the same and plenty of all kinds of stock. Plants and bulb stock were in good demand, the weather was fine and collections good.

LINCOLN, NEB.—Frey & Frey report that their sales at Easter this year were 25 per cent greater than those of last, at about the same prices, except for lilies, which were higher. These were the only scarce items. Flowering plants sold well, but there was not much demand for palms or ferns. The demand was for carnations, roses, lilies, tulips, daffodils and sweet peas in the order named. The warm weather brought everything along rapidly and caused plenty of dust, but there were no complaints and the business was in every way satisfactory.

## The Nursery Trade

### American Association of Nurserymen.

F. H. Stannard, Ottawa, Kans., President;  
W. P. Stark, Louisiana, Mo., Vice-President;  
John Hall, Rochester, N. Y., Sec'y.  
Thirty-fifth annual convention to be held  
at Denver, Colo., June 8-10, 1910.

CHICAGO.—The Beaudry Nursery Co. has increased its nursery grounds to 100 acres and intends to enter the wholesale field in the near future. This firm has a large amount of landscape work on hand.

NELLIE, CALIF.—Robt. H. Asher, proprietor of the Chupa Rosa Park Camp, late of El Cajou, is working up a fine stock of hardy lilies and other bulbous plants and perennials, vines and other stock. He is located about 60 miles from San Diego on Palomar mountain at an elevation of about 4,500 feet above sea level.

THE Forest Nursery Co., is now doing business in El Cajou, Calif. The members of the company are J. H. Dodson and C. C. McCutchen. Mr. Dodson is an authority on the eucalyptus and has been raising the trees for several years near El Cajou. The new company has bought lots near El Cajou village, put up an office and other buildings and developed an independent water supply, using a gasoline engine and pump. While the firm will make a specialty of growing and planting eucalyptus, it will also handle fruit trees, berry and ornamental plants. Miss Katherine Hartman, formerly with the Buafflo News, is secretary and assistant manager.—A.

THE Asaph nursery, in Tioga county, Pa., contains 2,012,000 young forest trees and it comprises five acres. It is understood that Commissioner of Forestry Robert S. Conklin is preparing to increase the size of this nursery to 20 acres. It is expected that a year hence the Asaph nursery will be able to furnish from ten to twelve million young trees. Under a new law the state nurseries are authorized to furnish at the actual cost of production all kinds of young forest trees for planting. The soil of the Asaph nursery is particularly well adapted for propagating white pines, some of the finest stands of native pines having been cut in that vicinity in the early days, and recently much fine second growth has been secured around there. —Wellsboro Agitator.

### American Association of Nurserymen.

#### THE DENVER CONVENTION.

Th thirty-fifth annual convention of the American Association of Nurserymen will be held at Denver, Colo., June 8-10, with headquarters at the Palace hotel. Denver is an ideal convention city, with its wide, shady streets and the magnificent surrounding scenery, and no more pleasant or invigorating trip for the nurseryman who wishes to get away for a day or two from the cares of business can be imagined. The entertainment committee has been busy and has arranged a delightful series of sight-seeing trips, which will be complimentary to members and their ladies. The hotel rates are quite reasonable and the proprietors of the hotel give free the use

# Special Clearance Sale of California Privet

One Year Old, Two to Four Branches

Fine plants for retail trade and cheap enough for lining out.  
Cash with order or satisfactory reference.

6 to 12 inch, at \$3.00 per 1000  
12 to 18 inch, at 6.00 per 1000

These must be sold to make room for our heavy plantings;  
hence the low price. Will pay you to get a few thousand  
for growing on another year. Will make fine two-year plants.

portionate fares will be in effect from intermediate points. Tickets will be on sale daily from June 1 to September 30, inclusive, with return limit of October 31, 1910. Whilst we regret our inability to secure the reduced rates, yet we think, in the long run, that members will be better pleased with the summer tourist rates, because they will not be under the necessity of cutting their visit to Denver short for the sake of the reduction they might have expected to get under the certificate plan. The Rochester nurserymen are getting up a special car load for Denver. Many well known names are on the programme to speak and a most interesting convention is assured.

### Blue Hydrangeas.

Many cultivators of hydrangeas strive to obtain blue flowers, and fail to do so, while others possess plants that bear huge heads of blue blossoms. Sulphate of iron, alum, and iron filings have been applied to the soil by some cultivators with success in some instances, and failures in others. For more than 10 years I had charge of a large garden in Hampshire, says a correspondent of the Gardeners' Magazine, in which nearly 100 huge bushes grew in the open borders. A few specimens measured quite nine feet across, and bore scores of heads of flowers nearly every year. There were always a few large clusters of flowers on these plants which measured about 15 inches across. The bushes were not cut back.

Some of them grew in extremely dry borders, and others in ground constantly saturated with water, which soaked through it from two large ponds. A number bore intensely blue

# Roses! Roses!

We offer for immediate delivery the following Roses on own roots, dormant, field-grown plants, first-class in every way:

- |                            |           |
|----------------------------|-----------|
| 1000 Helen Gould, Balduin, | 12 cents. |
| 300 Pink Baby Ramblers,    | 12 cents. |
| 500 Newport Fairy, - -     | 12 cents. |

## Pink Climbing Rose— Dorothy Perkins

Without doubt the most valuable of all the new Climbing Roses of comparatively recent introduction. The beauty of the double pink flowers is admirably set off by the rich green foliage, which is free from the attacks of insects.

In addition to this charming kind, we have all the popular varieties in climbing and bush Roses. Our General Catalogue, which will be mailed on request, contains descriptions of all the best Roses—also

Fruit and Ornamental Trees, Shrubs and Hardy Plants.

**JACKSON & PERKINS CO.,** Newark (near Rochester), New York  
Nurserymen and Florists. Wholesale only. Use printed stationery.

flowers, with a few pale pink ones on the same bushes; while others, growing only a dozen yards away, had deep pink blossoms, and this mixture of color and variation was the same both in bushes growing dry, as well as in damp soil, year after year. On the same estate, nearly two miles from the gardens, hydrangeas of large size grew in cottagers' gardens, and bore blue flowers chiefly. The water used in the gardens soaked through the valley in the woods, some of the ground there being boggy. Where the water dripped for a time from the taps on to the gravel beneath, the stones turned to a deep reddish-brown color; the water was very hard, and contained iron. I have seen fine blue-flowered hydrangeas in Bournemouth in a sandy border, but never any to equal those here referred to.

FLORENCE, S. C.—DeWitt House will soon erect a greenhouse 50 x 200 feet, which he will run in connection with his nursery business.

## Wichita, Kans.

The Easter season just passed may be classed as generally satisfactory. It was early, but the season was correspondingly early and there was the usual trouble in holding bulb stock back in proper condition for Easter week. The volume of business was somewhat heavier than last year or any previous year and everybody had all they could do. Prices were about as at former years and only slightly advanced over the prices prevailing before Easter and at present. There were abundant supplies of cut flowers of all kinds, the only shortage appearing in cut lilies at the last. The quality of stock was generally good, with roses showing just a little of the effects of the warm weather. The plant trade was heavier than ever, with the call mostly for flowering stock; not much call for ferns, etc. Lilies sold out by Saturday afternoon. The warm weather, which has prevailed almost steadily since March 1, made it hard to have stock hold for Easter. In fact, if Easter had been one week earlier it would have found much more stock in saleable condition, but a dry temperature of 80° for over 10 days or more with not even a frost after the fifth of the month gave a record-breaking speed to all stock coming into flower and whole blocks of lilies and bulb stock wasted their sweetness.

W. H. Culp & Co. had a nice lot of hyacinths, Von Sion and Emperor narcissi in pots and pans which sold out clean. They also had a batch of azaleas that were just right. They found a good sale for a lot of marguerites in 5 and 6-inch pots. These were fine plants and brought good prices.

Mueller, Kuechenmeister, and Culp all report extra heavy cuts of carnations for Easter week. Chas. P. Mueller had in some very nice spireas and hydrangeas, but says the weather was too much for bulb stock.

W. I. CHITA.

## Davenport, Ia.

## A GREAT EASTER TRADE.

Easter trade was without a doubt the greatest, most successful and satisfactory in every way ever experienced in this city. The weather was all that could be desired, the week being warm and bright, which brought out the buyers, and in consequence everything that looked like a flower was quickly bought up. A greater variety and finer display of flowers was never before seen here on a holiday. Lilies, as usual, were the best selling plants, and the number that were disposed of at 25 cents per bud was unusual. Cut bulb stock was a drag until everything else was gone.

March was a record breaker as to warmth and sunshine. The sun shone every day and the glass hovered around 70°, which brought out the greatest amount of flowers ever before cut for Easter or any other day. Instead of hastening stock it had to be held back. Taken all in all, everyone will agree that Easter 1910 will long be remembered, conditions being so unusual. April 1 finds tulips, daffodils, hyacinths and other bulb stock in full bloom outdoors, which is just one month ahead of last year. Plums, cherries, apricots and other trees are white with blossoms, and if this weather continues we will have, as one man puts it, "Fourth of July some time in the latter part of May."

T. E.

EMPORIA, KANS.—The formal opening of the Emporia Floral Co., at West street and Twelfth avenue, was held March 22.

## CHRYSANTHEMUMS..

## The Best for Florists

We are striking 25,000 cuttings per week at present, and will double this quantity soon.

For all this, there will not be enough of many of the best Commercial Sorts to meet the demand.

It is best to decide now on the kinds to plant.

Submit us a list of your requirements, stating how many of each and the date to be delivered,

Will gladly give best terms on rooted cuttings or potted stock.

Remember, we have all that are useful to florists.

## A GOOD EASTER.

Easter has passed into history showing an advance in the volume of business over its predecessor. Unfortunately, the supply of lilies was inadequate and many customers who couldn't get them could not be switched on to anything else. Most of the local growers were either too early or too late. The grower who can time this crop year in and year out in this locality is a wizard. The first flowers should just be opening at the beginning of Easter week to have them right, as it is a hard matter to hold them more than a very few days. The plants and flowers shipped from outside were generally inferior in quality. Prices took a decided jump at the finish. Azalea, Indica and mollis, hydrangeas, rhododendrons, deutzias, spireas, pans of Dutch hyacinths and lily of the valley formed the bulk of the other flowering plants and met a satisfactory sale. Cut flowers had an excellent sale, and with the exception of lilies were never of finer quality. No evidence of pickling was observed and every one was happy. It is impossible yet to give an accurate estimate of the advance in the volume of business, but all are agreed that it was material.

CHICAGO.

### Albany, N. Y.

Local dealers are well satisfied with the results of Easter business. A canvass shows that trade on the whole was better than that of a year ago, but the amount is hard to determine. From 10 to 20 per cent increase is perhaps a safe estimate. The demand for violets was very heavy. It is not too much to say that so many have not been sold in this city before as during Easter week and a few days after. The supply was abundant, however, and the majority of the dealers report that they could get all they needed. Sweet peas sold well and orchids in corsage bouquets with violets or sweet peas were in demand. Roses were about third on the list. Of American Beauties there was a good supply, perhaps more than at the same season for some years back. In plants, azaleas were again in the lead with a tendency on the part of the public to buy the more brightly colored ones, red and scarlet being favorites. The retailers had also an excellent demand

for tulips in pans, hyacinths, Crimson Rambler and the newer varieties of that style of rose. Almost anything with a flower had a market, and for that reason the range of plants sold was very wide. A very important factor in the trade was the exceptional weather. It was unusually warm and more like the end of April than March. Honey bees followed the wagons of the growers into the city along the highways, and as a result every florist's shop had both outside and inside scores of the industrious little workers gorging themselves to the full with sweets from azaleas, tulips, lilies and other flowers. It was an unusual sight to see the crowds passing and the bees working within arm's length distance.

Whittle Bros. had charge of the decorations at the Ten Eyck on the evening of March 19, when the University club gave a dinner in honor of President Taft and Earl Grey, governor general of Canada. On the speakers' table were three large oval baskets, center pieces, of red tulips. The color scheme, red, was carried out also

**BYER BROS.,****Chambersburg, Pa.****Cincinnati.****A WEAK MARKET.**

Since last Monday the market has been weak, flowers for funeral work being about the only thing in demand. This is not nearly enough to consume the increased cut in roses and carnations. The street fakers are having their innings and quantities of stock were removed by them which would otherwise have been an absolute loss. The cleaning up process on Saturday was accomplished at starvation prices and at closing time it would have been an easy matter to buy roses and carnations by the thousand in any of the wholesale houses. Bulbous stock of all kinds is plentiful and one redeeming feature is the good call for sweet peas, daisies, outdoor daffodils and Narcissus poeticus. Violets hereabouts are a thing of the past and the few being shipped to this market show the effects of the warm weather. Good smilax is scarce, but there is an abundance of other green goods.

April 4.—Receipts of stocks are still heavy with very little demand.

**NOTES.**

The next meeting of the Florists' Society will be held in the club rooms Jabez Elliott Flower market on Monday evening, April 11, and a full attendance is desired.

John Fischer, of Huntsville, Ala., was a caller on Friday and was being shown the sights by Will Murphy.

S.

**Euphorbia Jacquinæflora.**

The highly effective group of this brightly colored euphorbia that was exhibited by Mr. Prime, the able chief of the Hatfield House gardens, at the meeting of the Royal Horticultural Society, January 11, served to remind us once more of its usefulness in winter decoration. This group, however, did something more than this; it contributed materially to the attractions of the general display, it afforded an excellent object lesson, and the individual plants set up a standard which cultivators should endeavor to follow.

The color of the flowers is, it should be said, brilliant orange, and of a depth that would justify it being described as orange-scarlet. The flowers are arranged along the upper side of the elegantly arching stems, and with their background of bright green leaves can be utilized in decorations of the most divergent character.

It may be of interest to recall the fact that *Euphorbia jacquinæflora* is a native of Mexico, and to state that it was introduced to British gardens about 73 years ago. The first figure that was published in this country was in the volume of Paxton's Magazine of Botany for 1837, and this is of great excellence. The plant from which the spray illustrated was obtained was

# Richmond Bench Plants

Grafted stock, fine plants for out-door planting or replanting in the benches, cut back to about 18-inches; per 100, \$5.00.

**Kaiserin**, 2-inch pots, propagated last fall. Now ready to plant in the benches, \$4.00 per 100, or \$35.00 per 1000.

**PHILADELPHIA, PA.**

growing in the collection of Messrs. Luccombe Pince and Co., of Exeter. In this publication the plant was figured under the name of *Euphorbia fulgens*. A year later it was figured in the Botanical Magazine (t. 3, 675) under the name of *Euphorbia jacquinæflora*. Since that time the plant has received a full share of attention in gardening literature, and scores of articles must have been written explanatory of its cultural requirements.

These, it must be said, are of the simplest; but simple as they unquestionably are, they must be complied with. Were one to summarize, it might be said that the main essentials are early propagation, a brisk temperature, and a light position, with rather liberal supplies of water. The first step in raising a young stock is to cut the old plants back when their flowers have lost their beauty, and keep them rather dry for a time, and thus assist the wounds to heal over. With a temperature of about 70°, new growths will soon appear, and when three or four inches in length they should be taken off close to the old stems and utilized in the increase of stock. Sand is preferable to soil for rooting the cuttings, and they may be put singly in 2-inch or four or five in 5-inch pots. Those rooted singly will require shifting on until they reach 5 or 6-inch pots, according to their vigor or the purpose for which they are required. The others are potted off singly and shifted on until they reach pots of the sizes mentioned, but if rather large specimens are required they can without being divided be shifted into 8-inch pots. An excellent compost is one consisting of three parts each of peat and fibrous loam, and one part each of leaf-mold and silver sand.

When grown in a mixed collection where it is difficult if not impossible to give them a position near the glass, the results are seldom so satisfactory as could be wished. The best place for them is a spacious heated pit where they can at all stages be within a short distance of the glass, and enjoy uninterrupted light, except when a light shade is considered advisable. Here they should receive rather liberal supplies of water when they are becoming pot-bound, with an occasional supply of liquid manure of a moderate degree of strength. The pit should be moderately ventilated, and when it is closed in the afternoon a light overhead syringing will be beneficial. Here we have the code of culture in a nutshell, and, if anything further need be

## Geraniums

**My Maryland, Mrs. Jardine and Beauty**.....\$6.00 50.00

## J. A. Budlong,

37-39 Randolph Street, CHICAGO.

LOS ANGELES, CALIF.—The Ingleside Floral Co. says that its sales at Easter this year were about 25 per cent greater than those of last at prices about the same. Lilies and spireas were scarce in plants, as were all outdoor cut flowers, but there was plenty of indoor grown. Everything sold up clean and the firm says it was undoubtedly the best Easter it ever had. Sunday was wet but nearly all orders had gone out on Saturday, so it did not affect trade.

## A. N. PIERSON, Inc. CROMWELL, CONN.

## JOS. H. CUNNINGHAM, Delaware, O.

POUGHKEEPSIE, N. Y.—Business was good in every respect with the Saltford Flower Shop at Easter, and better business or better weather could not be wished for.

WARREN, O.—A. T. Hoyt has sold part of his lot and this cut off part of his glass. He has about 5,000 feet left and will probably have the use of all of it for a year longer.

## Double Your Carnation Profits==Last Chance to Buy

The trade has certainly bought liberally of Carnation Dorothy Gordon this winter and spring—orders for rooted cuttings have taxed our producing capacity nearly to the limit, but we're proud of the stock we've sent out, and judging by their kind letters, our customers are pleased, too. And next winter, when all those splendid plants come to bloom and these florists begin to make money as they have never before made it from carnations, they'll be still better satisfied!

Have you delayed getting in your order for this magnificent new Carnation? If so, this advertisement is addressed to you; we have just a few thousand more cuttings in the sand for April 15th delivery and when these are taken, no more will be available till next winter.

The merit of this splendid new variety has been thoroughly proved, and the only possible loss you can experience in the matter is to let this opportunity slip by and stick to the old sorts you've been growing in the past.

# Carnation Dorothy Gordon

Has a splendid pedigree, a long list of good qualities and an enviable record of prizes and awards. It is a seedling of Lawson on Enchantress, possessing the principal merits of these varieties without their faults. It is vigorous in growth and is perfectly free from disease. Its flowers are a trifle darker than Pink Enchantress; they are borne in double the quantity, and are of exceptional size—averaging over 3 inches in diameter. They are very fragrant and keep exceptionally well. The market price paid for Carnation Dorothy Gordon is regularly 50 per cent. more than that paid for Enchantress.

From the very first Dorothy Gordon has established a splendid

record as an exhibition variety. High awards were given it at the meeting of the American Carnation Society in 1908 and at the National Gardeners' Association meeting in New York in 1909. This season it has attracted much attention and has won further renown at the Pittsburgh and Toronto meetings.

In order to give the trade a fair opportunity to test it thoroughly, we have from the first sold rooted cuttings at a price which would get it established everywhere. This low figure still prevails and the remaining stock will be sold at these prices: \$10.00 per 100; \$75.00 per 1000.

No further offers this season.

**JOSEPH HEACOCK COMPANY, Disseminators, Wyncote, Pa.**

## Pansy Plants

Large stocky plants in bud and bloom, the very best strain, at \$1.25 per 100, \$10.00 per 1000; smaller plants \$2.00 per 1000.

Stocks, Dusty Miller, Verbenas, Phlox, Alyssum, Heliotrope, Ageratums, Mme. Salleron Geraniums, Asp. Sprenger and Scarlet Sage, fine plants out of 2½-in. pots, \$2.00 per 100; 300 for \$5.00; \$15.00 per 1000.

Cabbage Plants for field, \$1.25 per 1000.

**J. C. SCHMIDT, Bristol, Pa.**

San Francisco.

TRADE QUIET.

Business for the past few weeks in the city has been rather quiet, but the Easter trade helped in a great measure to place the sales for the month of March far above the average. There was a good supply of nice stock in the market to meet all demands for the Easter trade. Cut lilies, roses, carnations, daffodils and Narcissus poeticus were plentiful. There was a scarcity of violets, due to the fact that the season is about over and also potted lilies, which did not reach a very high standard of quality.

At the last meeting of the Pacific Coast Horticultural Society the following committees were named by that body: By laws, flower show and picnic. The last named committee intends to arrange for a private picnic to be given some time during the month of July for the members of the society and their families.

S. R. Lundy, Pacific coast representative of W. A. Manda, South Orange, N. J., recently returned from an extended trip through the middle west. He reports business good.

Visitors: A. Ringier, representing W. W. Barnard & Co., Chicago, and J. R. Fotheringham, of F. R. Pierson Co., Tarrytown, N. Y.

ARTUS.

Cleveland.

Carnations, roses and sweet peas are very abundant, but have cleaned up remarkably well considering the immense quantities received daily since Easter. Easter lilies are not very plentiful; valley and violets sold well. Considerable stock is moved in job lots.

At the recent opening of the new store, or rather as a farewell to the old one, the J. M. Gasser Co. advertised that it would present to every caller a half dozen roses. This offer was made

## Gold Letters

Gummed Gold and Purple Letters.

For inscriptions on Floral Designs.  
Best and Cheapest on the Market.  
Send for samples and prices.

J. LICHTENBERGER.

1566 Avenue A, NEW YORK.

Telephone: Lenox 5644

Mention the American Florist when writing

## THE BEST WAY

to collect an account is to place it with the

## National Florists' Board of Trade

56 Pine Street, NEW YORK.

WHY? Because many debtors will pay the Board fearing otherwise a bad rating in our Credit List Full information as to methods and rates given on application.

## Sheep's Head Brand

## Pulverized Sheep Manure

The Ideal Plant Food for Florists.

Write today for Prices and Booklet.

NATURAL GUANO COMPANY,

Aurora, Ill.

## Cattle Manure in Bags Shredded or Pulverized

Pure—dry—uniform and reliable.  
The best of all manures for the greenhouse. Florists all over the country are using it instead of rough manure.

## Pulverized Sheep Manure

Absolutely the best Sheep Manure on the market. Pure manure and nothing else. The best fertilizer for carnations and for liquid top-dressing. Unequalled for all field use. Write for circulars and prices.

The Pulverized Manure Company  
32 Union Stock Yards, Chicago.

USE KRICK'S  
PERFECT POT HANDLES  
AND HANGERS.

Just the thing for Easter.  
When crowded for space will sustain the weight of 100 lbs. Samples and prices on request.

CHAS. A. KRICK, 1164-66 Greene Ave., Brooklyn, N. Y.  
Long Distance Telephone, 178 Bushwick.

## AMERICAN FLORIST

Try it now.

Every advertisement represents a genuine want. It pays to answer them.

## Wittbold Watering System

The saving in time and labor for one season will pay for a complete equipment.

Crimped Invisible  
**Carnation Staple**

(PATENT APPLIED FOR.)

For repairing split carnations. 1000 for 50 cents Postpaid.

**L. J. WAITE, 293 Main St., Springfield, Mass**

SAVANNAH, GA.—A. C. Oelschig & Son calculate their increase in Easter sales at about 30 per cent, and prices did not advance over the usual, there being plenty of all kinds of stock. Lilies, azaleas and hyacinths sold better than spireas. Customers nearly all bought Easter presents and decorative plants were wanted for that purpose.

# Ammoniated Lawn Lime

**Kills Weeds.      Makes Grass Grow.**

Applied as a light top dressing to lawns it kills all flat leaved weeds such as **Dandelion, Daisy, Plantain, Sorrel, Chickweed, Moss, etc.,** in 48 hours and without other fertilizer produces a wonderful, luxuriant, rich, green growth of lawn grass—which is distinctly noticable 50 feet away.

The use of Ammoniated Lawn Lime supersedes hand weeding of lawns, putting greens, etc. It saves the grass from being pulled up and in many cases ruined. Grasses take a new vigorous growth, avoiding probable trouble in the future.

**Quantities:** If very weedy 1-lb. to 40 square feet, 25-lbs to 1000 square feet, (20x50). Half to one-quarter amount if moderately weedy.

**ABSOLUTELY GUARANTEED.** Money refunded if not satisfactory.

We want **Seedsmen or Florists as agents and distributors** in every important city and town.

**Retail Prices:** 2-lb. cans, 25c, 50 cans per case. 5-lb. cans 50c, 20 cans per case. Bags, 25-lbs. \$2.00; 50-lbs. \$3.50; 100-lbs. \$6.00; 1000-lbs. and over 5c per lb.

Descriptive Circular and Wholesale Prices on Request.

## SUPERIOR CHEMICAL CO.,

Also **Violet Thread** for tying up Violets. Price of both, \$1.25 per lb. express or freight paid in good sized orders.

**JOHN C. MEYER & CO., 1449 Middlesex St., Lowell, Mass.**

## Evergreen Brand Flower Fertilizer.

A Pure Plant Food immediately available. It permanently enriches the soil. It prevents the onslaught of plant diseases or insect pests. Can be used at any time during the growing season, dry or in solution. Put up in 12 pound cans, Price, \$2.00 each.

**For Sale by Leading Jobbers**

Further information can be obtained from

**D. D. JOHNSON CO., 64-66 Wabash Ave., CHICAGO.**      **Manufacturers,**

## The Mastin Automatic Whitewash and Spraying Machine

**Is Reliable, Practical and Durable**

The tank is made of galvanized sheet steel, and in brass.  
The pump is of brass throughout, simple and powerful.  
The mixing device keeps the contents of the tank well stirred up from start to finish.

When the machine is filled to within six inches of the top, a few strokes of the pump will compress enough air in the tank to produce a continuous mist-like spray for 15 minutes.

All parts are made to gauge and may be had for repairs.  
Ask your dealer about our **Extension Hose, Extension Rods,** and the **Mastin Whitewash Nozzle** for Bordeaux mixture.  
Sold through Seedsmen, Dealers in Florists' and Poultry Supplies.

**J. G. MASTIN & CO., 3124 West Lake St., CHICAGO, ILL.**

busy and watch results.

**SUB-TARGET GUN COMPANY**  
Steam Engineering Department,

316 High Street

BOSTON, MASS.

**Concord Junction, Mass.**

Pansies have wintered better than ever in this section, owing to the heavy covering of snow on them all winter. All hands will soon be busy at Leonard Cousins, Jr.'s, establishment on pansies, geraniums and other bedding plants, which are shipped to florists all over the country. The advance orders now in indicate a heavy demand for this class of goods this season. Pansies have been a specialty here for 15 years, and his "Superb" strain is the result of years of painstaking selection of stock. All the seed is home grown from the best plants among the many thousands grown here.

Carnations are one of the main products here. Among the varieties grown are White Perfection, which succeeds here admirably. About 10,000 of this variety will be planted next season in the new large house which is being erected by the King Construction Co. Beacon is grown for red and does well, and Winsor, which carried an enormous crop of blooms for Easter, will be grown quite extensively next season. Variegated Lawson is one of the standbys and came in just right for Easter. No. 20, a bright pink kind, produces an abundance of blooms during the winter and fills the bill for that color. No. 14, another new light pink variety originating here, is of large size and pleasing color and takes well with the retail buyers. This will be tried out in quantity. A batch of promising seedlings, in light pink, dark pink and white, will be planted next season and their virtues or failings noted, as Mr. Cousins believes it is profitable for the grower to produce his own individual stock. Easter trade was the best ever. His carnations were just right in supply, the quality being fine, and sold at good prices.

**PUEBLO, COLO.**—G. Fleischer reports his total sales for Easter as about the same as those of last year. Carnations were cheaper than last year and there was plenty of all stock. Cheap plants sell best here, and there is no call for large baskets.

## The Hump That Humps

It's the hump in the Corrugated that makes the other boilers hump themselves to match it for economy. It may not be a beautiful hump, but it makes a coal bill that's good to look at—and that's what counts.

For many purposes there is not a boiler its equal for greenhouse heating economy, which statement is not "hot air," but coal facts.

We were greenhouse heating engineers years before we began building greenhouses and we have been building greenhouses over a quarter of a century. It stands to reason we thoroughly know both ends of the business—and we do. Write us.

**Hitchings & Company**  
Elizabeth, N. J.

**The Superior Standard****RETURN FLUE FIRE BOX BOILER**

contains more heating surface, and less water space than any other steel boiler.

 $\frac{2}{3}$  of the heating surface is in the tubes.

Ask the  
man that  
knows the  
one using  
different  
style boilers  
—names are  
yours for  
the asking.

After using  
our boiler  
one season,  
you will say  
like all  
others:  
Nothing but  
"Superior"  
for me.

This boiler has given better satisfaction than any other boiler on the market  
**MADE IN NINE (9) SIZES FOR HOT WATER.**

Send for catalogue and list of growers that are using this boiler.

**HOT WATER BOILER.**

We manufacture every type of boiler in use, but our greenhouse boiler, because of its special construction, possesses many advantages over any other type.

Prices and catalogue on application.

**KROESCHELL BROS. CO.**

452 W. Erie St. CHICAGO

**BANGOR, ME.**—A 25 per cent increase over those of last year is Adam Sekinger's Easter record of sales. Lilies were higher in price and more could have been sold. Roses were slow, but carnations and violets had a heavy demand. All the churches decorated and every one wanted lilies.

**OGDEN, UTAH.**—F. J. Hendershot says his sales this year at Easter were 25 per cent greater than those of last at similar prices. Lilies were very short in the stem, but there was plenty of all kinds to go around. The spring is too early according to Mr. Hendershot.

# EXTRA BENCH ROOM

At this time of the year the capacity of every greenhouse is taxed to its limit. **Bench Room** is the one important feature to consider. Remember how well

## Shelf Brackets

will relieve this situation, and save time, trouble and room. The **Lightest, Strongest** and most **Durable** on the market. Made for 3-4 to 2-inch pipe.

Net Prices: 12-in., single, 18c each; 8-in., single, 14c each; 8-in., double, 20c each.

Please mention size of pipe post when ordering. Remit small amounts in stamps or Money Order.

**King Iron Frame Greenhouses** are still leading, and if you "Ask the man who has one, you will know why." **This Iron Frame covers many acres in the United States, England, France and Germany.**

### Plants and Cold.

It has always been more or less of a puzzle, even to the scientist, to decide how certain plants are able to survive the winter in the leafy condition. It is sometimes stated that the cells of such plants are so small that freezing the water in them does not rupture the cell walls, or even that the cells do not contain sufficient moisture to make its freezing a disturbing feature. A Swedish botanist has recently offered another explanation to the effect that such plants, at least in northern Germany and Scandinavia, contain sugar instead of starch during winter and that the sugar in some way protects the protoplasm from freezing.—American Botanist.

### The Cost of Fertilizers.

It is surprising, even amusing, to note that some agricultural societies and farmers' unions are clamoring for lower prices on commercial fertilizers and while it is a well-known fact that practically every element that goes into the manufacture and composition of commercial fertilizers has advanced greatly in price the last few years, as have also all classes of labor that produce the goods, according to an authority on fertilizers. In the past two or three years, animal ammoniates have more than doubled in price, and the overhead charges in the fertilizer business have increased greatly.

And against this, agriculturists and planters are receiving a much higher price for all of their products than they did a few years ago. Taking all these facts into consideration, it would quite naturally seem that the prices of commercial fertilizers advance, instead of being reduced.

### The King's Gardener.

Some very interesting popularly-written notes on Mr. Mackellar and his duties recently appeared in "M. A. P." "Sometimes an order will come in the morning to Windsor for a large consignment of cut flowers and for several bouquets to be sent at once to Buckingham palace. A special staff of gardeners is put on to cut the required flowers, which are then inspected by the head gardener, who directs what blooms are to be used in the making up of the bouquets and the particular way in which they are to be designed. A bouquet for her Majesty is always composed of pure white flowers; the Princess Victoria likes the introduction of purple into a bouquet, and the Princess of Wales favors cream and crimson roses more than any other flowers. The garden-in-chief is not, as is the manner with guides, at all loquacious. He thinks that the beauty of the gardens should speak for themselves, though he may sometimes enlighten visitors on their historical aspect, which is extremely interesting. Occasionally, however, he comes upon a real horticultural enthusiast as he did when the Queen of Italy visited the Frogmore gardens some years ago, and to such the head gardener delights to point out the really wonderful and beautiful results that can be achieved in a garden under modern scientific methods."

Boston, Mass., June 1910. B. H. FARR, Reading,  
Pa., Pres.; A. H. FEWKES, Newton Highlands,  
Mass., Sec'y.

## MORE TALKS TO THE CUSTOMERS

W. N. RUDD has written a series of seasonable articles for the National Council of Horticulture press service, which are so full of practical suggestion for those numerous florists, seedsmen and nurserymen who have to deal personally with many of their customers at this season of the year that we print them in full herewith, so that none of our readers may miss them. Employers will find this excellent material for their assistants and clerks. Every employe who comes in contact with customers should be familiar with the facts here set forth.

### How to Have Good Geraniums.

No plant is so easy to grow, nor so free from disease and insects as the geranium. It stands neglect and abuse and carries itself bravely, putting forth an occasional bloom, even when conditions are such that other plants would pine and die. Truly it is the lazy man's (or woman's) flower. It demands little skill for its growing, and repays better than almost any other plant, the little effort required to attend to its few wants.

Geraniums are sold so cheaply by the florist, and there are so many beautiful new varieties, that it hardly pays to grow one's own plants. It is, however, perfectly feasible to carry the old plants through the winter in the house in pots, but such plants do not bloom enough inside to make good house plants, and are not so good to plant out in the spring as the strong, young, vigorous plants obtained from the florist. The old house plants, if used, should be cut back thoroughly—down to six inches from the ground, as they are generally long-legged and spindly and will never make good, vigorous, shapely plants otherwise. It is also possible to grow geraniums from cuttings rooted in the house, but one has to wait a long time for such plants to grow and bloom.

The geranium bed should be in a sunny place. If too shady they grow long and slender, produce abundance of large leaves, but do not bloom. The soil in the bed should not be too rich. A little old rotted manure worked into the soil is all they need. In over-rich soil they grow too rank and do not bloom so well. Geraniums, unlike many other plants, will do well year after year in the same bed. Many people have trouble getting plants out

of the pots, and yet it is a very simple matter. Turn the pot upside down, supporting the soil with the left hand, the stem of the plant between the fore and middle fingers. Hold the bottom of the pot in the right hand, and with a sharp downward motion strike the top, still turned downward, a sharp blow on a box or block of wood—the handle of a wheelbarrow is good if one has been using it and it is near by. The pot will then slip off easily, leaving the plant with the ball of earth in the left hand. If it does not come off, hit it again, a little harder—no need to break the pot, however.

If the roots are densely matted, pinch them to break them apart and loosen them. No matter if you break some of the roots—it will do no harm. Plant them firmly a little deeper than they were in the pots. Give the bed a good thorough soaking and then let them alone, except to keep the top soil stirred and the weeds down. Don't be everlastingly squirting water on them with the hose. They don't like it. Run your hand into the bed occasionally, and if the under soil (never mind the surface) is moist, keep on letting them alone. If moderately dry, give them a thorough soaking, loosen the soil the next day and then go back to the let-alone practice.

Don't sprinkle. When they must have water, soak them down to the roots and loosen the top soil next day.

One can hardly understand why half the geraniums grown are red, when there are so many other beautiful and delicate colors and shades; however, there is no disputing about taste in such matters; but, any way, don't plant geraniums in a round bed and in the center of the lawn. It dwarfs the place and spoils all artistic effect.

### Trees in Place and Out of Place.

Among many good people who use more sentiment than reason, or who lack knowledge of the facts, it has become a fad to say it is a crime to cut down a tree and that it is always, and under any circumstances, an act of greatest virtue to plant one.

To one who gives thought to the matter, these accepted axioms may be reversed; and we can say with all seriousness and all truth, that there is no town in this country where the judicious use of the axe among the trees in some part of it or another, is not demanded; and, on the other hand, thousands of trees are being planted where no tree should ever be placed.

Each variety of fruit or ornamental tree, when it reaches maturity under reasonably favorable conditions, has its established size or spread of branches. Among the better shade trees commonly planted, this reaches 40 to 50, and even a greater number of feet in diameter. In dense forests we see the trees stretching up and up, after the precious sunshine and air; losing their side branches and becoming a collection of giant telegraph poles with pitiful little bunches of green at the top; nothing beautiful about them, and all smaller and weaker specimens killed out or crippled.

Every tree, to be beautiful, must have room to expand and develop to its proper proportions, and to retain the side branches with which nature always furnishes them, under such conditions, unless thwarted by the bungling hand of the hired man with the axe or saw.

Street trees should never be planted to be ultimately nearer than 40 feet apart. Most of the better shade trees are slow in growth. It is quite advisable to plant quicker growing trees in between them for immediate effect, to be cut out later when they begin to crowd and injure each other.

Quite often when this time comes, the poorer, quick-growing tree is so much larger and finer looking a specimen, that the owner's heart fails him, and he compromises by hacking off the branches of all, ruining the whole row and, at that, only affording temporary relief, as it must be done again, and again. In a few years the poorer and short-lived trees begin to die, and soon only a straggly row of melancholy cripples exists, where might have been noble specimens, good for generations to come.

Trees should never be planted so as to densely shade a building where humans or animals abide. The sun must reach every part of our dwellings for at least a part of the day, or the doctor will be a certain and frequent visitor.

Trees must not be planted in the center of the lawn. At the side or the rear is the place for them if they will there have room to develop. A spreading apple tree or two in the backyard is good for shade and for its fruit—if it is sprayed to kill the insects and fungous diseases.

If the house is densely shaded, use the axe ruthlessly and open the place up to admit air and light. If two trees are crowding each other, select the best, or best located, and put the axe

to the other, unless it is small enough to move.

Don't trim up—cut down. One perfect tree is of more value than a yard full of crippled or stunted specimens.

### Primula Obconica.

The accompanying illustration of *Primula obconica* is from a photograph of a plant grown by Henry Schmidt of Union Hill, N. J. Mr. Schmidt makes a specialty of *Primula obconica* and grows especially the Ronsdorfer hybrids, which he considers best in point of size of flower and color. The plant figured is *P. obconica lilacina*, a fine lilac colored variety, growing in a 6-inch pot.

### House and Soil for Sweet Peas.

ED. AMERICAN FLORIST:

What do you consider a modern sized greenhouse for sweet peas and chrysanthemum growing, and how would the soil have to be prepared?

F.

Sweet peas and chrysanthemums may be grown in almost any sized

*Primula Obconica.*

house, but the most modern and best construction is anywhere from about 20 feet up in width, the length depending entirely upon how much money can be spent upon it. Houses from 100 to 200 feet are excellent. Growers do not usually provide the best of soil for these two crops and soil that has grown a crop of roses or carnations is often livened up with a little fresh and used for them. An excellent article on the preparation of soil for roses appeared in our issue of April 9, page 528, and a good idea can be obtained from this, though soil for sweet peas or chrysanthemums is not needed so rich as for roses and less manure may be allowed.

VINELAND, N. J.—Miss Lealman has opened a retail store at the Bijou.

HACKENSACK, N. J.—The contract for the erection of a greenhouse for John D. Carroll of Teaneck has been let to Steenland Bros., of Palisade Park.

TAMPA, FLA.—The city will soon have another up-to-date establishment. It will be situated on two Tampania tracts at the junction of Grand Central avenue and Bay boulevard, two prominent thoroughfares. Newaman, of Boston, is at the head of the enterprise.

## THE RETAIL TRADE

### Basket of Rambler Roses and Hyacinths.

The simplest forms of decoration are often the best and nothing could be simpler or prettier in its way than the elegant Easter basket depicted on the opposite page. This was the work of Wm. J. Smyth, of Thirty-first street and Michigan avenue, Chicago, and is in that well-known decorator's best style. At Easter, Memorial day and similar festivals these baskets are greatly in demand and every retailer should make up few or many, according as his trade demands. They show a good profit, as a far higher price can be charged than for the plants used in their making, while the time taken in making them is not very considerable. Lightness and grace in arrangement, and, at the same time, a fairly full appearance to satisfy the customer are the principal points to study in these baskets, a good eye to color effect being also a useful asset to the decorator.

### The Pansy Window.

Using pansies at this time of the year for a novel window display is most opportune and will lend to a great deal of ingenuity. Where the window has sufficient depth a hanging basket for the center composed of three round flat baskets with a sufficient border to allow it to be filled with growing pansies, to make it as long lasting as possible, is full of suggestions. These three baskets can be attached together by means of a stout chain or rope which, in turn, can be covered with asparagus vine. This vine may extend in strands below the last basket and be gathered together in the center where a small round ball of pansies can be suspended. Each tray basket can be filled with a different color pansy if desired.

The many beautiful shades of lavender found in the large spring variety make a brilliant showing. Do not mix them, but group them in one tone effect. On the ground floor of the window groups in boxes or potted can be arranged so as to have the low Italian garden effect, grouping the same shades as used in the hanging basket effect, leaving a vacant space under where the basket hangs and covering this with green moss.

Back of this arrangement a curtain of asparagus vine or southern smilax will give a pretty setting. If a touch of color is desired a row of boxes filled with growing yellow tulips arranged along the back of the window and close to the green curtain makes a striking contrast. If a still further touch of yellow is desired yellow pansies could be attractively used as a border to the crescent effects on the ground or whatever figure is most appropriate for the size of the window to be decorated. Lobelias can also be used effectively where an odd color combination is desired.

If an elaborate setting is desired, a mirror placed under the hanging basket—reflecting its pansies of many lavender hues—lends to the attractiveness, or a pond with a small stream of water spouting up to the hanging baskets is a good setting. Gold fish could be used advantageously in the pond.

BASKET OF RAMBLER ROSES AND HYACINTHS BY WM. J. SMYTH, CHICAGO.

### New Store at Cleveland, O.

We take pleasure in giving herewith an illustration of the new retail store of Mrs. Ella Grant Wilson, on Euclid avenue, Cleveland, O. About a year ago a cyclone wrecked Mrs. Wilson's store completely and, in consequence, she has been doing nothing in the way of retailing for nearly a year. But the new store has led to great activity, and it is certainly a model one. It was opened on March 17. The opal refrigerator is 8x10x10 feet and has front and rear compartments and a double plate glass bay front. The

CANNA KING HUMBERT AT MT. GREENWOOD CEMETERY, CHICAGO.

Expert Judges Say it is the Best Canna to Date.

store is 18x80 feet with a light basement the whole length, giving ample storage facilities. The color scheme is light green walls with white fixtures, the whole producing a pleasing soft toning that gives to all colors in plants and flowers their full value. We are very pleased to note that this enterprising lady has come out of her troubles so well, and she has our sincerest wishes for a prosperous future in this fine new store.

### New Store at Wilkesbarre, Pa.

The illustration herewith shows the new store, "The Fernery," at Wilkesbarre, Pa., recently opened by Mrs. I. Herbert. Judging by the reception given it in the local press and its fine appearance, Mrs. Herbert has reason to be proud of her new store. Hundreds of people visited it on the opening day and it was a revelation to most of them in the possibilities of tasteful and effective arrangement of cut flowers and plants. The store itself is finished in green and white and presents a charming appearance, while the large and well assorted display of palms and ferns and cut flowers of all kinds was a decidedly attractive one. Some handsome novelties in baskets were also shown and the fixtures throughout were tastily arranged, the window treatment being strikingly unique. Souvenirs consisting of carnations, were distributed throughout the day to the visitors. Mrs. Herbert has been in business for some time, with headquarters on West Northampton street and her prospects for success in the new location are exceptionally bright.

SEDALIA, Mo.—The Archias Seed Store has purchased the greenhouses, business and good will of Gelven & Son of this city at a cost of \$20,000. Owing to ill health Joseph Gelven had to retire from business, but Chas. Gelvin is retained as manager.

## THE CANNA.

### Notes on Cannas.

Cannas have been universal garden favorites for a long time and they will always be regarded as one of the most beautiful and useful of bedding plants. Their noble foliage and handsome flowers place them in the front rank of bedding plants. Few subjects in plants have ever been taken in hand which have so richly rewarded the hybridist's labor. The great number of varieties listed in the cata-

logue embracing a range in form and colors astonishing in itself, and it is equally surprising to note the number which are added each year. It seems each year as though the height of perfection is reached, and yet, when we see the results of the hybridizer in new introductions, we have to confess that there are improvements in many ways.

What the future will bring forth no one can say. In looking back 20 years I still can see those old fashioned cannas we used in decorating beds of tropical and sub-tropical character—all tall growing varieties with very small flowers. One could not use a canna bed in floral displays; they were not effective enough and were mostly used in connection with other tall growing plants. When one thinks of the wonderful progress made in cannas inside of a quarter of a century, one naturally wonders what they will look like 25 years hence. It would be very difficult, indeed, today for the average florist and private gardener to do his bedding without the canna. For large beds there is nothing that can beat it. From the end of June until cut down by frost the plants are flowering profusely and improving in appearance right along.

Amongst the newer cannas, of which a good number are of American origin, we have some splendid varieties. Some of the best tall growers with red flowers and green foliage are A. Bouvier, Beaute Poitevine, Flamingo, Duke of Marlborough, D. Eisele and Chas. Henderson. In crimson foliage and red flowers—King Humbert, David Harum, Egandale and Leonard Vaughan Express, Crimson Bedder, Premier and Pres. McKinley are some of the best dwarf ones in red. In red, gold edged, we have Queen Charlotte, Mme. Crozy, Souv. de Antoine Crozy and Cinnabar. In pink and salmon shades (green foliage) we have Martha Washington, Mlle. Berat, Virginia and Betsey Ross. In whites (green foliage) Alsace and Mont. Blanc; in yellow (green foliage), Buttercup, Richard Wallace, Long Island and Florence Vaughan. Those varieties are about the best bedders, as far as I know of, here in the northwest. All are of the large flowering Crozy type.

Undoubtedly there are some more varieties worthy of mention like Venus, Papa Nardy, Milwaukee, Queen of Holland, also the orchid flowering and the ornamental foliage varieties, but I think the varieties mentioned above are about the best bedders on which we can rely. In conclusion I wish to say that there are very few of the newer varieties which are not worth a good trial for they nearly all show some improvements in one line or the other.

LOUIS BOEGLIN.

FIELD OF CANNAS AT VAUGHAN'S GREENHOUSES, WESTERN SPRINGS, ILL.

## Canna Work at Cornell.

ED. AMERICAN FLORIST:—

I read with interest the article by Antoine Wintzer on cannas in your issue of April 2. My attention was especially attracted by his remark that some experiment station ought to take upon itself to make a collection of the various varieties, in order to keep the nomenclature straight, to reduce the list, and to give out a statement each year of the value of novelties.

The division of floriculture here (Cornell University Experiment Station, Ithaca, N. Y.) has had that very thing in mind, and a start has already been made. Arthur T. Boddington, New York, and Prof. Cowell, of Buffalo, have been kind enough to send us 49 varieties of cannas this spring as the nucleus of a collection, and all we want now is the co-operation of seedsmen and growers in order to make the work thoroughly effective. I therefore beg you to do me the favor to make it known to your readers that the division of floriculture would be very glad to receive new varieties of cannas from any who are sufficiently interested to furnish them. The following varieties are now on hand:

Alice Roosevelt, Allemannia, Alphonse Bouvier, Alsace, Austria, Beate Poitevine, Black Beauty, Black Prince, Brandywine, Buttercup, Chas. Henderson, Cinnabar, Comte de Bouchard, Crimson Bedder, David Harum, Duke of Marlborough, Egandale, Explorateur Crampbell, Express, Florence Vaughan, Gladiator, Indiana, Italia, J. D. Eisele, King Humbert, Kronus, L. Patry, Leonard Vaughan, Louise, Louisiana, Mlle. Berat, Mme. Crozy, Mrs. Kate Gray, Mrs. W. F. Kasting, Musæfolia, Newburg, Pennsylvania, Pillar of Fire, Premier, Pres. McKinley, Queen Charlotte, Richard Wallace, Robusta, Shenandoah, Souvenir d'Antoine Crozy, Tarrytown, Tennyson, W. N. Rudd and Wyoming.

L. B. JUDSON.

## Grass.

Lying in the sunshine among the buttercups and the dandelions of May, scarcely higher in intelligence than the minute tenants of that mimic wilderness, our earliest recollections are of grass; and when the fitful fever is ended, and the foolish wrangle of the market and forum is closed, grass heals over the scar which our descent into the bosom of the earth has made, and the carpet of the infant becomes the blanket of the dead. Grass is the forgiveness of nature—her constant benediction. Fields trampled with battle, saturated with blood, torn with the ruts of cannon, grow green again with grass, and carnage is forgotten. Streets abandoned by traffic become grass-grown like rural lanes and are obliterated. Forests decay, harvests perish, flowers vanish, but grass is immortal. Beleaguered by the sullen hosts of winter, it withdraws into the impregnable fortress of its subterranean vitality, and emerges upon the first solicitation of spring. Sown by the winds, by the wandering birds, propagated by the subtle horticulture of the elements which are its ministers and servants, it softens the rude outline of the world. Its tenacious fibers hold the earth in its place, and prevent its soluble components from washing into the wasting sea. It invades the solitude of deserts, climbs the inaccessible

NEW "WINTZER" CANNAS OF THE CONARD &amp; JONES CO., WEST GROVE, PA.

Rosea Gigantea (Rose Pink). Meteor (Deep Crimson).  
 Gladiiflora (Crimson and Rose). Mont Blanc Improved (White) Minnehaha (Pink Gold Shaded).

slopes and forbidding pinnacles of mountains, modifies climates and determines the history, character and destiny of nations. Unobtrusive and patient, it has immortal vigor and aggression. Banished from the thoroughfares and the field, it abides its time to return, and when vigilance is relaxed, or the dynasty has perished, it silently resumes the throne from which it has been expelled, but which it never abdicates. It bears no blazonry of bloom to charm the senses with fragrance or splendor, but its homely hue is more enchanting than the lily or the rose. It yields no fruit in earth or air, and yet should its harvest fail for a single year, famine would depopulate the world.

JOHN J. INGALLS.

STOCKTON, CALIF.—The San Joaquin Floral Co. nearly doubled its sales this year at Easter at rather better prices. Plants were scarce, as were cut lilies. In plants, lilies, azaleas, heaths, cyclamens and primulas were most in demand, lilies, carnations, roses and bulb stock being the best sellers in cut flowers. The weather was wet, but this did not hinder trade. There were no outdoor flowers to speak of.

CLEVELAND, O.—Frank Smith is visiting in Bristol, Conn.

GARY, IND.—Franzen & Little have opened a flower and tree store at 644 Broadway.

DAYTON, O.—The Montgomery Horticultural Society held its regular monthly meeting April 6.

NORFOLK, CONN.—Robbins Stoeckel is planning to erect a greenhouse on his Litchfield road property.

CHIPPewa FALLS, WIS.—A severe hailstorm damaged many greenhouses here April 4. The storm, however, broke the longest period of drought ever experienced in this section at this time of the year.

PORTLAND, ORE.—Clarke Bros say their sales at Easter this year showed an increase over those of last of about 30 per cent at prices about the same and plenty of stock. Easter lilies were most in demand as plants, though there was a fair call for azaleas, hydrangeas, roses, etc. The gardens around were full of bulbous stock, consequently these flowers were not wanted, but violets, roses, carnations and sweet peas sold out clean. The bright yet cool weather was the best that could have happened.

## ORCHID NOTES.

PLENTY of heat and a good light are necessary for *Dendrobium Phalaenopsis*.

KEEP *Cattleya Percivaliana* on the dry side after flowering and until the growth starts.

THE bright red flowers of *Epidendrum vitellinum* are among the showiest in the whole orchid family.

*EPIDENDRUM BICORNUTUM* is a difficult plant to grow but the flowers are among the most beautiful in this very extensive genus.

### *Dendrobium Phalaenopsis*.

Probably no other dendrobium is so largely grown by commercial growers for cutting as the giant moth dendrobe, *D. Phalaenopsis*. This is not to be wondered at, for it is certainly the finest of all in this extensive genus for the purpose. Nearly all the other species have to be cut with the stems and the plants are thereby injured, but with strong plants of *D. Phalaenopsis* the flower stems alone are long enough for all ordinary decorative purposes and these can be cut without weakening the plants. The stems of this plant, in fact, never should be cut off as long as they are plump, only when they shrivel, for they go on year after year producing flower stems that, though not so fine as the first season are still very useful for cutting. At a fair computation each strong stem of this dendrobium should produce a dozen flower spikes and this makes it a profitable subject to grow when the flowers are in demand.

The culture of *D. Phalaenopsis* is not difficult, but a few plants in a collection will almost invariably fail to do well. It is entirely in the atmospheric conditions that we go wrong with this plant. We can arrange for the rooting medium pretty easily. Water can be applied and heat is also easily managed, but there is something intangible always in the atmosphere of tropical countries where these orchids grow that cannot be reproduced in our orchid houses, and this is what the plants miss. It may be some gases from decaying vegetable matter that is missing or there are other elements that we cannot reproduce, though probably it is the constant and regular supply of fresh air that the plants miss, for this we cannot give and at the same time keep the atmosphere and temperature correct.

In the earlier days of orchid growing cultivators were in the habit of keeping their houses closely shut up, heavily shaded and reeking with moisture, and it is little wonder that in such temperatures the plants suffered, especially these beautiful dendrobies that grow naturally high up on trees fully exposed in many cases to God's sunshine and always to the full air. But a more sensible plan is now followed. Growers allow their plants as full exposure as possible under the artificial conditions forced upon them by circumstances. During late summer, when the conditions are favorable, the plants are given outdoor

treatment entirely to ripen and consolidate the growth, the only points necessary being to allow plenty of moisture in the atmosphere and just a slight shade to prevent the foliage burning up. *D. Phalaenopsis* usually makes the best of its growth in late summer, but should be let have its own way and never forced to grow when it seems inclined to rest, or vice versa.

ORCHIS.

### *Cattleya Labiata*.

The accompanying illustration of a house full of *Cattleya labiata* gives a good idea of how this plant is grown commercially by the large growers of cut flowers and there is no more useful species or variety for cutting than this. It flowers during the fall when other cattleyas and indeed orchids of all kinds are scarce and is one of the most free flowering and showiest kinds in existence. For many years *C. labiata*—the autumn flowering form—was very scarce in cultivation, it having been lost for many years, and collectors had almost despaired of ever finding it again. But during the last 15-20 years probably no other orchid has been so freely imported, its habitat having been discovered almost simultaneously by the collectors of several European houses. It is now the standard kind for cutting and one of the finest orchids in existence. Its culture has been frequently referred to in these columns.

### American Flag in Plants.

ED. AMERICAN FLORIST:—

Please give a list of the best flowering plants to make an American flag in bedding. Also a list of the best foliage plants for this purpose.

J. T.

## WITH THE GROWERS

Wictor Bros., Chicago.

Probably the one thing that strikes a practical grower most forcibly on visiting the Wictor Bros.' ranges north of Chicago just now is the magnificent lot of young stock in all varieties to be seen there. Not one, but all the varieties are represented by the finest and healthiest plants we have seen anywhere. Carnations have been rooted and potted and are now being topped and out of the many thousands of plants in each batch it would be difficult to pick out a poor specimen, so even and good are they. American Beauty roses again are elegant. There is one large batch already potted in 3½-inch pots for home planting and they are starting up and making grand healthy shoots with the utmost vigor. Smaller stock in 2½-inch is just as healthy and clean and growing just as strongly and these are all in preparation for the immense shipping trade that is done annually from these ranges. We have mentioned the Beauties specifically but they are typical of all the other varieties and it would be difficult indeed to find finer or more regular stock of Killarney, White Killarney, Mrs. Jardine, Bride Bridesmaid or any other popular kinds.

As in most other places the plantings of Bride and Bridesmaid are being considerably reduced here and 30,000 additional White Killarney and 15,000 Mrs. Jardine are to be planted to take their place in the houses that are to be rebuilt this season as noted in a recent issue. The material for this rebuilding has been obtained from the John C. Moninger Co. and is al-

GROUP OF *DENDROBIUM PHALAENOPSIS SCHRODERIANUM*.

As flowering plants for the stripes use *Begonia semperflorens luminosa* and *Erfordi alba*, the latter being also used for the stars. For the field use *Lobelia Crystal Palace* (blue). In foliage plants there is nothing in blue, so the lobelia should be used. For the stripes use red *alternantheras* and *Echeveria secunda glauca*; for the stars *Euonymus variegatus repens* or the *echeveria*.

ready on the ground and painted. The houses to be rebuilt are eight 250 feet long and three 125 feet. Among the most profitable kinds grown here is Mrs. Jardine. This is a grand winter rose, the growth keeping strong and clean and flowering well. During the heat of summer it is apt to fly open a little but not more so than other kinds and it is undoubtedly a coming rose, as the retailers like the color.

Rhea Reid has done much better here of late than in the earlier part of its career and although it has not yet been fully decided, the plantings of this variety will probably be increased this year. The early trouble was dropping of the foliage but the plants here now are leafy and green and in the best condition. Uncle John is grown in large numbers, also Kaiserin and these and all the other roses now in cut are healthy and producing well.

The young Beauties, that is the young stock planted last season, are doing well both as to growth and flower. They were run cool and with plenty of air last summer and they are now producing their fourth crop of flowers. It is worthy of note that old stock, both of this rose and three-year-old Killarney, have done remarkably well this season, better in some instances than the younger stock.

Very prominent among the carnations are Winsor, White Perfection and Victory. There are many others, of course, but these stand head and shoulders above them. The culture of Winsor is evidently well understood for we never saw better flowers or stems and the plants are remarkably healthy. Enchantress was good but the bright sun of the few days previous to our visit (it was 82° in the shade here the day we called) had taken some of the color out of the flowers. Victory was holding its color remarkably well and the flowers also stand up finely. Every flower we could see was perfect and there were no splits, the same being true of White Perfection. Flowers have been cut right along from this variety since Christmas and if the weather only keeps moderately cool they will evidently go on for a good deal longer, the plants being full of buds.

Already 250,000 chrysanthemums have been put in the sand and many of the earlier batches have been potted. Old stock plants are not relied on entirely here for cuttings, a number of plants being rooted in late fall and bedded out on a bench for stock. The herbaceous habit of the chrysanthemum is well shown here as these plants are pushing up fine, strong, basal shoots that are, as every grower knows, far better for propagating than top shoots and make sturdier stock. A list of all the varieties grown here would be far too long for us to give but we took notes of a few of the most prominent. For early yellows, Golden Glow and Monrovia lead, followed by Major Bonnaillon, Halliday, Golden Chadwick, Golden Beauty, Nagoya, Appleton, General Hutton, Golden Dome, Yellow Eaton and Golden Eagle. The early whites are October Frost, Polly Rose and Early Snow, followed by Kalb, Willowbrook, Touse, Virginia Poehlmann, Mrs. Buckbee, Ivory, Chadwick, Timothy Eaton, Yanoma, Merry Christmas and Snow Queen. Rosiere and Gloria are the early reds, Lady Harriet, Mme. Rosette, Dr. Enguehard, Maud Dean, Pink Ivory and Balfour following. Monogram, a variety that was tried out here some years ago and did not prove very satisfactory gave a better promise last year and will be more largely grown this season. In reds, the well known

Intensity and Black Hawk are the standbys and there are also large numbers of pompons grown.

### The Geo. M. Kellogg Flower and Plant Co.

Since the death of Geo. M. Kellogg, M. F. Parker has been president of the Geo. M. Kellogg Flower & Plant Co., Pleasant Hill, Mo., and is maintaining the business in a most up-to-date and successful manner. In this large area

## THE ROSE.

### Roses in in the South.

Roses, especially the teas, are assuming that jaded appearance which indicates that the hot weather is getting in its deadly work. Kaiserin, W. R. Smith and Beauty are still good and, if given continued good culture, will remain good for a long time. The plants on solid beds are easily showing

HOUSE OF CATTLEYA LABIATA AT SIEBRECHT & SONS, NEW ROCHELLE, N. Y.

of glass, which is wholly devoted to cut flowers and ferns are five American Beauty houses each 28x250 feet, which the trained eye of the visiting florist has frequently pointed out as being second to none. A visit to the houses gives an idea of the thrifty condition of the plants, which despite cold and cloudy weather, were in full bloom and bud, a most beautiful sight. J. C. Johnson has charge of the houses and besides Beauties as a specialty, 70,000 tea roses are grown, comprising all the new as well as the standard varieties. A large portion of glass is devoted to carnations, all of popular varieties including O. P. Bassett which promises a great future. 50,000 carnation plants are benched yearly.

Smilax and Asparagus plumosus are grown in large quantities, with 100,000 plants of various species of ferns, including the popular Kellogg fern, which is rapidly gaining favor and is grown more extensively each year. Approximately 100,000 bulbs are forced annually. Violets, cattleyas and azaleas are grown in proportion to the demand. This large range is divided into four growing sections with a foreman in charge of each. All these have been retained the same as under the old management. Plans are being made for extensive improvements on the already large range.

BOULDER, COLO.—C. F. Fawcett says his Easter sales this year were about the same as those of last and at similar prices. Azaleas were in short supply, also violets and roses. The outlook for spring trade is good and people here are going more largely into planting perennials and shrubbery of late.

their superiority over the ones on benches. For the south there is no question that solid beds are ideal quarters for roses. The plants need copious watering and syringing now, with a fertilizing stimulant at least once a week. Give all the ventilation possible during the day and leave plenty of air on at night to keep the circulation free.

There are two roses so eminently suited for summer blooming here that it seems sinful to have neglected so long. I refer to Maman Cochet and its white sport. Every grower ought to have at least one big house devoted to their culture. Such a house need not be strictly up-to-date and no heating pipes are required. Simply set the plants out in solid beds and give good culture all summer, and the returns will be surprisingly satisfactory. These roses do not go to pieces in hot weather, indeed, they seem to do better here than in the north. During the winter months the plants should be allowed to rest naturally. At the approach of spring trim them back a little, renew the surface of the beds and let them start growing slowly. Have just seen such a house planted with two-year-old plants in February, and already the second crop is well under way with ground shoots three feet long on every plant.

It is time now to prepare the soil for next planting. I described in these notes a few weeks ago a good method to prepare it. Different growers have different methods, but whichever method is adopted see that it is worked over occasionally. The young stock is growing fast now. Shift it on as fast as needed and by no means let it become so potbound as to get stunted.

WM. LEAR.

## THE CARNATION.

### Notes in Season.

Close attention to the needs of the young stock is an important part of the carnation grower's work at this time, the next three or four weeks—before planting out time—being a critical period. Any of the young plants needing larger pots should re-

The soil should be fresh and light, but not much added manure; a little to liven the soil up is beneficial, but enough to cause a rapid growth must be avoided. One part of well rotted manure to six or seven of fresh soil is about the right proportion. Three to 3½ inches of soil on the benches is plenty and the plants can be set about 3½ inches apart each way. After the first thorough watering in

under these conditions the flowers should be kept cut up close as quickly as they are developed and if any shortening of the supply is imperative it should be done by taking out some of the plants and using the space for other purposes rather than neglecting to keep the plants clear of flowers when ready. Plants that are in full crop carrying lots of flowers should be shaded a little, but where the crop is off and the plants are making new growth and can be given plenty of ventilation shading is not necessary until the crop is more developed. But in either case heavy shading should be avoided, because, should a change from bright to a cold, wet spell come, the heavy shading will do more harm than good. Fumigation to keep the plants free of insects is very important now as at all times. Attend to this at every favorable opportunity, for if this work is not attended to now when the nights are cool the fly will get ahead, and the time is at hand when favorable opportunities will be few and far between.

C. W. JOHNSON.

### To Be Done Now.

#### IN THE GREENHOUSES.

Pull out and destroy at once any diseased asters, as this may prevent the spread of the wilt to other plants. Take out a little of the surrounding soil on the benches before replanting.

Grow *Adiantum Farleyense* at about 65° by night when the plants are established. A higher temperature is all right for young stock not established, but leads to thin fronds of poor substance in older plants.

A little white arsenic mixed with sweetened bran makes a good trap for woodlice or sow bugs if laid about their haunts.

Keep poinsettias perfectly dry at the roots now until they are needed to start up for propagation.

When fumigating with hydro-cyanic acid gas the temperature in the house should never be above 60°.

Keep the young plants of *Begonia Gloire de Lorraine* well apart and give plenty of air. Do not attempt to force the growth yet.

INTERIOR OF MRS. I. HERBERT'S STORE AT WILKESBARRE, PA.

See Page 572.

ceive attention at once, but overpotting should be avoided. To allow a young carnation more soil space than it can take care of quickly is conducive to soft growth and stem rot. It is better to give the plants a little lower temperature and less water, provided the growths are not becoming woody, but any drying out in high temperatures and on hot, dry benches is detrimental. Topping back of the shoots should be carefully carried out right along, as the plants require it, but do not carry this to the extreme. Allow for growth enough to be able to make a clean stop between the axils of the leaves. Any cuttings still in the sand should be potted as soon as they have made sufficient roots. It is better to get these into the soil quicker than earlier in the season, or as soon as the roots will stand it, so as to give them a chance to get well rooted in the soil for planting out in the field. The check of transferring from the house to the field is not as severe if the plants are well rooted in pots before being set out.

The young stock for indoor summer culture now in 2¼ or 2½-inch pots can be transferred to benches any time the space is available. This does not mean to their permanent quarters, but as a method of carrying them along until the proper time of planting into the permanent quarters in June and it will be found to give better results and less trouble than to shift them into 4-inch pots and carry them along by that method. The one very important thing to bear in mind is to give them as light and airy a bench as possible, situated so that a cool temperature can be maintained.

water only when absolutely necessary, ventilate freely on all favorable occasions and pay close attention to keeping the insect pests in check.

There must not be any let up in the care of the blooming plants that are expected to do business for three or four months yet. Just at this time when the bright spring days are causing an abundance of every line of flowers the supply of carnations is likely to be greater than the demand and low prices will be the rule. But even

INTERIOR OF THE NEW STORE OF MRS. ELLA GRANT WILSON, CLEVELAND, O.

See Page 572.

Ring and moss any old plants of ficus that have no value as decorative plants, as the young stock will be useful in fall.

Watering with a solution of lime is the surest way of ridding pots of earth worms. These fill the drainage holes and are a great nuisance.

Muriate of potash is a cheaper fertilizer than sulphate of potash and equally as good as a stem stiffener for carnations.

Occasional spraying the young stock of chrysanthemums with Bordeaux mixture will keep rust in check.

Frequent and regular spraying with cold water during bright weather is the very best antidote for red spider.

#### OUTDOORS.

Aucubas, retinosporas, boxwoods and other semi-hardy shrubs are quite safe from this time on verandas and porches.

Level up inequalities on lawns and roll them regularly in order to get them down to a good surface before very dry weather sets in. Leave the edging until the sod is thoroughly solidified.

Prick out seedling pansies in a warm corner or in protectors and keep them well cultivated. Plant out those that are ready for the spring display.

Berberis mahonifolius is one of the best low growing shrubs to succeed in shady corners or under trees.

One part of cement to five of hard coal ashes makes a very good mixture for concrete blocks for ordinary walls or similar purposes.

Avoid sunscald in young seedling stock of any kind in frames by ventilating early in the evening and, when the weather is suitable, leaving air on all night.

Plant out incarvilleas and avoid injury to the foliage.

Bring out any dahlia roots still in store and if there is no room under glass to start them put them in a light, frost proof shed or frame and damp them over occasionally.

Keep shrub and tree roots covered until ready to plant. They must not be exposed to cold drying winds.

Do not let the fine weather delude you into planting out tender stock. There will be frost yet.

### European Horticulture.

FROM THE BRITISH TRADE PAPERS.

**Best Six Roses for General Use.**—I was asked recently by an amateur friend the names of the "best" six roses. His garden was small and his idea was to have a few varieties with several plants of each. They were to be scented, free-flowering over as long a period as possible that roses are obtainable outdoors, and also to be good wet weather blooms; one was to be a climber. Of course, it is impossible to pick out the best six for all soils and climates, but I venture to send you my selection for other readers to improve on—of course, bearing in mind the above restrictions, with as wide a color range as possible: G. Nabonnand, Marie van Houtte, General MacArthur, La France and Mme. Abel Chatenay, while the climber was Mme. Alfred Carriere. Certainly there are roses that beat the above selection on one point or another, but I think this selection cannot be beaten for all-round excellence.

**Floral Legacies.**—We have often lamented the loss to horticulture by the death of experts who, making no arrangements for the disposal of their collections, have thus doomed the gatherings of a lifetime to be scattered and lost. It is not always that a father has a son to follow in his floral footsteps, though sometimes we have met them, or have seen a daughter taking a pride in the favorites in

which her sire delighted, so keeping the stock together under loving cultivation. We have seen disposals of garden plants by far-sighted growers who could not anticipate the neglect of careless successors without making provision for the future disposal of their plants, whereby the whole would be kept intact, either by some like-minded friend or by some public body, as a botanic garden or a town park.

Gardening at the Japan-British Exhibition—The Japanese gardens at the Shepherd's Bush exhibition in London, Eng., are beginning to assume a very attractive appearance, and it is hoped that those portions of the grounds which are reserved for British horticulturists will be equally worthy of the inspection of visitors. A large portion of the available land has already been let, but there is still room for some more nurserymen and

The Late Mrs. Vesey.

seedsmen, who can obtain plots for the purpose of displaying their methods of cultivating farm and garden plants, shrubs, etc. The plans and arrangements, which can be obtained on application to the administration offices, Wood lane, Shepherd's Bush, in most respects follow the precedents of the Franco-British exhibition of 1908.

**Cut Flowers.**—Few persons seeing the consignments of cut flowers arriving at a city or large town pause to consider the vast amount needed to supply the wants of those able to gratify their taste for floral decorations. It seems that during the winter months there were despatched from Nice to the French capital 310,677 packages of flowers by post, these packages weighing from three to five kilogrammes, with the result that we have the total of 1,242,708 kilos, a kilogramme being 2 1-5 lbs. The other sources of the supply for the Paris market are:—Cannes, 233,962 packages; Hyeres, 179,796; Antibes, 110,416; Golfe-Juan-Vallauris, 44,264.

**Longevity of Fern-spores.**—The "Kew Bulletin of Miscellaneous Information," No. 10, contains an interesting note regarding the longevity of fern-spores. Some specimens of Cheilanthes Mysorensis were collected in southern China on October 28, 1899, and preserved as herbarium specimens. Spores taken from these and sown at Kew in March, 1908, have produced healthy plants which now bear fully developed fronds about nine inches long. It is stated that when the fronds of this fern are dried with-

out much pressure, the margins incurve greatly and serve as an additional protection to the spores.

### Statice Suworowi in Pots.

Statice Suworowi is a very distinct species, the flowers not being in paniculate or cymose clusters, as in most of the hardy and annual kinds, but in tail-like, graceful, bright rosy pink spikes. It is quite one of the best and most suitable of plants for pot cultivation for the greenhouse growing 18 inches high. All the statices are very beautiful free-flowering plants of easy culture in poor soils or dry situations, remaining a long time in bloom. The flowers, with the exception of those of S. Suworowi, are valuable when dried for bouquets, etc., and all are showy in beds or borders. The candelabra-formed S. Suworowi is one of the finest of the annual statices. The plants may be grown in beds in the open, but it well deserves the best treatment of pot cultivation.

## OBITUARY.

### Mrs. W. J. Vesey.

A sudden attack of heart disease while riding on a street car on Broadway, Fort Wayne, Ind., caused the death of Mrs. W. J. Vesey of that city, at the age of 47. Mrs. Vesey was the wife of Judge Vesey and was a prominent and skilled florist, running, with her husband, the well known establishment of W. J. & M. S. Vesey. The greenhouse plant consists of over 150,000 feet of glass and much of the success of the business was due to Mrs. Vesey's initiative and skill. The excellent stock grown here has been exhibited all over the United States and has received recognition wherever shown besides having a good name and a large sale on all the principal local markets. Mrs. Vesey was born in Decatur, Ind., a daughter of Judge Studebaker, and was educated there and at the Fort Wayne college. She was married to Judge Vesey July 25, 1882, and six children were born of the union, all of them as well as the husband and father, surviving. It is thought that Mrs. Vesey hurried to catch the car and this might have hastened her death, though for some considerable time she had suffered from the heart trouble that caused her death. She was taken ill immediately she entered the car and was taken into a nearby drug store where she died almost at once. Although her friends had known of her illness, they were greatly shocked by the news of her sudden death and the utmost sympathy is felt for Judge Vesey and the family in their sad bereavement.

The funeral took place April 12 and there was a great throng of the local friends of the family in attendance. The out-of-town trade was represented by W. N. Rudd and Geo. Asmus, Chicago; Miss Meinhardt, St. Louis; and C. H. Maynard and wife, Detroit. The floral offerings, from friends in all sections of the country, were very numerous and elaborate.

**HOMESTEAD, PA.**—W. D. Faulk will move to the corner of Eighth avenue and Amity street.

**BALLSTON SPA, N. Y.**—Richard Schafer, who has been at the High street greenhouses nearly 15 years has decided to erect greenhouses on Church avenue.

THERE is some talk of an international flower show to be held in London, Eng., in 1912.

IN the death of Mrs. Vesey, the trade loses one of its most amiable and accomplished women.

THE president of the Society of American Florists should set the dates for Easter and Memorial day.

CLAIMING that the prices of flowers have been "boosted" about Memorial day the local G. A. R. posts have been requested by Adj. Brauff to consider artificial flowers for the exercises this year, according to the Franklin (Pa.) Herald.

AID the experiment stations in securing appropriations for work in floriculture and then help in the expending of them advantageously.

THE effect of the very early season on both the seed and nursery trade is yet to be seen on the florists' bedding trade. It is believed that the two former have been much shortened and the volume of the trade lessened considerably by the unseasonable weather.

OWING to the reduction of duty on unenumerated articles entering Canada, cut flowers from the United States will be dutiable at 17½ per cent ad valorem instead of 20 per cent as formerly. Palms, pepper, tomato plants and other horticultural products will also probably be affected.

IT may be taken as a healthy sign of the times in things floricultural that, according to the New York Times of March 29, a petition in bankruptcy has been filed against Fernand Dreyfus, manufacturer of artificial flowers in that city. Mr. Dreyfus may now be able to turn his attention to the production of real flowers.

WE have received the "Proceedings of the Nineteenth Annual Meeting of the American Carnation Society, a book of 94 pages, containing a full report of the proceedings and officers elected at the annual meeting held at Pittsburg, Pa., January 26-27, 1910. Lists of carnations registered and members and life members are appended.

"BOTANIC EXHIBIT of Native and Exotic Plants Growing in the Open in and about Pasadena and Los Angeles" is the title of a long list of plants collected and catalogued by P. D. Barnhart, editor of the "Pacific Garden." It will be especially interesting to students of the flora of California. The list was shown at the exhibition of the Pasadena Gardeners' Association March 31 and April 1.

### Rhinebeck Violets.

Ten million violets were shipped to all parts of the country from Dutchess county, New York, the week before Easter. Most of these were grown at Rhinebeck, some growers shipping as many as 75,000 blooms a day. The work of getting the flowers ready for market required nearly 1,000 people and many places worked day and night shifts. School was closed the whole week so the children could assist. Last year 2,802 boxes of violets were shipped from this place and it is expected that these figures will be exceeded this year.—Poughkeepsie Star.

### Cutting Off Peony Stems.

ED. AMERICAN FLORIST:

WE have quite a large peony garden and want to know if, after we cut the blooms from the bed, it will injure the roots to cut off the stems that remain and plant China asters between the rows. We will appreciate any information you can give us on the subject.

B.

WE would certainly not advise cutting off the stems of the herbaceous peonies. If they are planted at say three feet apart in the rows and the

rows four feet apart a line or two of asters may be planted between every other row, though we hardly advise it as peonies can make use of all the soil and the space between is necessary for cutting the flowers and manipulation. But in any case leave the peony stems to mature and fall naturally. It is a necessary process for returning to the roots, the sap elaborated by the leaves and, unless it is given its natural course, the roots are weakened.

### Muriate Versus Sulphate of Potash.

ED. AMERICAN FLORIST:—

PLEASE tell me through your columns which is the better form in which to supply potash in mixing soil for roses, muriate or sulphate of potash? I propose to use bone meal and stable manure in connection with it.

J. B.

I believe that there have been no definite tests as to the comparative merits of the muriate and the sulphate of potash for roses under glass. Tests of the two substances on farm crops have shown that the muriate is a little the better for some crops, while for others it has been shown to be harmful. On form the writer would be inclined to use the sulphate in preference to the muriate. Some soils, however, do not need potash at all, and the addition of potash to such soils is useless or worse than useless.

It would be advisable for "J. B." to make a test for himself; he might take one bench which is to be planted all to one variety of roses, use muriate on part of the bench, sulphate on another part, wood ashes on another part, and leave still another part without any potash at all. One year's experiment of this kind would show him definitely what his soil needs. It should be borne in mind that all of these substances are more or less caustic and should be mixed with the soil some time in advance of the planting, or if they are mixed in at the time the soil is placed in the benches, the planting should be delayed for 10 days. In the meantime the soil should have a couple of good waterings, so that the caustic condition may be done away with. It should also be noted that wood ashes contain a large percentage of lime in a very available form and the apparent superiority of the wood ashes over the other forms early in the season may be due to the action of the lime on the other manure in the soil. Lime tends to set the nitrogen free and to make the insoluble forms of fertilizers more soluble.

If "J. B." has reason to believe that his soil is one benefited by lime, a little lime may be added to the soil which has the muriate and the sulphate, and in that event the three forms of potash would be more definitely comparable. It should always be borne in mind that good results do not come from commercial fertilizers except in soils that are abundantly supplied with humus. However, the stable manure which he proposes to use, if applied in ordinary quantities will answer every purpose. Both the muriate and the sulphate contain large quantities of potash, and great caution must be used not to over feed with them.

W. N. RUDD.

## Meetings Next Week.

**Boston, Mass., April 19.**—Gardeners' and Florists' Club of Boston, Horticultural Hall.

**Detroit, Mich., April 18, 8 p. m.**—Detroit Florists' Club, Cowie building, 42-44 Gratiot avenue.

# Ready With the Finest Lot of Palms We've Ever Put Out.

You have probably never seen a more handsome collection of Palms than we are offering this season—grown right here from seed in our houses by men who make that their business. Even with our past experience as Palm growers, we feel that we have made a new record with our present stock.

You will get better satisfaction—better service—from our Palms

than from most others you can secure. They are of the best quality obtainable; our large customers—purchasers who demand and pay for the best—come back to us, year after year, for their extensive stocks. Our Palms are all home-grown; they are clean, thrifty, vigorous, and are worth more, plant for plant, than foreign grown Palms of equal size; our cost no more than imported plants, as the following prices will prove:

### Areca Lutescens

6-in. pot, 3 plants in pot, 26 to 28 in. high.....\$1.00 each  
7-in. pot, 3 plants in pot, 30 to 32 in. high.....\$2.00 each  
8-in. pot, 3 plants in pot, 36 in. high.....\$2.50 each  
8-in. pot, 3 plants in pot, 42 in. high.....\$3.00 each

### Cocos Weddelliana

2½ in. pot, 8 to 10-in. high.....100, \$10.00

### Kentia Belmoreana

5-in. pot, 6 to 7 leaves, 18-in. high, doz., \$6.00 100, \$50.00  
5-in. pot, 6 to 7 leaves, 20-in. high, doz., \$9.00 100, \$70.00  
6-in. pot, 6 to 7 leaves, 22 to 24-in. high.....each \$1.10 doz. \$12.00

### Kentia Belmoreana

7 in. pot or tub, 6 to 7 leaves 32 to 34-in. high each \$2.00 doz. \$24.00  
9-in. tub, 6 to 7 leaves, 5-ft. high, each \$7.50 and \$8.00

### Made-up Kentia Forsteriana

7 in. pot or tub, 4 plants in pot, 36-in. high.....each \$2.50  
9-in. tub, 4 plants in tub, 42 to 48 in. high.....each \$4.00  
12-in. tub, 4 plants in tub, 6-ft. high.....each \$15.00

### Phoenix Roebelenii

5-in. pots, nicely characterized, each \$1.00  
6 in. pots, nicely characterized, each \$1.50

We are already booking large orders and are now in excellent shape to give the best possible attention to your wants. Can ship anywhere by freight with perfect security.

Write for full particulars, with prices; or, if possible, call and inspect our stock. We are easily reached from Philadelphia and you will find a trip to our plant decidedly interesting. Let's get better acquainted.

**Wyncote, Pa.**

# ROSES

## For Decoration Day

Roses always sell well on Decoration Day. Potted NOW, they will be in good time for this important event.

Mr. Florist:—Our stock is in grand condition, the quality the best, true to name and in fine dormant condition. ORDER TODAY AND BE ON TIME.

### Hardy Hybrid Roses

We offer extra strong forcing two-year-old dormant, low budded stock, in the following varieties, true to name.

Price, 75c for 5 (of one variety), \$12.00 per 100; \$110.00 per 1000 (immediate delivery).

Abel Carriere. Crimson.  
Alfred Colomb. Carmine-crimson.  
Anne de Diesbach. Bright carmine.  
Ball of Snow (Boule de Neige). Pure white.  
Baron de Bonstetten. Blackish crimson.  
Baroness Rothschild. Satiny pink.  
Capt. Christy. Flesh color  
Clio. Satin blush.  
Duke of Connaught. Rosy crimson.  
Duke of Edinburgh. Bright vermilion.  
Eugene Verdier. Crimson-violet.  
Fisher Holmes. Dark crimson.  
Frau Karl Druschki. The finest white.  
Gloire de Margottin. Dazzling red.  
Gen. Jacqueminot. Brilliant crimson.  
John Hopper. Bright rose.  
La France. Pink.  
Mme. Charles Woo. Bright carmine.  
Margaret Dickson. White, with pale flesh.  
Marshall P. Wilder. Cherry-rose.  
Magna Charta. Dark pink.  
Mme. Gabriel Luizet. Satiny pink.  
Mrs. John Laing. Satiny pink.  
Paul Neyron. Dark pink.  
Perle des Blanches. White.  
Persian Yellow. Yellow.  
Prince Camille de Rohan. Dark crimson.  
Ulrich Brunner. Cherry-red.

For prices see above

Also we have on hand a very fine collection of Hybrid Teas, Everblooming Roses, such as Killarney, Cochet, pink and white, Kaiserin, etc.

Prices upon application.

### Ramblers and Other Climbing Roses

CRIMSON RAMBLER. American Grown. The only stock for forcing. Large heavy plants, two years old, mossed and packed in bundles of 10, 3 to 4 feet, \$1.25 for 10, \$12.00 per 100; 4 to 5 feet, \$1.75 for 10, \$15.00 per 100; 5 to 6 feet, extra heavy, \$2.25 for 10; \$20.00 per 100.

PAUL'S CARMINE PILLAR. Flowers large and free; color rosy carmine. Two-year-old, field grown. 85c. for 5, \$15.00 per 100.

DOROTHY PERKINS. Lovely shell-pink color. \$1.25 for 10, \$12.00 per 100.

TAUSENDSCHON. The new Rambler Rose. The name translated means a "thousand beauties." Color beautiful rose shading to pink. \$2.25 for 10, \$20.00 per 100.

### Flower of Fairfield The Everblooming Crimson Rambler.

This variety is a sport from the beautiful Crimson Rambler, is similar in color, more brilliant and lasting than the old favorite. It also possesses the further advantage over the Crimson Rambler in the fact that it flowers profusely on the young wood the first year. Flower of Fairfield is a vigorous grower and free bloomer. It starts to bloom early in the Spring and continues until late in the Autumn. It is rightly termed "perpetual blooming." 40c. each, \$3.50 for 10, \$30.00 per 100.

### Veilchenblau (Violet Blue.)

It has long been the desire of rosarians to secure a blue Rose. In Veilchenblau we have practically approached this color. The steel-blue flowers of this new Rose appear in large clusters are semi-double, of medium size and keep in bloom a long time. The showy yellow stamens contrasting with the blue flower, give the whole a striking appearance. 60c. each, \$5.75 for 10, \$55.00 per 100.

### Baby Rambler Roses

BABY DOROTHY. The same in habit as Baby Rambler, but the color of the flowers is similar to Dorothy Perkins. It makes an excellent pot plant for forcing. Price for strong, field-grown plants, 85c. for 5, \$16.00 per 100.

CATHERINE SEIMETH. A White Baby Rambler Rose, larger and better flowers than the type. White with yellowish center. 85c. for 5, \$15.00 per 100.

MRS. WM. H. CUTBUSH. Color intense crimson and exceptionally free-flowering. 85c. for 5, \$15.00 per 100.

MME. NORBERT LEVAVASSEUR (Baby Rambler). Strong, field-grown plants, 85c. for 5, \$15.00 per 100.

THE TREE BABY RAMBLER. (Grown as a Standard.) The popularity of the Baby Rambler has suggested the growing of it as a tree or standard. 40c. each, \$3.75 for 10, \$35.00 per 100.

BABY DOROTHY. (Grown as a Standard.) For description, see above. 75c. each, \$6.25 for 10, \$60.00 per 100.

We also have a fine stock of Hybrids and Hybrid Teas, standard grown.

### Something New in Roses for Florists Half Standard Baby Ramblers.

These are Baby Ramblers, grown on stems or standards about one and one half feet high, and will be a novelty for your trade you cannot profitably overlook. They are offered for the first time in this country in the following varieties:

BABY DOROTHY (Half standard).. Deep pink. 60c. each, \$6.00 per doz., \$45.00 per 100.

BABY RAMBLER (Half standard). Crimson. 45c. each, \$4.50 per doz., \$35.00 per 100.

BABY CATHERINE SEIMETH (Half standard). White. 45c. each, \$4.50 per doz., \$35.00 per 100.

BABY "STARS AND STRIPES" (Half standard). White and red grafted on the same plant; most attractive. 50c. each, \$5.00 per doz., \$40.00 per 100.

#### LESS STOCK BUT POOR PRICES.

As we anticipated in this column last week the arrivals of stock fell off considerably around the week end but so far from improving the prices they were even lower on Friday than earlier in the week, especially on roses. Carnations sold fairly well but the prices obtained were so ridiculously low that the growers must be heartily sick of sending flowers to this market. However, there is every reason to hope for better things in the near future. More and more growers are throwing out their stock and the matter of supply and demand will surely adjust itself before long. Probably outdoor stock will be shorter in a little while for the local and southern daffodils and tulips are almost overlapping and the dry state of the soil will make the season short in both places. We noted on Friday a few flowers of the little red moss-leaved peony (*P. tenuifolia*) just about 15 days earlier than it appeared last year, and as this usually beats the standard early varieties by only a week or 10 days it looks as though we may be in the thick of the peony season before long—and after that summer flowers and summer conditions. The flowers in question came from the southern part of the state.

On Monday morning the arrivals of stock were considerably less than usual and several houses were sold out clean of carnations, good, bad and indifferent, by noon. Trade, however, continued dull in the extreme, more especially with city buyers, but the cooler weather helped the shipping trade some. The few cool days have given more substance to the roses, especially Killarney, which is more solid and heavier now than it has been for the last few weeks. The supply of American Beauty is not so heavy, as it was especially in the longer stemmed, better grades. Kaiserin is becoming a little more plentiful, but the time for this rose is not yet. Mrs. Marshall Field is also in good form and will probably be more seen during the next three or four months. My Maryland looks like becoming an elegant summer rose, the recent warm spell apparently increasing its size and beauty instead of diminishing it as with some other kinds. Sweet peas are not nearly as plentiful as they were and the quality is not so good, but this is probably only a temporary scarcity.

## "The Busiest House in Chicago"

WE care not who it is or what they want in the CUT FLOWER LINE we have it and want to sell it to you.

**J. B. DEAMUD CO.**

**51-53 Wabash Ave.,**

**CHICAGO**

Lily of the valley is better and more plentiful. Bulb stock is still above the demand. Cattleyas are scarce and probably will be until C. Mossie comes in. There is a brisk demand for the few that are arriving by the best class of retailers.

#### FLOWERS OF 1909 AND 1910.

The year 1910 has been one of surprises in the cut flower business. Probably there never was such a scarcity of roses during January and February as this year and the prices soared out of all reason. Then followed a glut which has also been of an almost unprecedented character and now come some record breaking dates for the arrival of various stocks from outdoors. The winter was cold and fairly long continued, but when it let up it did so with a snap and everything in the way of vegetation came away very rapidly, many of the flowers being nearly a month in advance of last year. Strange to say the bulbous stock from the south was not affected so much as some other things. The earliest daffodils came in almost the same day as last year, but these too came with a rush when they did come and the bulk was in well ahead of that of last year's crop.

Peonies are not in yet, that is, the ordinary cut flower varieties, though the pretty little moss-leaved variety—*Peonia tenuifolia*, has been seen. A well known firm that handles immense quantities of peonies states that its growers say their flowers will be at least three weeks ahead of a normal season and this looks as though there was trouble ahead for the growers for

the flowers will probably be soft and not of the kind that keep well, while the local crops will probably be in about the time the southern stock usually arrives. Lilac, again, from the south arrived here 26 days earlier than it did last year. In the principal parks last year many lilacs were still in excellent condition on Memorial day. This year the flowers are already showing color and a week or 10 days at the most of warm weather would bring the flowers fully out. F. F. Benthley, one of the most experienced men in the wholesale market, says that the season is quite a month earlier than last year, though he points out that 1909 was a little on the late side. This is exactly brought out in the case of the bridal wreath. Kennicott Bros. received their first shipments on May 12, in 1909. This year they came to hand on April 11. On April 2, we noted some elegant Keizerskroon tulips around the suburbs in sheltered positions fully out while this is recognized as a May flowering tulip everywhere. In the cemeteries tulips are now fully developed and the forsythias are over. Pear, apple and other fruit branches are already appearing in the stores, nearly a month earlier than usual.

#### NOTES.

E. C. Amling is receiving very fine American Beauty and Killarney roses and says his growers are just coming into crop with the former. A great variety of choice novelties and spring flowers are shown here, some excellent yellow marguerites being especially worthy of note. We noticed

some flowers of the moss-leaved peony here this week from southern Illinois. They arrived on April 5 this year, April 15 being the date of arrival last year.

The regular meeting of the Florists' Club was held at the Union restaurant April 7, President Asmus in the chair with Vice-President Philpott of Winnipeg, Manitoba, on his left. A number of committees presented reports and Joseph Straus was admitted to membership. Alexandre Aurele Vermeulen, with Swain Nelson & Sons Co., 940 Marquette building, was proposed for membership. Geo. Asmus having stated that he had been strongly urged to become a candidate for one of the vacancies on the state board of agriculture, the club indorsed him. Mr. Asmus suggested the name of Herman Schiller for one of the vacancies.

The Geo. Wittbold Co. has secured another 50 acres of land for nursery purposes at Edgebrook. The stock here came through the winter in remarkably good shape, a few rows of California privet and weigelas being the only things that were cut down. Louis Wittbold strongly advises the planting locally of the Amoor river privet in place of the California, it being much harder. Trade at the two retail stores is reported as very good and we noted at the Buckingham place store some very pretty arrangements of daffodils in glass.

Bassett & Washburn's stock of American Beauty is still large and grand flowers are arriving daily though they are shortening up a little from last week. The plants for summer are coming along in great shape and the supply will be large. Kaiserin is also doing well, the plants making

fine shoots and full of vigor. Although there will probably be some before, the bulk of the flowers of this fine rose will begin to arrive about May 1, and will go on all through the hot months.

Hoerber Bros. are busy with their new greenhouses at Desplaines, long lines of posts being already in position to carry the gutters which will be Garland's throughout. Moninger material is being used. The stock in the greenhouses looks fine and the quality of both carnations and roses being sent to the store is excellent. No roses will be thrown out this season with the exception of a few Brides-maids.

The J. B. Deamud Co. has been well in the lead with southern lilac, the shipments of fine fresh stock arriving daily. Carnations of excellent quality are shown but clean up daily.

# BEAUTIES AT THEIR BEST

## A Large Supply Now In

Our growers have just commenced cutting another elegant crop of Beauties. We shall have them, whether they are procurable elsewhere or not. Stock generally is shortening up this week, but our prices are unchanged as yet. Get acquainted with us, and we will keep you posted.

# VAUGHAN & SPERRY

Long Distance Phone,  
Central 2571.

52-54 Wabash Ave., CHICAGO

The formal opening of the new Blackstone hotel does not take place until Saturday, but there have been several more or less informal receptions at which John Mangel, who will have the flower store here, had the decorations. One to the hotel men of the east, on their way to the coast, consisted of long-stemmed Beauties and palms. The Commercial club held a reception and first dinner, at which 250 sat down, and here again Beauties were the principal decorations. On Sunday, Mrs. Drake gave a family dinner for 15. The tables were decorated in French style with blue and pink hydrangeas, the ladies having gardenias for corsage bouquets, the men white carnations, the children having sweet peas and daisies as souvenirs.

There was considerable rejoicing at the Bassett & Washburn store on Tuesday when a telegram arrived from Ned Washburn in California, saying that he had been examined by Dr. Bridge, who had made a test for signs of tuberculosis and after 48 hours had failed to find the slightest trace of tuberculin, all having disappeared. His lungs are entirely healthy and all that is now necessary to restore him to complete health is for him to be careful and not overdo any exercise. Naturally Mr. Washburn and everyone around the establishment were elated at the good news.

The regular quarterly meeting of the Horticultural Society was held at the Art Institute April 12, Vice-President Wienhoeber in the chair. The announcement of President Kelley's serious illness in Florida gave a deep tone of sadness to the proceedings, however, which were curtailed to strict routine, the president being beloved for his enthusiasm and kindness.

Vaughan & Sperry certainly manage to hit the market lucky with Beauties. In several instances large growers are going off crop and many are being thrown out, but this firm's growers are just coming in with a magnificent crop of fine flowers. Good irises, Narcissus poeticus and excellent callas were also noted here this week.

Joe Dunn, who for 10 years has been grower at the J. A. Budlong range, leaves there shortly to take up the growing business for himself at Sturgis, Mich. Joe is a thorough grower and will doubtless succeed and Mr. Budlong is sorry to lose the services of such an efficient man.

At the Budlong range considerable of the rose stock has been thrown out and replanting is going on rapidly.

But the benches remaining are in fine order and excellent stock of roses and carnations are being sent in to the store.

Norris F. Comley of the Lexington Nurseries, Lexington, Mass., has been in town during the week buying up carnation cuttings and plants for his own growing. He visited among other places Poehlmann Bros. Co.'s at Morton Grove, and the Joliet growers.

Uncle John, My Maryland and American Beauty roses are strong specials with Peter Reinberg this week, these being in especially good condition. Immense quantities of stock in all lines are arriving and the shipping trade keeps up well.

Work on the alterations and improvements at the Flower Grower's Market will be commenced shortly. New elevators will be provided and two staircases and the floor will be much more convenient.

Mrs. J. B. Brooks' 12-year-old son, who it was feared would lose his leg as the result of an accident, is now in no danger of this calamity. They hope to have him out of the hospital next week.

Ole Johnson, recently with the Chicago Rose Co., has started in for himself with a stand on the Flower Growers' Market. He commenced business on Saturday and is well satisfied with the start.

Sinner Bros. are throwing out some of their roses, including many Brides and Bridesmaids which will not be replanted. The stock all looks fine this cool weather and there is no trace of mildew.

Luke Collins, at the Parkside Greenhouses, has a fine lot of pink sweet peas in just now and his pansies, of which he makes a specialty, are unusually good this year.

Mrs. F. Beu is showing good Kaiserin roses. There are two houses doing fine and the first flowers were cut on Palm Sunday. Pansies are exceptionally good this year.

H. M. Hooker, of the H. M. Hooker Co., well-known dealers in greenhouse glass, contributed \$3,000 to the local Y. M. C. A. in its recent campaign for funds.

John Kruchten was on hand again on Saturday after a week's siege of tonsillitis which kept him at home. The flowers here are excellent and business fair.

Arthur Schutz, alderman florist of Hammond, Ind., has returned from the Indianapolis convention and reports business as excellent.

Kennicott Bros. are handling large quantities of fine stock in all lines,

especially good bulb stock and mignonette being noted.

The Fleischman Floral Co. reports unusual activity in decorative work, while the cut flower business is also good.

Zech and Mann are handling large quantities of roses, extra fine Killarney being a leader.

Vaughan's bay trees are enroute from New York and will be on view next week.

J. B. Deamud is making a business trip east.

Visitors: H. E. Philpott, Winnipeg, Man.; Norris F. Comley, Lexington, Mass.; J. W. Davis, Davenport, Ia.; J. J. Karins, representing H. A. Dreer, Inc., Philadelphia.

### BOWLING.

#### Standing of the Teams.

|                 | W. | L. | Pct. |
|-----------------|----|----|------|
| Carnations..... | 43 | 32 | .573 |
| Violets.....    | 42 | 33 | .560 |
| Orchids.....    | 36 | 39 | .480 |
| Roses.....      | 28 | 47 | .373 |

There was a double header on Thursday at the Bensinger's alleys, the Orchids losing two games to the Carnations, the Violets winning two from the Roses. John Zech improved his position considerably for the Deamud cup. Thursday in the present week will be the last night of the schedule, 81 games having been rolled in all. F. J. Pasternick, secretary of the league, hopes to see as many as possible on this occasion to see the finish. The scores follow:

#### First Game.

| Carnations— |     |     |     | Violets—    |     |     |     |

Wholesale Growers and Shippers of Cut Flowers.

Boston.

A QUIET WEEK.

Another quiet week, with plenty of stock to meet all demands. Violets are shortening up perceptibly. There are some doubles of very good quality still to be had. Lilies of all kinds are coming in freely, some especially good Candidums being amongst them. Carnations are coming in rather heavy, but seem to sell well. Roses of all varieties are plentiful and going slow. My Maryland is coming in extremely freely and is offered at most attractive prices. American Beauty is plentiful and of splendid quality. Prices are down. Snapdragon is coming in freely. Good pink, yellow, white and red are recognized as standard colors and they generally sell fairly well. Bulbous stock is plentiful, Victorias and Golden Spurs being the best sellers. Gardenias are coming in far too freely for the demand. Some splendid flowers are coming in from out of town and the price is lower than ever for similar grades of stock. Valley is going a little slow, but will probably do better shortly, as many weddings are scheduled for early dates. Orchids are still a little scarce, the local growers being off crop. Interest is keen in the big orchid show soon to be held in the city. It promises to be the biggest thing of the kind ever held in this country. Pansies, primroses, mignonette, etc., are all plentiful. Iris of various colors are coming in more freely and are popular. Sweet peas are extremely plentiful, but are selling well. As the violets drop off, peas come to the front. Green goods are coming in more plentifully, especially Asparagus Sprengeri.

NOTES.

Pierce Bros.' big automobile got a little cranky the other day on the way home from market. The steering gear refused to work and the car skidded and ran into the fence on Boston common. A few pickets were broken, but no serious damage was done to the machine or occupants.

Paine Bros., Randolph, are bringing in some fine iris. This is an extremely popular flower and the grower who

### Wholesale Cut Flowers

#### Everything Seasonable

Headquarters for Ferns, Galax, Leucothoe and Wild Smilax, and carry a large supply of the best on hand at all times. We quote the following interesting prices on small or large quantities.

**Ferns**, fancy and daggers, \$1.25 per 1000  
**Galax**, green and bronze 65c per 1000.  
**Leucothoe**, green and bronze 65c per 100.  
**Wild Smilax**, large cases, \$4.50 per case.

15 Diamond Square, PITTSBURG, PA.

#### Philadelphia.

#### MARKET OVERLOADED.

The market is still greatly overstocked, the continued warm weather bringing in all the varieties of flowers, both inside and out, at a rapid rate. These, coupled with a light demand, add to the troubles of the grower and wholesale dealer. The retailer can regulate his supply, but the wholesale dealers have to take what comes in and make the best of it. With every jar and pot full of stock and their cooling rooms crowded to the doors there is no wonder that the wagon loads of boxes that draw up to their doors are viewed with dismay. With the street men working overtime and the greatest inducements offered to the stores, it still appears impossible to keep the stock moving with any kind of reasonable dispatch. The quality for the most part is first class, and while there is a kind of demand for necessary store stock and a light shipping trade, the prices obtained, particularly in quantities, is not worth quoting. The season is fully three weeks ahead of normal conditions, and should this state of affairs continue, there will be no peonies for Decoration day, and instead of supplying the Boston market, as is usual, this city will have to draw on its surplus at this time. The bedding plant men have commenced to send out geraniums for planting, many people taking the risk, as they believe that spring has set in and that they have seen the last of the cold weather, or at least killing frosts. Particularly is this true of window boxes, which are seen on many of the streets. For some reason the box trees kept very poorly the past winter and in nearly every instance are dead; on sunny or shady sides of the street the result is the same, all plants dead.

#### NOTES.

Mothers' Day promises to become more popular as the real significance of the celebration is understood. This will be the fifth year of the observance. The first and second year but few flowers were worn, as it takes time to make any custom popular; no matter how much it appeals to the individual, the public must first learn of it. The third year, from hundreds, the numbers of those who wore flowers mounted into the thousands, and last year the happy thought spread a thousand miles, and in this city and the surrounding towns every white carnation was sold at a premium, many flowers towards the

last bringing the highest holiday prices. This season orders are already being placed for white carnations and the demand will, it is believed, spread into every neighborhood where the knowledge of the beautiful custom can be

made known. Love and adoration for one's mother is universal, the very best mother in the land, and this custom of honoring her by wearing a flower on a day set apart will, we believe, become, or can be made, one of the most popular of all days on which flowers are a feature.

"Slow" Philadelphia, or rather the enterprising florists' supply men of this city have been stirring up Boston and corraling large orders in that learned city the past week or two. First it was M. Rice & Co. and then H. Bayersdorfer & Co., who sent their best men and who, we are told, had all they could do to "write 'em down," so fast did the orders come in. Great preparations are being made for Decoration day business which, with or without the florists' help, is one of the greatest floral fetes of the year in that city.

The H. A. Dreer Co. has had a great run on box (the past month, and is completely sold out of all the small and medium sizes. Business at this great establishment is in full swing, all kinds of hardy and herbaceous stock moving off in large quantities and orders are coming in such quantities that a record-breaking business is assured.

Niessen's market is a busy place these mornings. An immense quantity of stock is moved early in the day. The coolest man in the place is Captain Leo, who is always on the job. We question if there is another business in the country of such magnitude that is managed with less friction. K.

MONTVALE, MASS.—Mrs. David Fisher has sold her greenhouse plant on Hill street to Flood, who will continue the business.

NEW YORK.—Dr. N. L. Britton, director of the Botanical Gardens, returned April 5 from a six-week excursion into the Cuban mountain wilderness in search of specimens.

## New York.

## TRADE QUIET.

The weather of the past week was cooler, but there was little appreciable decrease in the volume of cut stock arriving in this market. There was a somewhat better movement on Saturday, but no increase in prices. The situation is bad, but growing hysterical or throwing fits will not improve it. The remarkable weather conditions of March cut two ways to the disadvantage of business. It brought in an enormous supply of stock and took many people out of the city. With weather favorable for autoing and other forms of outdoor amusement, the wealthy and care-free citizens usually make the most of it, and not only florists but other tradesmen suffer. It is true that in a great city like this there is always a demand for flowers and always something doing, but of late the demand has fallen greatly below the supply. But, we take an optimistic view of the situation and believe that in a short time conditions will improve.

April 11.—There is a slight improvement in the condition of the market this morning, due to cool weather and a lighter supply of stock. It is impossible to furnish quotations on lilac, of which there is now an abundant supply, as no two dealers bunch it in the same way. It is possible to buy a big bunch for 25 cents.

## NOTES.

Miss Susanna Lustgarten, 19 years old, the only child of Charles and Isabelle Lustgarten, of Elmhurst, L. I., died in the Brooklyn hospital on the morning of April 9. Her death was caused by burns received the previous evening at a merrymaking by the girls of Adelphi college, Brooklyn, of which she was a student. One of the features of the entertainment was a ghost dance, in which the girls danced around a purple light, made by burning alcohol and table salt in a dish. It is said that Miss Lustgarten poured alcohol from a bottle into the dish while the fire was still burning, and there was an immediate explosion which set her light clothing on fire. Before it could be extinguished she was fatally burned. There is widespread sympathy for the bereaved parents, who are well known growers of Elmhurst, and familiar figures in the New York Cut Flower Exchange, where they sell their stock. Both have always been very hard workers, their great ambition having been to give their daughter a good education and a good start in life. Last summer, mother and daughter made an extended tour of Europe.

Ford Bros., 48 West Twenty-eighth street, recently took a lease on the Manhattan Flower Market, 46 West Twenty-eighth street. Before they had time to move they received and accepted an offer of \$10,000 for their lease, as the building is to come down to make room for a more pretentious structure. In these days of depression that is a faster way of making money than by selling flowers. It is understood that all the buildings from 44 to 50 West Twenty-eighth street, on the even-numbered side, will soon be torn down, and there are other prospective changes.

The funeral of Mrs. Geo. M. Stumpp was held at the family home, 65 East Ninety-first street, on the afternoon of April 7. There were services at the Episcopal church and many beautiful floral offerings. Interment was in Woodlawn cemetery.

From Hackensack, N. J., the death is reported of Mrs. Winnefeld, wife of the junior member of the firm of Lehigh & Winnefeld, plant growers and shippers to this market.

John W. Gibson, of Gibson Bros., Newport, R. I., was in the city April 8. He reports good Easter business and looks forward to a good season.

George Bradshaw has taken a position with J. K. Allen.

### New York Florists' Club.

The regular monthly meeting of the Florists' Club was held in the Grand Opera house on the night of April 11, with a good attendance. Walter F. Sheridan reported for the dinner committee and was tendered a vote of thanks for his able and effective work. Wm. H. Siebrecht, Jr., reported for the plant market committee, advancing a proposition for a plant market under the Manhattan approach of the new Queensborough bridge at Fifty-ninth street. There was a spirited discussion over this matter, in which Patrick O'Mara, F. R. Pierson, A. F. Faulkner, John Birnie, James Dean, John B. Nugent, Jr., Wm. Elliott and W. E. Marshall participated. Finally, on the motion of Chas. H. Totty, it was decided that the club endorse the proposition and ask the co-operation of members of the club and other interested societies. One speaker advanced the theory that the business of the city will soon be revolutionized. Another said that while that might be true, he believed that the change would come slowly, and that he thought that if any changes were to be made in the matter of selling plants and cut flowers they should be in methods and not in location.

M. McKerrick and Chas. McTaggart were elected members. G. A. Merritt, T. Maelstrom and J. A. Weis were proposed for membership. A communication was received from Hitchings & Co., the well known greenhouse builders, offering a silver cup for competition in exhibits. The offer was accepted and a vote of thanks tendered. It was voted that the club give hearty co-operation toward the passage of the bill now before the legislature for suitable greenhouses at Cornell University. President Pierson, of the S. A. F., spoke in reference to the next meeting at Rochester. He said that he hoped for and expected a great delegation from this city. The transportation committee follows: Frank Traendly, John Young, Harry Bunyard. Kessler Bros., 50 West Twenty-eighth street, exhibited their new fern. Louis Dupuy, Whitestone, N. Y., exhibited new types of hydrangeas. Mrs. A. M. Booth, Great Neck, (E. Fardel, gardener), exhibited anemones and stocks. All of the exhibitors spoke interestingly of their productions.

# APHINE

The practicability of spraying, compared to fumigating or vaporizing is being more generally recognized than heretofore among those engaged in floriculture and horticulture.

Spraying, when operated on scientific lines, is proving the most economical method of combating insect pests. Fumigation requires the filling of the house. Spraying requires application to that portion of the house only where the insects make their appearance.

Fumigation is not beneficial to flower or foliage. Spraying with Aphine does not affect them in the least, in fact, it invigorates the plants. Send for descriptive circular.

### Buffalo.

#### STOCK PLENTIFUL.

The weather is variable and stock plentiful. Killarney, Richmond and American Beauty roses are good. Carnations are plentiful, but not large. Violets are in over-supply and moving slowly. Some good gardenias and orchids are coming in, with fair sale. Valley is always salable. Flowering plants are scarce, a few hyacinths, hydrangeas and some fine calceolarias are all that can be had. Daffodils are in profusion, the warm spell last week bringing outdoor stock in almost as freely as indoor, the former only for a day or two. Bargain sales are still on the Saturday calendar.

The first meeting of the Florists' Club under the administration of President Streit was held last Tuesday. A fair attendance only, auditing of the last officers' books and reports of committees taking up all of the evening. Some talk was indulged in regarding a fall show, but no definite action taken.
